# Contents

1 Infobiotics Workbench: A P Systems Based Tool for Systems and Synthetic Biology ........................................ 1
Jonathan Blakes, Jamie Twycross, Savas Konur, Francisco Jose Romero-Campero, Natalio Krasnogor and Marian Gheorghe
1.1 Introduction ........................................ 1
1.2 Overview ........................................ 2
   1.2.1 Mathematical Continuous Models .......... 3
   1.2.2 Stochastic Discrete Models ............... 3
   1.2.3 Executable Modeling Formalisms ......... 4
1.3 Lattice Population P Systems ...................... 8
1.4 Infobiotics Workbench .............................. 14
   1.4.1 Modelling in LPP Systems ................ 16
   1.4.2 Simulation ................................... 16
   1.4.3 Model Checking ............................... 20
   1.4.4 Optimisation .................................. 22
1.5 Case Study ........................................ 25
   1.5.1 LPP Model .................................. 26
   1.5.2 Simulations ................................... 27
   1.5.3 Model Checking ............................... 28
   1.5.4 Supplementary Material ..................... 32
1.6 Discussions and Conclusions ....................... 33
References ........................................... 36

2 Statistical Model Checking of Membrane Systems with Peripheral Proteins: Quantifying the Role of Estrogen in Cellular Mitosis and DNA Damage ................................. 43
Matteo Cavaliere, Tommaso Mazza and Sean Sedwards
2.1 Membrane Systems with Peripheral Proteins ........ 43
   2.1.1 Formal Language Preliminaries ........... 46
   2.1.2 Membrane Systems with Peripheral and Integral Proteins .................. 47
2.2 Statistical Model Checking for Membrane Systems with Peripheral Proteins .......................... 53
5 Membrane Systems and Tools Combining Dynamical Structures with Reaction Kinetics for Applications in Chronobiology

Thomas Hinze, Jörn Behre, Christian Bodenstein, Gabi Escuela, Gerd Grünert, Petra Hofstedt, Peter Sauer, Sikander Hayat and Peter Dittrich

5.1 Introduction

5.2 The KaiABC Core Oscillator: A Circadian Clock

5.2.1 Biological Background

5.2.2 Membrane Systems $II_{CSM}$ for Cell Signalling Modules

5.2.3 Applying $II_{CSM}$ to a KaiABC Core Oscillator Model

5.2.4 Simulation Case Study

5.3 Circadian Clocks as Generalised Frequency Control Systems

5.3.1 A Controllable Goodwin-Type Core Oscillator

5.3.2 Chemical Frequency Control by Phase-Locked Loops

5.3.3 Exploring Circadian Clock’s Entrainment Behaviour by Simulation Studies

5.4 Cell Signalling and Gene Regulatory Networks: Logic Circuits in Chronobiological Information Processing

5.4.1 The General Principle of Cell Signalling in vivo

5.4.2 Modelling a Bistable Toggle Switch by a Gene Regulatory Network with Two Feedback Loops

5.4.3 In Vivo Implementation of a Bistable Toggle Switch

5.5 Spatial Rule-Based Simulator Software SRSim at a Glance

5.6 Envisioning an Analysis of Membrane System’s Static and Dynamical Behaviour by a Constrained-Based Approach

5.7 Conclusions

References

6 Biochemical Networks Discrete Modeling Inspired by Membrane Systems

John Jack, Andrei Păun and Mihaela Păun

6.1 Introduction

6.1.1 Modeling with Differential Equations

6.1.2 Stochastic Methods and the Gillespie Algorithm

6.1.3 Improving the Gillespie Algorithm
## 8 Modelling and Analysis of *E. coli* Respiratory Chain

Adrian Țurcanu, Laurențiu Mierlă, Florentin Ipată, Alin Stefanescu, Hao Bai, Mike Holcombe and Simon Coakley
