

Contents

1	Introduction	1
2	Review of Probability and Statistics	5
2.1	Basic Definitions	5
2.1.1	Joint, Conditional and Marginal Probabilities	6
2.1.2	The Concept of Average	8
2.1.3	Characteristic Function	9
2.2	Entropy and Information	9
2.3	Sums of Random Variables: The Thermodynamic Limit	12
2.4	Entropy and Thermodynamic Equilibrium	16
2.5	Stochastic Processes	17
2.5.1	The Ergodic Property	19
2.5.2	Markov Processes	22
2.6	Coarse-Graining and Continuous Limit	24
2.7	Master Equation and Its Applications	27
2.7.1	The Random Walk	29
2.7.2	Extinction Process	31
2.8	The Wiener-Khinchin Theorem	32
2.9	Problems	34
2.10	Further Reading	34
	Appendix	35
3	Kinetic Theory	41
3.1	From Γ -Space to Macroscopic Distributions	41
3.2	Statistical Closure	44
3.3	The Role of Fluctuations	46
3.4	Entropy in Kinetic Theory	49
3.4.1	Gibbs Paradox and Other Trouble	50
3.4.2	Quantum Effects	52

3.5	The Boltzmann Equation	53
3.5.1	The Maxwell-Boltzmann Distribution.	55
3.5.2	Entropy in Velocity Space	56
3.5.3	The H Theorem	57
3.6	The Fluid Limit.	59
3.7	Thermodynamic Meaning of Temperature and Entropy.	61
3.8	The Equations of Fluid Mechanics.	63
3.9	Viscosity and Thermal Diffusivity	65
3.9.1	Diffusion in a Gas Mixture.	67
3.10	Elementary Transport Theory	68
3.10.1	Balance of Forces	70
3.10.2	Thermal Energy Budget	71
3.10.3	Relaxation to Thermal Equilibrium	71
3.11	Problems	73
3.12	Further Reading	75
	Appendix	75
4	Thermodynamics	79
4.1	Basic Definitions	79
4.2	Conditions for a Thermodynamic Description	83
4.2.1	Thermodynamic Inequalities	84
4.2.2	Formal Derivation	86
4.2.3	Le Chatelier Principle	87
4.3	Thermodynamics: Macroscopic Point of View.	89
4.4	Thermal Engines	91
4.5	Nernst Theorem: Third Law of Thermodynamics.	94
4.6	Thermodynamic Potentials	96
4.6.1	Enthalpy	96
4.6.2	Joule-Thomson Process	98
4.6.3	Helmholtz Free Energy	99
4.6.4	Gibbs Free Energy	100
4.7	Free Energy as an Internal Source of Work.	101
4.8	Systems with Varying Number of Particles	102
4.8.1	Chemical Potential.	103
4.8.2	Helmholtz and Gibbs Free Energy.	104
4.8.3	Thermodynamic Potential, Function of Chemical Potential.	106
4.9	Entropy and Thermodynamic Potentials in a Mixture of Gases.	107
4.10	Chemical Reactions in a Gas Mixture.	108
4.10.1	Reaction Enthalpy	109
4.11	Phase Transitions.	110
4.11.1	Metastable States.	113
4.11.2	Critical Phenomena	115

4.12	Thermodynamics of Moist Air	117
4.13	Problems	118
4.14	Further Reading	120
	Appendix	121
5	Introduction to Equilibrium Statistical Mechanics	125
5.1	The Microcanonical Distribution	125
5.1.1	The Ergodic Problem	127
5.1.2	Statistical Equilibrium and Mixing	129
5.2	Entropy in Equilibrium Statistical Mechanics	131
5.3	The Maximum Entropy Method	134
5.3.1	From Classical to Quantum Statistics	136
5.4	The Gibbs Distribution	138
5.4.1	Role of the Partition Function	140
5.5	The Grand Canonical Distribution	141
5.5.1	Application: Bose-Einstein and Fermi-Dirac Statistics	143
5.6	The Equipartition Theorem	145
5.7	The Ising Model	146
5.7.1	The 1D Case	148
5.7.2	The 2D Case	149
5.8	Problems	151
5.9	Further Reading	152
	Appendix	152
6	The Theory of Fluctuations	155
6.1	Fluctuations of Thermodynamic Quantities	155
6.2	Spatial Structure of Fluctuations	159
6.2.1	The Gaussian Model	161
6.2.2	Scaling Relations at the Critical Point	165
6.3	Time Structure of Fluctuations	166
6.3.1	Brownian Motion	168
6.3.2	Fluctuation–Dissipation Relations	170
6.4	Temporal Reversibility	174
6.4.1	Onsager Relations	175
6.4.2	Entropy Production	177
6.5	Problems	180
6.6	Further Reading	182
	Index	183
