Preface

Excel 2010 for Human Resource Management Statistics: A Guide to Solving Practical Problems is intended for anyone looking to learn the basics of applying Excel’s powerful statistical tools to their human resource management courses or work activities. If understanding statistics isn’t your strongest suit, you are not especially mathematically-inclined, or if you are wary of computers, then this is the right book for you.

Here you’ll learn how to use key statistical tests using Excel without being overpowered by the underlying statistical theory. This book clearly and methodically shows and explains how to create and use these statistical tests to solve practical problems in human resource management.

Excel is an easily available computer program for students, instructors, and managers. It is also an effective teaching and learning tool for quantitative analyses in human resource management courses. The powerful numerical computational ability and the graphical functions available in Excel make learning statistics much easier than in years past. However, this is the first book to show Excel’s capabilities to more effectively teach human resource management statistics; it also focuses exclusively on this topic in an effort to render the subject matter not only applicable and practical, but also easy to comprehend and apply.

Unique features of this book:

• You will be told each step of the way, not only how to use Excel, but also why you are doing each step so that you can understand what you are doing, and not merely learn how to use statistical tests by rote.
• Includes specific objectives embedded in the text for each concept, so you can know the purpose of the Excel steps.
• Includes 159 color screen shots so that you can be sure you are performing the Excel steps correctly
• This book is a tool that can be used either by itself or along with any good statistics book.
• Practical examples and problems are taken from human resource management.
• Statistical theory and formulas are explained in clear language without bogging you down in mathematical fine points.

• You will learn both how to write statistical formulas using Excel and how to use Excel’s drop-down menus that will create the formulas for you.

• This book does not come with a CD of Excel files which you can upload to your computer. Instead, you’ll be shown how to create each Excel file yourself. In a work situation, your colleagues will not give you an Excel file; you will be expected to create your own. This book will give you ample practice in developing this important skill.

• Each chapter presents the steps needed to solve a practical human resource management problem using Excel. In addition, there are three practice problems at the end of each chapter so you can test your new knowledge of statistics. The answers to these problems appear in Appendix A.

• A “Practice Test” is given in Appendix B to test your knowledge at the end of the book. The answers to these practical human resource management problems appear in Appendix C.

This book is appropriate for use in any course in human resource management statistics (at both undergraduate and graduate levels) as well as for managers who want to improve the usefulness of their Excel skills.

Prof. Tom Quirk, a current Professor of Marketing at the George Herbert Walker School of Business & Technology at Webster University in St. Louis, Missouri (USA), teaches Marketing Statistics, Marketing Research, and Pricing Strategies. At the beginning of his academic career, Prof. Quirk spent six years in educational research at The American Institutes for Research and Educational Testing Service. He has published articles in The Journal of Educational Psychology, Journal of Educational Research, Review of Educational Research, Journal of Educational Measurement, Educational Technology, The Elementary School Journal, Journal of Secondary Education, Educational Horizons, and Phi Delta Kappan. In addition, Professor Quirk has written more than 60 textbook supplements in Management and Marketing, published more than 20 articles in professional journals, and presented more than 20 papers at professional meetings, including annual meetings of The American Educational Research Association, The American Psychological Association, and the National Council on Measurement in Education. He holds a B.S. in Mathematics from John Carroll University, both an M.A. in Education and a Ph.D. in Educational Psychology from Stanford University, and an M.B.A. from the University of Missouri-St. Louis.

Prof. “J.P.” Palmer-Schuyler is currently an Associate Professor of Human Resource Management in the Walker School of Business and Technology at Webster University in St. Louis, Missouri, USA, where she teaches undergraduate Human Resource Management as well as Organizational Behavior at the Master’s and Doctoral level. She received her MBA from the University of Nebraska-Lincoln and her Ph.D. from the University of Missouri-Columbia in Management. Her teaching awards include the Donald K. Anderson Graduate Student Teaching
Award at the University of Missouri and the William T. Kemper Award at Webster University. She is also a graduate of the Program for Excellence in Teaching at the University of Missouri. Her pedagogical research over the past 12 years includes articles in *Academy of Business Disciplines Journal* and *Regional Business Review*, and she has made conference presentations at the Organizational Behavior Teaching Conference, Academy of Management, Society for Industrial and Organizational Psychology, Southwest Academy of Management, Western Academy of Management, and Society for Advancement of Management.
