

Contents

I	The Geometry of Statistical Models	1
1	Statistical Models	3
1.1	Probability Spaces	3
1.1.1	Discrete Random Variables	4
1.1.2	Continuous Random Variables	5
1.2	A Statistic Estimation	6
1.3	Parametric Models	6
1.3.1	Definition	7
1.3.2	Basic Properties	8
1.3.3	Parameterizations	11
1.3.4	Usual Examples	11
1.4	Exponential Family	16
1.5	Mixture Family	19
1.6	Fisher Information	21
1.7	Christoffel Symbols	27
1.8	Levi–Civita Connection	30
1.9	$\nabla^{(1)}$ -Connection	31
1.10	$\nabla^{(-1)}$ -Connection	32
1.11	$\nabla^{(\alpha)}$ -Connection	33
1.12	Skewness Tensor	35
1.13	Autoparallel Curves	39
1.14	Jeffrey’s Prior	41
1.15	Problems	42
2	Explicit Examples	51
2.1	The Normal Distribution	51
2.1.1	The Fisher Metric	51
2.1.2	The Geodesics	52
2.1.3	α -Autoparallel Curves	55

2.2	Jeffrey's Prior	59
2.3	Lognormal Distribution	59
2.4	Gamma Distribution	60
2.5	Beta Distribution	61
2.6	Bernoulli Distribution	62
2.7	Geometric Probability Distribution	63
2.8	Multinomial Geometry	63
2.9	Poisson Geometry	65
2.10	The Space $\mathcal{P}(\mathcal{X})$	66
	2.10.1 -1 -Representation	68
	2.10.2 0 -Representation	69
	2.10.3 1 -Representation	70
	2.10.4 Fisher Metric	70
2.11	Problems	71
3	Entropy on Statistical Models	77
3.1	Introduction to Information Entropy	78
3.2	Definition and Examples	80
3.3	Entropy on Products of Statistical Models	87
3.4	Concavity of Entropy	88
3.5	Maxima for Entropy	89
3.6	Weighted Coin	93
3.7	Entropy for Finite Sample Space	94
3.8	A Continuous Distribution Example	96
3.9	Upper Bounds for Entropy	97
3.10	Boltzman–Gibbs Submanifolds	100
3.11	Adiabatic Flows	104
3.12	Problems	106
4	Kullback–Leibler Relative Entropy	111
4.1	Definition and Basic Properties	111
4.2	Explicit Computations	114
4.3	Cross Entropy	117
4.4	Relation with Fisher Metric	118
4.5	Relation with $\nabla^{(1)}$ -Connection	123
4.6	Third Order Approximation	123
4.7	Variational Properties	124
4.8	Problems	129

5	Informational Energy	133
5.1	Definitions and Examples	133
5.2	Informational Energy and Constraints	145
5.3	Product of Statistical Models	147
5.4	Onicescu’s Correlation Coefficient	147
5.5	First and Second Variation	148
5.6	Informational Energy Minimizing Curves	150
5.7	The Laws of Thermodynamics	152
5.8	Uncertainty Relations	156
5.9	A Functional Extremum	160
5.10	Problems	162
6	Maximum Entropy Distributions	165
6.1	Moment Constraints	165
6.2	Matching the First N Moments	166
6.3	Case $N = 0$: Constraint-Free Distribution	168
6.4	Case $N = 1$: Matching the Mean	168
6.5	$N = 2$: Matching Mean and Variance	173
6.6	The Maxwell–Boltzmann Distribution	179
6.7	Problems	184
II	Statistical Manifolds	189
7	An Introduction to Manifolds	191
7.1	The Concept of Manifold	191
7.2	Manifold Definition	194
7.3	Examples of Manifolds	196
7.4	Tangent Space	200
7.5	Lie Bracket	204
7.6	Differentiable Maps	205
7.7	1-Forms	207
7.8	Tensors	208
7.9	Riemannian Manifolds	210
7.10	Linear Connections	211
7.11	Levi–Civita Connection	214
7.12	Problems	218
7.13	Historical Remarks	220

8	Dualistic Structure	223
8.1	Dual Connections	224
8.2	Dual Flatness	228
8.3	Dual Connections in Strong Sense	228
8.4	Relative Torsion Tensors	231
8.5	Dual α -Connections	233
8.6	Difference Tensor	236
8.7	Curvature Vector Field	237
8.8	Skewness Tensor	238
8.9	Relative Curvature Tensor	242
8.10	Curvature of α -Connections	247
8.11	Statistical Manifolds	249
8.12	Problems	252
9	Dual Volume Elements	257
9.1	Riemannian Volume Element	258
9.2	α -Volume Element for Exponential Model	261
9.3	α -Volume Element for Mixture Model	263
9.4	Dual Volume Elements	265
9.5	Existence and Uniqueness	266
9.6	Equiaffine Connections	268
9.7	Manifolds with Constant Curvature	274
9.8	Divergence of a Vector Field	276
9.9	Lie Derivative of a Volume Element	282
9.10	α -Volume Elements	284
9.11	Problems	287
10	Dual Laplacians	291
10.1	Definition of Hessian	291
10.2	Dual Hessians	292
10.3	The Laplacian	293
10.4	Dual Laplacians	294
10.5	α -Laplacians	295
10.6	Hopf's Lemma	295
10.7	Laplacians and Volume Elements	296
10.8	Divergence of Tensors	298
10.9	Divergence of the Metric Tensor	299
10.10	Problems	301

11 Contrast Functions Geometry	303
11.1 Contrast Functions on \mathbb{R}^k	304
11.2 Contrast Functions on a Manifold	307
11.3 Induced Riemannian Metric	309
11.4 Dual Contrast Function	311
11.5 Induced Primal Connection	312
11.6 Induced Dual Connection	313
11.7 Skewness Tensor	314
11.8 Third Order Approximation of $D(p \cdot)$	315
11.9 Hessian Geometry	316
11.10 Problems	317
12 Contrast Functions on Statistical Models	321
12.1 A First Example	321
12.2 f -Divergence	322
12.3 Particular Cases	326
12.3.1 Hellinger Distance	327
12.3.2 Kullback–Leibler Relative Entropy	328
12.3.3 Chernoff Information of Order α	328
12.3.4 Jeffrey Distance	329
12.3.5 Kagan Divergence	329
12.3.6 Exponential Contrast Function	330
12.3.7 Product Contrast Function with (α, β) -Index	330
12.4 Problems	331
13 Statistical Submanifolds	335
13.1 First Fundamental Form	335
13.2 Induced Dual Connections	336
13.3 Dual Second Fundamental Forms	337
13.4 Generalized Shape Operator	340
13.5 Mean Curvature Vector Fields	342
13.6 Gauss–Codazzi Equations	346
13.7 Induced Skewness Tensor	349
13.8 Curve Kinematics	352
13.9 Problems	353
Appendix A Information Geometry Calculator	357
A.1 Entropy	358
A.2 Informational Energy	359

A.3	Cross Entropy	359
A.4	Contrast Functions	359
A.5	Examples	360
	Bibliography	363
	Index	371

Geometric Modeling in Probability and Statistics

Calin, O.; Udriste, C.

2014, XXIII, 375 p. 22 illus., 3 illus. in color. With online files/update., Hardcover

ISBN: 978-3-319-07778-9
