# Contents

1 Introduction ................................................................. 1
  1.1 Overview of Digital Microfluidics .................................. 4
    1.1.1 Theory of Electrowetting-on-Dielectric ...................... 4
    1.1.2 Hardware Platform ............................................. 7
    1.1.3 Sensing Systems ................................................. 8
    1.1.4 Fault Models .................................................... 12
  1.2 Computer-Aided Design and Optimization ........................ 14
    1.2.1 Design Flow for Digital Microfluidic Biochips ............ 14
    1.2.2 Testing Techniques ............................................. 16
    1.2.3 Error Recovery .................................................. 18
    1.2.4 Pin-Assignment Methods ...................................... 18
    1.2.5 Chip-Level Design .............................................. 21
  1.3 Outline of the Book .................................................. 23

References ..................................................................... 24

2 Error-Recovery in Cyberphysical Biochips ........................... 27
  2.1 Motivation and Related Prior Work ................................ 27
  2.2 Overview of Cyberphysical Biochips ............................... 30
    2.2.1 Sensing Systems ............................................... 30
    2.2.2 “Physical-Aware” Software .................................... 34
    2.2.3 Interfaces Between Biochip and Control Software ......... 34
  2.3 Reliability-Driven Error-Recovery .................................. 36
    2.3.1 Error Recovery Strategies ...................................... 36
    2.3.2 Reliability Consideration in Error-Recovery ............... 39
    2.3.3 Comparison Between Two Sensing Schemes ................ 41
  2.4 Error Recovery and Dynamic Re-synthesis ........................ 43
    2.4.1 Off-Line Data Preparation Before Bioassay Execution ...... 44
    2.4.2 On-Line Monitoring of Droplets and Re-synthesis of the Bioassay .............................................. 45

5 Optimization of On-Chip Polymerase Chain Reaction .............. 117
  5.1 Introduction .................................................................... 117
  5.2 Cyberphysical Biochip with On-line Decision Making .......... 120
    5.2.1 Statistical Model for the Number of DNA Strands
          in a Droplet ....................................................... 121
    5.2.2 A Simplified Statistical Model for Amplification
          of DNA .............................................................. 121
    5.2.3 An Improved Statistical Model for Amplification
          of DNA .............................................................. 122
  5.3 Optimized Resource Placement Under Proximity Constraints ..... 123
    5.3.1 Device-Proximity Constraints on a PCR Biochip ............ 124
    5.3.2 Objective Function for Device Placement ................. 125
    5.3.3 Device Placement on a PCR Biochip ....................... 126
    5.3.4 Optimization of Device Placement Results .............. 128
  5.4 Bioassay-Specific Reservoir Allocation for PCR Biochip ....... 130
    5.4.1 Electrode Ring on Low-Cost Biochips ....................... 130
    5.4.2 Droplet Routing on Low-Cost PCR Biochip ............... 131
    5.4.3 Bioassay-Specific Reservoir Allocation .................... 133
  5.5 Visibility-Aware Droplet Detection .................................... 135
  5.6 Experimental Results ....................................................... 138
    5.6.1 Probabilistic Control of DNA Amplification ............... 138
    5.6.2 Layout Design for PCR Biochips ............................ 140
    5.6.3 Defect Tolerance of Layouts for PCR Biochips .......... 143
  5.7 Conclusion .................................................................... 144

6 Pin-Count Minimization for Application-Independent Chips ....... 147
  6.1 Motivation and Related Prior Work .................................. 147
  6.2 Analysis of Pin-Assignment ............................................. 149
    6.2.1 Pin-Actuation Conflicts ....................................... 149
    6.2.2 Control-Pin Sharing and Concurrent Movement of Droplets. 150
  6.3 ILP Model for Pin-Assignment ......................................... 155
6.4 Heuristic Optimization Method ........................................ 156
6.5 Manipulation of Large Droplets ........................................ 166
    6.5.1 Transportation of $2 \times$ Droplets ............................ 166
    6.5.2 Influence of Diagonal Electrodes .............................. 168
6.6 Scheduling of Fluid-Handling Operations ......................... 170
6.7 Simulation Results ...................................................... 173
    6.7.1 Commercial Biochips ........................................... 174
    6.7.2 Experimental Biochips ......................................... 177
    6.7.3 Simulation Results on Regular Array .......................... 180
6.8 Chapter Summary and Conclusions .................................. 182
References ........................................................................ 182

7 Pin-Limited Cyberphysical Microfluidic Biochip ..................... 185
7.1 Introduction .................................................................... 185
7.2 Wire Routing for General-Purpose Pin-Limited Biochips .......... 187
7.3 Design Flow for Pin-Limited Cyberphysical Biochips .......... 190
7.4 Simulation Results ...................................................... 191
    7.4.1 Results Derived by the Operation-Interdependency-Aware Synthesis Approach ..... 191
    7.4.2 Completion Time with Multiple Clock Frequencies on Pin-Limited Biochip ................. 192
7.5 Chapter Summary and Conclusions .................................. 193
References ........................................................................ 193

8 Conclusions .................................................................... 195
Hardware/Software Co-Design and Optimization for Cyberphysical Integration in Digital Microfluidic Biochips
Luo, Y.; Chakrabarty, K.; Ho, T.-Y.
2015, XII, 197 p. 98 illus., 60 illus. in color., Hardcover
