

Contents

1	An Introductory Tour	1
1.1	Some ODE Applications	1
1.2	An ODE/DAE Application	32
1.3	A PDE Application	37
1.4	Summary	43
	References	44
2	More on ODE Integration	45
2.1	A Basic Fixed Step ODE Integrator	45
2.2	A Basic Variable-Step Nonstiff ODE Integrator	51
2.3	A Basic Variable Step Implicit ODE Integrator	67
2.4	MATLAB ODE Suite	85
2.5	Some Additional ODE Applications	86
2.5.1	Spruce Budworm Dynamics	86
2.5.2	Liming to Remediate Acid Rain	93
2.6	On the Use of SCILAB and OCTAVE	109
2.7	How to Use Your Favorite Solvers in MATLAB?	115
2.7.1	A Simple Example: Matrix Multiplication	117
2.7.2	MEX-Files for ODE Solvers	122
2.8	Summary	123
	References	123
3	Finite Differences and the Method of Lines	125
3.1	Basic Finite Differences	126
3.2	Basic MOL	127
3.3	Numerical Stability: Von Neumann and the Matrix Methods	129
3.4	Numerical Study of the Advection Equation	136
3.5	Numerical Study of the Advection-Diffusion Equation	142
3.6	Numerical Study of the Advection-Diffusion-Reaction Equation	150
3.7	Is it Possible to Enhance Stability?	151
3.8	Stiffness	153
3.9	Accuracy and the Concept of Differentiation Matrices	157

- 3.10 Various Ways of Translating the Boundary Conditions. 167
 - 3.10.1 Elimination of Unknown Variables 170
 - 3.10.2 Fictitious Nodes. 174
 - 3.10.3 Solving Algebraic Equations 176
 - 3.10.4 Tricks Inspired by the Previous Methods 179
 - 3.10.5 An Illustrative Example (with Several
Boundary Conditions). 181
- 3.11 Computing the Jacobian Matrix of the ODE System 190
- 3.12 Solving PDEs Using SCILAB and OCTAVE 197
- 3.13 Summary 200
- References 201

- 4 Finite Elements and Spectral Methods 203**
 - 4.1 The Methods of Weighted Residuals 211
 - 4.1.1 Interior Method 213
 - 4.1.2 Boundary Method 213
 - 4.1.3 Mixed Method. 213
 - 4.1.4 Galerkin Method 214
 - 4.1.5 Collocation Method 214
 - 4.1.6 Orthogonal Collocation Method. 214
 - 4.2 The Basics of the Finite Element Method. 215
 - 4.3 Galerkin Method Over Linear Lagrangian Elements. 216
 - 4.3.1 LHS of the Weighted Residual Solution. 218
 - 4.3.2 First Term in the RHS of the Weighted
Residual Solution. 219
 - 4.3.3 Second Term in the RHS of the Weighted
Residual Solution. 220
 - 4.3.4 Third Term in the RHS of the Weighted
Residual Solution. 221
 - 4.3.5 Fourth Term in the RHS of the Weighted
Residual Solution. 224
 - 4.4 Galerkin Method Over Linear Lagrangian Elements:
Contribution of the Boundary Conditions 227
 - 4.4.1 Dirichlet Boundary Conditions. 228
 - 4.4.2 Neumann Boundary Conditions 228
 - 4.5 The Finite Element Method in Action 229
 - 4.6 The Finite Element Method Applied to Systems of PDEs. 235
 - 4.7 Galerkin Method Over Hermitian Elements. 237
 - 4.7.1 LHS Term of the Weighted Residual Solution. 237
 - 4.7.2 First and Second Terms of the RHS Term
of the Weighted Residual Solution. 239
 - 4.7.3 Third Term of the RHS Term
of the Weighted Residual Solution. 241

4.7.4	Fourth Term of the RHS Term of the Weighted Residual Solution	242
4.7.5	Galerkin Method Over Hermitian Elements: Contribution of the Boundary Conditions	243
4.8	An Illustrative Example	245
4.9	The Orthogonal Collocation Method.	249
4.9.1	LHS Term of the Collocation Residual Equation	251
4.9.2	First Three Terms of Collocation Residual Equation	252
4.9.3	Fourth Term of the RHS of the Collocation Residual Equation	254
4.9.4	Contribution of the Boundary Conditions	255
4.9.5	A Brief Benchmark	256
4.10	Chebyshev Collocation	256
4.11	The Proper Orthogonal Decomposition.	262
4.11.1	The Method of Snapshots	265
4.11.2	Example: The Heat Equation.	268
4.11.3	Example: The Brusselator	273
4.12	On the Use of SCILAB and OCTAVE.	277
4.13	Summary	282
	References	282
5	How to Handle Steep Moving Fronts?	285
5.1	Conservation Laws	286
5.2	The Methods of Characteristics and of Vanishing Viscosity	288
5.3	Transformation-Based Methods	293
5.4	Upwind Finite Difference and Finite Volume Schemes.	295
5.5	A Divide and Conquer Approach	298
5.6	Finite Volume Methods and Slope Limiters	303
5.7	Grid Refinement	321
5.8	An Additional PDE Application.	331
5.9	Summary	334
	References	335
6	Two Dimensional and Time Varying Spatial Domains	339
6.1	Solution of Partial Differential Equations in More than 1D Using Finite Differences.	339
6.1.1	The Heat Equation on a Rectangle.	340
6.1.2	Graetz Problem with Constant Wall Temperature	344
6.1.3	Tubular Chemical Reactor.	348
6.1.4	Heat Equation on a Convex Quadrilateral	352
6.1.5	A Convection-Diffusion Equation on a Square	357
6.1.6	Burgers Equation on a Square	360

- 6.2 Solution of 2D PDEs Using Finite Element Techniques 361
 - 6.2.1 FitzHugh-Nagumo's Model 364
 - 6.2.2 Reduced-Order Model for FitzHugh-Nagumo Model. 382
- 6.3 Solution of PDEs on Time-Varying Domains 388
 - 6.3.1 The Freeze-Drying Model 389
 - 6.3.2 The Landau Transform 391
 - 6.3.3 The Finite Element Representation. 394
- 6.4 Summary 399
- References 400
- Index 403**
