3 Electromagnetic Field in Cylindrical Bodies

3.1 Solid Cylindrical Workpieces of Homogeneous Material

3.1.1 Induction Heating of Cylindrical Workpieces

3.1.2 Direct Resistance Heating

3.2 Solid Cylindrical Workpieces of Ferromagnetic Material

3.2.1 Direct Resistance Heating

3.2.2 Induction Heating Solid Ferromagnetic Cylinder

3.3 Hollow Cylindrical Workpieces of Homogeneous Material

3.3.1 Induction Heating with Internal and External Exciting Magnetic Field

3.3.2 Induction Heating with External Exciting Magnetic Field

3.3.3 Induction Heating of Hollow Cylindrical Workpieces with Internal Inductors

3.3.4 Resistance Heating of Cylindrical Hollow Workpieces

3.4 Hollow Cylindrical Workpieces of Ferromagnetic Material

3.4.1 Induction Heating

3.4.2 Resistance Heating

References

4 Special Problems in Induction and Resistance Heating

4.1 Resistance Heating of Ferromagnetic Workpieces of Rectangular Cross-section

4.1.1 Influence of Power Supply Circuit on Heating Transient

4.2 Curved Conductors with Cylindrical Cross-Section

4.2.1 Electromagnetic Processes in Toroidal Conductors of Circular Cross-section

4.2.2 Resistance Heating of Curved Cylindrical Work-Pieces

4.2.3 Equalization of Temperature Distribution in the Cross-section of Bent Conductors

4.3 Transverse Flux Induction Heating

4.3.1 Preliminary Choice of Design Parameters

4.3.2 Final TFH System Characteristics

4.3.3 Calculations of Heating Transients

4.3.4 Other Inductor Geometries

4.3.5 Recent Developments and Conclusions

4.4 Planar Circular Coils for Induction Heating

4.4.1 Analytical Solutions

4.4.2 Examples of Results Obtained with the Analytical Solution

4.4.3 Examples of Numerical Results
