Contents

1 Basics of Adsorption Heat Pump Processes .................. 1
   1.1 Thermodynamics of Thermally Driven Heat Pumps .......... 2
   1.2 Working Pairs ............................................ 6
      1.2.1 Silica Gels ......................................... 7
      1.2.2 Composite Materials ................................. 8
      1.2.3 Activated Carbons ................................. 8
      1.2.4 Zeolites ........................................... 9
      1.2.5 New Trends ...................................... 14
   1.3 The Ideal Intermittent Adsorption Heat Pump Cycle. ....... 15
   1.4 Energetic Evaluation of the Real Intermittent Adsorption
       Heat Pump Cycle. ........................................ 21
   1.5 Basic Features and Design Requirements of Intermittent
       Adsorption Heat Pumps ..................................... 25
   1.6 Short Overview on Advanced Cycles ........................ 28
   References ................................................. 30

2 Adsorption Heat Exchangers .................................. 35
   2.1 Ideal Adsorber Design Requirements ........................ 35
   2.2 Overview on Adsorber Developments for Adsorption
       Heat Pumps ................................................ 36
   2.3 Introduction to the Concept of Coated Adsorbers ........... 42
   2.4 Methodologies for the Experimental Characterization
       of Zeolites ................................................ 44
   2.5 Experimental Methodologies to Verify the Performance
       of Adsorbers ............................................. 47
      2.5.1 Small Scale Large Pressure Jump (LPJ) ............... 47
      2.5.2 Small Scale Large Temperature Jump (LTJ) ............ 48
      2.5.3 Full Scale Experimental Setup for Cycling
            Characterization ....................................... 50
   References ................................................. 51
3 Hydrothermal Stability of Adsorbent Coatings

3.1 Hydrothermal Aging of Zeolites

3.2 Real-Time or Long-Term Heat Pump Aging Cycling Procedure

3.2.1 Description of the Set-up

3.2.2 Experimental Testing

3.3 Accelerated Aging Cycling Procedure

3.3.1 Description of the Set-up

3.3.2 Estimation of the Operating Conditions for AQSOA-FAMZ02 Zeolite

3.3.3 Experimental Testing

3.4 Very-Quick Aging Cycling Procedure

3.4.1 Description of the Set-up

3.4.2 Experimental Testing

References

4 Mechanical Stability of Adsorbent Coatings

4.1 Static Mechanical Tests

4.1.1 Flexural Test

4.1.2 Shear Test

4.1.3 Micro-hardness Test

4.1.4 Scratch Test

4.1.5 Pull-off Test

4.1.6 Peel Test

4.2 Dynamic Tests

4.2.1 Impact Test

4.2.2 Vibrational Test

4.3 Methods Comparison

4.4 Experimental Case History: Adhesion Quality Control on a Coated Adsorber
