Part I  Laser–Matter Interaction Phenomena

1 Ultrafast Laser Induced Confined Microexplosion: 
A New Route to Form Super-Dense Material Phases ............... 3
Ludovic Rapp, Bianca Haberl, Jodie E. Bradby, 
Eugene G. Gamaly, Jim S. Williams and Andrei V. Rode
1.1 Introduction ......................................................... 4
1.2 Energy Density in Confined Ultra-Short Laser Interaction 
with Solids ............................................................ 5
  1.2.1 Absorbed Energy Density .................................... 5
  1.2.2 Ionisation Processes .......................................... 7
  1.2.3 Increase in the Absorbed Energy Density Due 
to Modification of Optical Properties ......................... 10
  1.2.4 Energy Transfer From Electrons to Ions: 
     Relaxation Processes After the Pulse ...................... 11
1.3 Shock Wave Propagation and Void Formation ................. 13
  1.3.1 Shock Wave Generation and Propagation ............... 13
  1.3.2 Shock Wave Dissipation .................................... 14
  1.3.3 Rarefaction Wave: Formation of Void .................. 15
1.4 Density and Temperature in the Shock-Wave 
and Heat-Wave Affected Solid ..................................... 16
  1.4.1 Two Characteristic Areas in Confined 
     Microexplosion ................................................. 16
  1.4.2 Upper Limit for the Pressure Achievable 
in Confined Interaction ....................................... 17
  1.4.3 Ionisation Wave Propagation Towards 
the Laser Beam .................................................. 18
  1.4.4 Modelling of Macroscopic Explosions 
     by Micro-Explosion .......................................... 20
1.5 Formation of Void at Si/SiO₂ Interface ......................... 21
1.6 Summary ............................................................. 24
References ............................................................. 25
4.2 Effect of Charged Ablated Nanoparticles Long-Residing in the Ambient Gas

4.2.1 Observation of Low-Threshold Air Breakdown

4.2.2 Locations of Plasma and the Resulting Crater Morphology

4.2.3 Dimensions, Lifetime and Electrical Properties of Nanoparticles

4.2.4 Removal of Charged Particles by Application of Electric Field

4.2.5 Relaxation of Plasma in Atmospheric Air and Its Role in High Repetition Rate Micromachining

4.3 Self-Scattering of Focused Ultrashort Pulses

4.3.1 Threshold Conditions

4.3.2 Contributing Mechanisms

4.3.3 Optimization of Exposure Conditions to Eliminate the Scattering

4.4 Discussion and Conclusions

References

Part II Nanoparticles Related Technologies and Problems

5 Laser Generation and Printing of Nanoparticles

5.1 Introduction

5.2 Laser Printing of Nanoparticles and Nanoparticle Arrays

5.2.1 Laser Printing of Nanoparticles

5.2.2 Laser Fabrication of Large-Scale Nanoparticle Arrays

5.3 Resonant Electric and Magnetic Response of Silicon Nanoparticles

5.4 Generation of Silicon Nanoparticles from Bulk Silicon

5.5 Microreplication of Laser-Transferred Gold Nanoparticles/Nanomolding

5.6 Laser-Based Synthesis of Nanoparticles and Surface Modified Nanoconjugates

5.6.1 Ultrapure Nanoparticles by Pulsed Laser Ablation in Liquids

5.6.2 Surface-Functionalized Nano(Bio)Conjugates

5.7 Novel Laser-Based Conjugation Concepts

5.8 Conclusion
