

Contents

1	Introduction	1
1.1	Introductory Background	5
1.2	Content	13
	References	15
Part I Robust Fault Diagnosis		
2	Unknown Input Observers and Filters	19
2.1	Unknown Input Decoupling	21
2.2	Preventing Fault Decoupling	22
2.3	First- and Second-order Extended Unknown Input Observers	25
2.3.1	Convergence Analysis	26
2.3.2	Design Principles	29
2.4	Unscented Kalman Filter	32
2.4.1	Unscented Transform	33
2.4.2	Principle of the UKF-Based UIF	34
2.5	Determination of an Unknown Input Distribution Matrix	35
2.6	Design of the UIF with Varying Unknown Input Distribution Matrices	39
2.7	Illustrative Examples	42
2.7.1	Estimation of E for an Induction Motor	43
2.7.2	Varying E Case	46
2.7.3	Fault Detection and Isolation of a Two-Tank System	47
2.7.4	First- Versus Second-order EUIO	53
2.8	Concluding Remarks	54
	References	55
3	Neural Network-Based Approaches to Fault Diagnosis	57
3.1	Robust Fault Detection with the Multi-Layer Perceptron	58
3.1.1	Illustrative Example	63
3.1.2	Algorithms and Properties of D-OED for Neural Networks	65
3.1.3	Industrial Application	78

3.2	GMDH Neural Networks	83
3.2.1	Model Uncertainty in the GMDH Neural Network	84
3.2.2	Bounded-Error Approach	86
3.2.3	Synthesis of the GMDH Neural Network Via the BEA	92
3.2.4	Robust Fault Detection with the GMDH Model	93
3.2.5	Alternative Robust Fault Detection Procedure: A Backward Detection Test	95
3.2.6	Industrial Application	101
3.3	Concluding Remarks	111
	References	113

Part II Integrated Fault Diagnosis and Control

4	Integrated Fault Diagnosis and Control: Principles and Design Strategies	119
4.1	FTC Strategy	120
4.1.1	Fault Identification	121
4.1.2	Stabilisation Problem.	122
4.1.3	Observer Design	123
4.1.4	Integrated Design Procedure.	123
4.2	Extension to Non-Linear Systems	125
4.3	Constrained State Estimation	130
4.3.1	Complete Design Procedure	131
4.4	Application Example	132
4.4.1	Description of the Twin-Rotor MIMO System	132
4.4.2	Non-Linear Reference Model of Twin-Rotor MIMO System	133
4.4.3	Fault Scenario 1	135
4.4.4	Fault Scenario 2	136
4.4.5	Fault Scenario 3	138
4.5	Concluding Remarks	140
	References	140
5	Robust \mathcal{H}_∞-Based Approaches	143
5.1	Towards Robust Fault-Tolerant Control	143
5.1.1	Preliminaries	143
5.1.2	Fault Estimation Approach.	145
5.1.3	Integrated FTC Design	149
5.1.4	Illustrative Example: Fault Estimation.	151
5.2	Complete Robust Design of Fault-Tolerant Control	153
5.2.1	Preliminaries	154
5.2.2	Fault Estimation Strategy.	154

5.2.3	Guaranteed Decay Rate	160
5.2.4	Integrated FTC Design	162
5.2.5	Illustrative Example: Fault Estimation	164
5.2.6	Illustrative Examples: Fault-Tolerant Control	166
5.3	Robust Design for Quasi-LPV Systems	168
5.3.1	Actuator Fault Estimation	168
5.3.2	Sensor Fault Estimation	177
5.3.3	Integrated FTC Design	179
5.3.4	Illustrative Example: Fault Estimation of a Multi-Tank System	180
5.4	Concluding Remarks	186
	References	187
6	Fuzzy Multiple-Model Approach to Fault-Tolerant Control.	189
6.1	Essentials of Fuzzy Logic	189
6.2	Fuzzy Multiple-Model Representation	190
6.3	Development of the Takagi–Sugeno Fuzzy Model	192
6.4	Virtual Fuzzy Actuators	193
6.4.1	Implementation Details	198
6.5	Virtual Fuzzy Sensor	199
6.6	Illustrative Examples	200
6.6.1	TS Model Design for a Tunnel Furnace	201
6.6.2	Virtual Sensor for a Tunnel Furnace	205
6.6.3	FTC of a Three-Tank System	207
6.6.4	FTC of a Twin-Rotor System	212
6.7	Concluding Remarks	218
	References	219
7	Conclusions and Future Research Directions.	221
	Reference	225
Index	227

Fault Diagnosis and Fault-Tolerant Control Strategies
for Non-Linear Systems

Analytical and Soft Computing Approaches

Witczak, M.

2014, XVI, 229 p. 117 illus., Hardcover

ISBN: 978-3-319-03013-5
