

Contents

1	The Classical Calculus of Variations	1
1.1	Problem Statement	3
1.2	The Euler–Lagrange Equations	4
1.3	Problems with Isoperimetric Constraints	6
1.4	Sufficient Optimality Conditions via Joint Convexity	6
	Reference	7
2	The Hahn Quantum Variational Calculus	9
2.1	Preliminaries	9
2.2	The Hahn Quantum Euler–Lagrange Equation	15
2.3	The Hahn Quantum Isoperimetric Problem	20
2.4	Sufficient Condition for Optimality	23
2.5	Leitmann’s Direct Method	24
2.6	Illustrative Examples	25
2.7	Higher-order Hahn’s Quantum Variational Calculus	29
2.7.1	Higher-order Fundamental Lemma	30
2.7.2	Higher-order Hahn’s Quantum Euler–Lagrange Equation	36
2.7.3	An Example	38
2.8	Generalized Transversality Conditions	40
2.8.1	The Hahn Quantum Euler–Lagrange Equation	41
2.8.2	Natural Boundary Conditions	42
2.8.3	Isoperimetric Problem	44
2.8.4	Sufficient Condition for Optimality	46
2.8.5	Illustrative Examples	47
2.9	An Application Towards Economics	50
	References	53
3	The Power Quantum Calculus	55
3.1	The Power Quantum Calculus	55
3.1.1	Power Quantum Differentiation	56
3.1.2	Power Quantum Integration	61
3.2	The Power Quantum Variational Calculus	69
3.2.1	The Power Quantum Euler–Lagrange Equation	72

3.2.2	Leitmann's Direct Optimization Method	76
	References	77
4	Conclusion.	79
	References	80
	Index	83
