

Preface

The Computer Society of Iran (CSI) and Sharif University of Technology (SUT) are proud that the 2013 International Symposium on Artificial Intelligence and Signal Processing (AISP 2013) was held on December 25–26, 2013 in the Department of Computer Engineering at Sharif University of Technology, Tehran, Iran.

AISP 2013 is a premier artificial intelligence and signal processing event that brings together industry professionals and academics to exchange information on recent advances in the fields of artificial intelligence, signal processing, and emerging applications. Papers presented in the symposium were mainly on general topics of artificial intelligence aspects, signal processing techniques, and emerging applications.

The total number of submissions were 106 among which only 33 papers were accepted for oral presentation. The acceptance rate was near 30 %. All papers were peer reviewed by at least two expert reviewers. A booklet containing paper abstracts and conference schedule was distributed to all participants during the conference. The conference was held with the help of professional organizers and all sessions were held according to the symposium schedule.

We take this opportunity to thank all our colleagues in the scientific committee and also all reviewers whose support was one of the main factors for success in this symposium. In addition, we extend our appreciation to all members of the symposium organizing committee, scientific societies, and also to those who financially supported the symposium.

We hope more papers would be submitted to AISP 2014 and consequently more papers would be accepted for presentation in broader fields of artificial intelligence and signal processing.

December 2013
