## Contents

1 Introduction ......................................................................................................................... 1
   1.1 Why Write a Book on Computer-Based Scaffolding in STEM Education? ......................... 1
   1.2 What This Book Covers ................................................................................................. 3
   1.3 Problem-Centered Instructional Approaches and STEM .................................................. 4
   1.4 Role of Scaffolding ....................................................................................................... 5
   1.5 Central Premises Behind This Book ............................................................................... 6
   1.6 Structure of the Book .................................................................................................... 8
   References .......................................................................................................................... 10

2 Instructional Scaffolding: Foundations and Evolving Definition ..................................... 17
   2.1 Historical Definition ...................................................................................................... 17
   2.2 Scaffolding Elements ................................................................................................. 19
      2.2.1 Dynamic Assessment ............................................................................................ 19
      2.2.2 Providing Just the Right Amount of Support ...................................................... 21
      2.2.3 Intersubjectivity ................................................................................................. 23
   2.3 Scaffolding Forms ........................................................................................................ 24
      2.3.1 One-to-One Scaffolding ...................................................................................... 24
      2.3.2 Peer Scaffolding ................................................................................................. 25
      2.3.3 Computer-Based Scaffolding ............................................................................ 26
   2.4 Considerations as the Instructional Scaffolding Metaphor was Applied to Computer Tools .................................................................................................................. 27
      2.4.1 Theoretical Bases of Computer-Based Scaffolding ............................................ 28
         2.4.1.1 Activity Theory ........................................................................................... 28
         2.4.1.2 ACT-R ......................................................................................................... 32
         2.4.1.3 Knowledge Integration ............................................................................... 36
         2.4.1.4 Comparison of Theoretical Foundations ..................................................... 39
      2.4.2 Design of Computer-Based Scaffolding ............................................................... 42
      2.4.3 Interplay Between Computer-Based and One-to-One Scaffolding ....................... 43
   References .......................................................................................................................... 44
3 Context of Use of Computer-Based Scaffolding ............................................. 55
  3.1 Rationale for this Chapter ........................................................................ 55
  3.2 Grade Level .............................................................................................. 57
    3.2.1 Results from the Meta-Analysis ....................................................... 58
  3.3 STEM Discipline ...................................................................................... 59
    3.3.1 Results from the Meta-Analysis ....................................................... 60
  3.4 Student Demographics ........................................................................... 60
    3.4.1 Results from the Meta-Analysis ....................................................... 61
  3.5 Instructional Model with Which Scaffolding is Used ............................. 62
    3.5.1 Problem-Based Learning .................................................................. 63
    3.5.2 Case-Based Learning ...................................................................... 64
    3.5.3 Design-Based Learning ................................................................... 65
    3.5.4 Inquiry-Based Learning ................................................................... 66
    3.5.5 Project-Based Learning ................................................................... 67
    3.5.6 Other Instructional Approaches ....................................................... 68
    3.5.7 Results from the Meta-Analysis ....................................................... 68
References ....................................................................................................... 70

4 Intended Learning Outcomes and Assessment of Computer-Based Scaffolding ......................................................................................... 79
  4.1 Rationale for this Chapter ........................................................................ 79
  4.2 Targeted Learning Outcomes of Scaffolding .......................................... 80
    4.2.1 Higher-Order Thinking Skills ............................................................ 81
      4.2.1.1 Ill-Structured Problem-Solving Ability ........................................ 81
      4.2.1.2 Argumentation Ability ................................................................ 82
      4.2.1.3 Self-Directed Learning Ability .................................................... 83
      4.2.1.4 Alignment with NGSS ................................................................... 84
    4.2.2 Learning Content Deeply ................................................................. 92
      4.2.2.1 Alignment with STEM Education Goals ...................................... 93
    4.2.3 Results from Meta-Analysis ........................................................... 94
  4.3 Assessment .............................................................................................. 95
    4.3.1 Results from Meta-Analysis ........................................................... 96
References ....................................................................................................... 98

5 Computer-Based Scaffolding Strategy ......................................................... 107
  5.1 Rationale for Chapter ............................................................................. 107
  5.2 Scaffolding Function ............................................................................... 109
    5.2.1 Conceptual Scaffolding ................................................................... 109
    5.2.2 Strategic Scaffolding ....................................................................... 110
    5.2.3 Metacognitive Scaffolding .............................................................. 111
    5.2.4 Motivation Scaffolding .................................................................... 112
    5.2.5 Results from the Meta-Analysis ..................................................... 113
  5.3 Context Specificity .................................................................................. 114
    5.3.1 What It Is ......................................................................................... 114
    5.3.2 Results from Meta-Analysis ........................................................... 115
References ....................................................................................................... 118
6 Conclusion

6.1 Overall Implications

6.2 How the Meta-Analysis Responds to Persistent Debates in the Scaffolding and Problem-Centered Instruction Literature

6.2.1 Scaffold Customization

6.2.2 Problem-Centered Instruction and Content Learning

6.2.3 Context Specificity

6.2.4 Higher-Order Thinking Skills Versus Content Knowledge

6.2.5 Scaffolding Strategy

6.2.6 Summary

6.3 Other Interesting Findings

6.3.1 Scaffolding’s Effectiveness in Different STEM Disciplines

6.3.2 Scaffolding’s Effectiveness by Grade Level

6.4 Directions for Future Research

6.5 Conclusion
