

Contents

Introduction	xvii
1 Wildlife Tracking Data Management: Chances Come from Difficulties	1
Holger Dettki, Ferdinando Urbano, Mathieu Basille and Francesca Cagnacci	
Introduction.	2
Requirements.	3
Chances	4
Spatial and Spatiotemporal Extensions	6
References	6
2 Storing Tracking Data in an Advanced Database Platform (PostgreSQL)	9
Ferdinando Urbano and Holger Dettki	
Introduction.	10
Create a New Database.	12
Create a New Table and Import Raw GPS Data	14
Finalise the Database: Defining GPS Acquisition Timestamps, Indexes and Permissions	21
Export Data and Backup.	23
Reference	24
3 Extending the Database Data Model: Animals and Sensors	25
Ferdinando Urbano	
Introduction.	25
Import Information on GPS Sensors and Add Constraints to the Table.	27
Import Information on Animals and Add Constraints to the Table.	29
First Elements of the Database Data Model.	32

4 From Data to Information: Associating GPS Positions with Animals 35
 Ferdinando Urbano
 Introduction. 35
 Storing Information on GPS Sensor Deployments on Animals. 38
 From GPS Positions to Animal Locations 40
 Timestamping Changes in the Database Using Triggers 41
 Automation of the GPS Data Association with Animals 44
 Consistency Checks on the Deployments Information. 45
 Synchronisation of gps_sensors_animals and gps_data_animals 47

5 Spatial is not Special: Managing Tracking Data in a Spatial Database 53
 Ferdinando Urbano and Mathieu Basille
 Introduction. 53
 Spatially Enable the Database 55
 Exploring Spatial Functions 57
 Transforming GPS Coordinates into a Spatial Object 62
 Automating the Creation of Points from GPS Coordinates 65
 Creating Spatial Database Views 68
 Vector Data Import and Export 72
 Connection from Client Applications 72
 Reference 73

6 From Points to Habitat: Relating Environmental Information to GPS Positions 75
 Ferdinando Urbano, Mathieu Basille and Pierre Racine
 Introduction. 76
 Adding Ancillary Environmental Layers 77
 Importing Shapefiles: Points, Lines and Polygons 78
 Importing Raster Files 81
 Querying Spatial Environmental Data 83
 Associate Environmental Characteristics with GPS Locations 88
 References 93

7 Tracking Animals in a Dynamic Environment: Remote Sensing Image Time Series 95
 Mathieu Basille, Ferdinando Urbano, Pierre Racine, Valerio Capecchi and Francesca Cagnacci
 Introduction. 96
 MODIS NDVI Data Series 98
 Dealing with Raster Time Series 99
 Time Ranges in PostgreSQL 100
 Import the Raster Time Series 103

Intersection of Locations and NDVI Rasters	106
Automating the Intersection	110
References	113
8 Data Quality: Detection and Management of Outliers	115
Ferdinando Urbano, Mathieu Basille and Francesca Cagnacci	
Introduction.	116
Review of Errors that Can Affect GPS Tracking Data	116
A General Approach to the Management of Erroneous Locations . . .	118
Missing Records	121
Records with Missing Coordinates	121
Multiple Records with the Same Acquisition Time	122
Records with Different Values When Acquired Using Different	
Acquisition Sources	123
Records Erroneously Attributed to Animals.	124
Records Located Outside the Study Area	124
Records Located in Impossible Places	128
Records that Would Imply Impossible Movements.	128
Records that Would Imply Improbable Movements	133
Update of Spatial Views to Exclude Erroneous Locations.	134
Update Import Procedure with Detection of Erroneous Positions . . .	135
References	137
9 Exploring Tracking Data: Representations, Methods	
and Tools in a Spatial Database	139
Ferdinando Urbano, Mathieu Basille and Pierre Racine	
Introduction.	140
Extraction of Statistics from the GPS Data Set	141
A New Data Type for GPS Tracking Data	142
Representations of Trajectories	143
Regularisation of GPS Location Data Sets	148
Interpolation of Missing Coordinates	152
Detection of Sensors Acquisition Scheduling.	156
Representations of Home Ranges.	160
Geometric Parameters of Animal Movements	166
An Alternative Representation of Home Ranges	171
Dynamic Age Class	175
Generation of Random Points	177
References	180
10 From Data Management to Advanced Analytical Approaches:	
Connecting R to the Database.	181
Bram Van Moorter	
Introduction: From Data Management to Data Analysis	181

Background for the Analysis of Animal Space Use Data 182

The Tools: R and Adehabitat. 183

Connecting R to the Database 186

Data Inspection and Exploration 190

Home Range Estimation 200

Habitat Use and Habitat Selection Analysis. 204

References 212

11 A Step Further in the Integration of Data Management and Analysis: PI/R 213

Mathieu Basille, Ferdinando Urbano and Joe Conway

Introduction. 214

Getting Started with PI/R 215

Sample Median and Quantiles 216

In the Middle of the Night 219

Extending the Home Range Concept 222

Conclusions and Perspectives 228

12 Deciphering Animals' Behaviour: Joining GPS and Activity Data 231

Anne Berger, Holger Dettki and Ferdinando Urbano

Introduction. 232

Import the Activity Data into the Database 234

Exploring Activity Data and Associating with GPS Positions 239

References 243

13 A Bigger Picture: Data Standards, Interoperability and Data Sharing 245

Sarah Cain Davidson

Introduction. 246

Describing Data 247

Data and Metadata Standards 248

Interoperability 250

Publish Your Metadata 251

Publish and Share Your Data 253

Share Your Data Without Publishing 253

References 256

Spatial Database for GPS Wildlife Tracking Data
A Practical Guide to Creating a Data Management
System with PostgreSQL/PostGIS and R

Urbano, F.; Cagnacci, F. (Eds.)

2014, XXIII, 257 p. 47 illus., 32 illus. in color., Hardcover

ISBN: 978-3-319-03742-4
