## Contents

1 General Introduction ........................................................ 1  
1.1 The Paper and Paperboard Industry in the Global Market .......... 1  
1.2 General Aspects of Waste Management ............................... 2  
References ........................................................................ 5  

2 Generation of Waste in Pulp and Paper Mills .............................. 9  
2.1 Generation of Wastewater Treatment Sludge ......................... 12  
2.2 Generation of Deinking Sludge ........................................ 15  
References ........................................................................ 15  

3 Composition of Waste .............................................................. 19  
3.1 Composition of Solid By-Streams .................................. 19  
References ........................................................................ 28  

4 Pretreatment of Sludge ............................................................. 31  
4.1 Thickening ................................................................. 32  
4.2 Conditioning ............................................................... 33  
4.3 Dewatering ................................................................. 34  
4.4 Drying ........................................................................ 42  
References ........................................................................ 42  

5 New Technologies for Energy Recovery from Waste ..................... 45  
5.1 Pyrolysis ................................................................. 45  
5.2 Direct Liquefaction ....................................................... 48  
5.3 Wet Air Oxidation ........................................................ 50  
5.4 Super Critical Water Oxidation ....................................... 53  
5.5 Steam Reforming ......................................................... 57  
5.6 Gasification ............................................................... 58  
5.6.1 Plasma Gasification .............................................. 69  
5.6.2 Supercritical Water Gasification ............................... 71  
References ........................................................................ 74
