1	Introduction	1
	References	8
2	Engineering Approach	11
	References	14
3	Geostatistical Approach	17
	3.1 Ensembles	19
	3.2 Elements	22
	3.3 Sampling at Random.	25
	3.4 Probability Distributions	26
	3.5 Effective Parameters	29
	3.6 Meaning of Geostatistically Inferred Results	32
	3.7 Geostatistics and Uncertainty	33
	References	37
4	Model Identification	39
	4.1 Incorrectness in Mathematics	41
	4.2 Regularization of Ill-Posed Problems	48
	4.3 Problem-Dependence of Model Identification.	49
	4.4 More Complex Model Versus Less Complex One	53
	4.4.1 Short Description of the Borden Landfill.	54
	4.4.2 Simulating the Water Table	54
	4.4.3 Calibration with Respect to the Streamlines and the Arrival Time	57
	References	61
5	Transformation of Geological Objects' Properties into Effective Model Parameters	65
	5.1 Geological Objects and Simulation Models	65
	5.2 Transforming Mechanisms.	67
	5.3 Properties of Transforming Mechanisms	68

- 6 Examples of Linear Transforming Mechanisms 73**
 - 6.1 One-Dimensional Steady-State Filtration to Fully Penetrating Trench 73
 - 6.2 Illustrative Cases 77
 - 6.3 Discussion on Illustrative Cases 84
 - 6.4 Borden Landfill 88
 - References 92

- 7 Examples of Nonlinear Transforming Mechanisms 93**
 - 7.1 Simulation of Transient Filtration in Two-Body Object by Homogeneous Model: Problem Formulation 93
 - 7.2 Explicit Numerical Simulation 95
 - 7.3 Implicit Numerical Simulation 98

- 8 Evaluation of Transforming Mechanisms 105**
 - 8.1 Two-Level Modeling Concept 105
 - 8.2 Examples of Evaluating Linear Transforming Mechanisms . . . 107
 - 8.3 Transforming Mechanisms for Effective Recharge Rates at Borden Landfill 111
 - 8.4 Two-Level Modeling for Non-Linear Transforming Mechanisms 113
 - 8.5 Conclusion. 119
 - References 120

- 9 Inverse Problems and Transforming Mechanisms 121**
 - 9.1 Linear Transforming Mechanisms: Illustrative Examples. 122
 - 9.2 Borden Landfill: Evaluating Actual Recharge Rates 128
 - 9.3 Non-Linear Transforming Mechanisms: Illustrative Example . . 136
 - 9.4 Conclusion. 141
 - References 142

- 10 Advective Solute Transport Through Porous Media. 143**
 - 10.1 On Classical Convective-Dispersive Model 143
 - 10.1.1 First Versus Third Type of Boundary Condition at Inlet 143
 - 10.1.2 On Dispersion Coefficient 149
 - 10.2 Model of Advective Solute Transport Involving Hydrodynamic Dispersion 150
 - 10.2.1 Introductory Examples 150
 - 10.2.2 Example of Simulation of Real Column Test. 155
 - 10.3 Transforming Mechanisms for Degradation Rate 158
 - 10.3.1 Estimating Hydraulic Dispersion 158
 - 10.3.2 Estimating Effective Value for Degradation Rate for Homogeneous Model 160

- 10.3.3 Solute Transport Through Piecewise Heterogeneous Porous Media 161
- 10.3.4 Transforming Mechanisms for Degradation Rate and Inverse Problem Solving 162
- 10.4 Conclusions 163
- References 169

- 11 Conclusion 171**
- References 173

- Afterword 176**

Effective Parameters of Hydrogeological Models

Gorokhovski, V.

2014, XXI, 182 p. 68 illus., 35 illus. in color., Hardcover

ISBN: 978-3-319-03568-0
