

Contents

1 Preliminaries on Transition Probabilities	1
1.1 Basic Definitions and Results	2
1.2 Invariant Probabilities	20
1.3 The Ergodic Decomposition of Kryloff, Bogoliouboff, Beboutoff and Yosida	25
1.4 Feller Transition Probabilities	36
1.4.1 Supports of Elementary and Ergodic Invariant Measures, Minimality, Unique Ergodicity, and Generic Points	36
1.4.2 Equicontinuity	45
2 Preliminaries on Transition Functions and Their Invariant Probabilities	57
2.1 Transition Functions	57
2.2 Examples	68
2.2.1 Transition Functions Defined by One-Parameter Semigroups or Groups of Measurable Functions: General Considerations	69
2.2.2 Transition Functions Defined by Specific One-Parameter Semigroups or Groups of Measurable Functions	72
2.2.3 Transition Functions Defined by One-Parameter Convolution Semigroups of Probability Measures	83
2.3 Invariant Probability Measures	89
3 Preliminaries on Vector Integrals and Almost Everywhere Convergence	97
3.1 The Bochner and the Dunford-Schwartz Integrals	97
3.1.1 The Bochner Integral	98
3.1.2 Complete Measure Spaces	102
3.1.3 The Dunford-Schwartz Integral	105

3.2	Almost Everywhere Convergence and the Dunford-Schwartz Theorem	110
3.2.1	Pointwise and Almost Everywhere Convergence	110
3.2.2	Semigroups of Operators Defined by Invariant Probabilities, and a Theorem of Dunford and Schwartz	120
3.3	The Pointwise Integral	129
3.3.1	Definitions and Basic Properties	129
3.3.2	An Application: The Existence of Invariant Probabilities for Transition Functions	138
4	Special Topics	145
4.1	Functions Constant Almost Everywhere	145
4.2	Conditional Expectation	147
4.3	Weak* Convergence and Continuous-Time Limit Supports	148
4.4	Continuous-Time Banach Limits	157
4.5	The Ascoli-Arzelà Theorem	167
4.6	Ordered Vector Spaces and Positive Operators	170
5	The Ergodic Decomposition of Kryloff, Bogoliouboff, Beboutoff and Yosida, Part I	175
5.1	Elementary Measures and Their Role in the Decomposition	176
5.2	The Measurability of \mathcal{D} , Γ_0 , Γ_c , Γ_{cp} and Γ_{cpi}	183
5.3	Sets of Maximal Probability	192
6	The Ergodic Decomposition of Kryloff, Bogoliouboff, Beboutoff and Yosida, Part II: The Role of the Invariant Ergodic Probability Measures in the Decomposition	199
6.1	Preliminaries on Ergodic Measures	199
6.2	The Invariant Ergodic Probability Measures as Standard Elementary Measures	218
6.3	More About the Set of All Invariant Ergodic Probabilities	228
7	Feller Transition Functions	249
7.1	Elementary Measures and Their Supports	250
7.2	Unique Ergodicity and Related Topics	267
7.2.1	Supports of Invariant Probabilities of Uniquely Ergodic Transition Functions and a Related Topic	267
7.2.2	A Criterion for Unique Ergodicity	272
7.2.3	Generic Points	280
7.3	Mean Ergodic Theorems	289
	Appendices	309
A	Semiflows and Flows: The Algebraic and Topological Setting, and First Examples	309
A.1	Semigroups, Groups and Coset Spaces	309
A.2	Topologies on Semigroups, Groups and Coset Spaces	315
A.3	Actions, Semiflows and Flows	325

- B Invariant Measures, One-Parameter Convolution Semigroups, and Additional Examples of Semiflows and Flows** 335
 - B.1 Invariant Measures 335
 - B.2 Banach Algebras, Convolutions of Measures, and the Exponential Function 349
 - B.3 One-Parameter Convolution Semigroups of Probability Measures 361
 - B.4 Exponential Semiflows and Flows 363
 - B.4.1 Stochastic Matrices and Semiflows 364
 - B.4.2 Exponential Flows on Spaces of Cosets of $SL(n, \mathbb{R})$ 370

- Bibliography** 375

- Index** 381
