## Contents

1 Introduction ........................................ 1  
   References ........................................ 2

2 Thin Amorphous Fe–Tb Alloy Films ..................... 5  
   2.1 Phase Diagram ................................... 5  
   2.2 Intrinsic Magnetic Structure: Magnetic Anisotropy,  
       Exchange Coupling, and Sperimagnetism ............ 7  
   2.3 Magnetic Properties with Regard to Alloy Composition,  
       Film Thickness, and Temperature .................... 9  
   2.4 Magnetostriction .................................. 13  
   2.5 Fe–Tb Films for Application ....................... 14  
   References ........................................... 16

3 Co/Pt Multilayers .................................... 19  
   3.1 Origin of Magnetic Anisotropy ...................... 19  
   3.2 Magnetic Properties Depending on the Structure  
       of the Multilayers ................................ 21  
   References ........................................... 23

4 Exchange-Bias Effect in F/FI Rare-Earth-Transition-Metal  
   Heterostructures .................................... 25  
   References ........................................... 28

5 Experimental Techniques .............................. 31  
   5.1 Film Deposition Using Magnetron (Co-)Sputtering  
       from Element Targets .............................. 31  
   5.2 The Fabrication of Nanodot Arrays by Pre-patterning . 34  
   5.3 Structural Characterization Techniques ............. 35  
       5.3.1 Estimation of Film Thickness by X-Ray  
           Reflectometry ................................... 35  
       5.3.2 Stoichometry Measurements by Rutherford  
           Backscattering Spectrometry .................... 36  
       5.3.3 Determining Crystal Structures by X-Ray  
           Diffraction .................................... 37
5.3.4 Film Morphology, Crystal Structure, and Topography
Investigations by Electron Microscopy .......................... 39
5.3.5 Surface Imaging by Atomic Force Microscopy ............ 40
5.4 Investigation of Magnetic Properties .......................... 40
5.4.1 Magnetometry by Magneto-Optical Kerr Effect
Measurements ....................................................... 40
5.4.2 X-Ray Magnetic Circular Dichroism: An Element
Specific Probe for Magnetism ................................. 42
5.4.3 Integral Magnetic Measurements Using
a Superconducting Quantum Interference Device ............ 45
5.4.4 Stray Field Imaging with Magnetic
Force Microscopy ................................................ 48

References .......................................................... 49

6 Magnetic Order in Thin Fe\textsubscript{100-x}Tb\textsubscript{x} Films: A Temperature
and Stoichiometry Dependent Study ............................. 51
6.1 Morphology and Structural Properties .......................... 51
6.2 Sperimagnetism and Its Properties at Room Temperature .... 54
6.2.1 Net Saturation Magnetization, Coercivity,
and Magnetic Anisotropy with Respect to the Tb
Content of the Fe–Tb Alloy Film .............................. 54
6.2.2 Magnetization Reversal in Fe–Tb Films Dominated
by the Fe Sublattice .............................................. 56
6.2.3 Magnetization Reversal in Fe–Tb Films Dominated
by the Tb Sublattice .............................................. 57
6.3 The Influence of Temperature on the Sperimagnetic
Configuration ....................................................... 60
6.3.1 Magnetization Reversal for Various Temperatures
in Fe–Tb Films Dominated by the Fe Sublattice ............. 64
6.3.2 Magnetization Reversal for Various Temperatures
in Fe–Tb Films Dominated by the Tb Sublattice ............. 66
6.4 Reversal Mechanism in the Vicinity
of the Compensation Point ...................................... 68
6.5 Summary ......................................................... 74
References .......................................................... 75

7 Percolated Fe\textsubscript{100-x}Tb\textsubscript{x} Nanodot Arrays: Exchange Interaction
and Magnetization Reversal ........................................ 77
7.1 Morphology and Structural Properties of Thin Fe–Tb
Films on Pre-patterned Substrates ............................... 78
7.2 Magnetization Reversal and Pinning Effects .................... 79
7.3 Lokal Magnetic Properties and Domain Configuration ....... 80
7.4 Angular Dependency of the Switching Field for Nanodots
and Trench Material .............................................. 84
8 Interfacial Exchange Coupling in Heterostructures of Fe–Tb Alloy Films and Co/Pt Multilayers

8.1 Morphology and Structural Properties

8.2 Interfacial Exchange Coupling with Regard to the Dominant Moment in the Fe–Tb Alloy System

8.2.1 Interfacial Exchange Coupling in Fe Dominated Heterostructures

8.2.2 Interfacial Exchange Coupling in Tb Dominated Heterostructures

8.2.3 The Interfacial Exchange Energy as Function of the Composition of the Fe–Tb Layer

8.3 Interfacial Exchange Coupling Depending on the Thickness of the F Layer

8.4 Interfacial Exchange Coupling Depending on the Thickness of the FI Pinning Layer

8.5 Training Effect in EB Heterostructures Dominated by an AF Exchange

8.5.1 Characteristic of the Training Effect with Respect to the Temperature

8.5.2 Influence of the Cooling Field on the Training Effect

8.5.3 Cycle Field Dependence of the EB Training Effect

8.6 Summary

9 Interlayer Exchange Coupling Through Pt Spacer Layers in Fe–Tb/Pt/[Co/Pt] Heterostructures

9.1 Morphology and Structural Properties

9.2 Influence of Pt Spacer Layer Thickness on the EB Field

9.3 Summary

10 Conclusions

Curriculum Vitae
Magnetic Order and Coupling Phenomena
A Study of Magnetic Structure and Magnetization
Reversal Processes in Rare-Earth-Transition-Metal
Based Alloys and Heterostructures
