Contents

Exact Solutions and Conservation Laws of the Joseph-Egri Equation with Power Law Nonlinearity 1
Abdullahi Rashid Adem and Chaudry Masood Khalique

ML-α-Deconvolution Model in a Bounded Domain with a Vertical Regularization 7
Hani Ali

Solving the Linear Transportation Problem by Modified Vogel Method . . 13
D. Almaatani, S.G. Diagne, Y. Gningue and P. M. Takouda

Input-to-State Stability of Large-Scale Stochastic Impulsive Systems with Time Delay and Application to Control Systems 21
M. S. Alwan, X. Z. Liu and W.-C. Xie

Replicator Dynamics of Axelrod's Norms Games 29
Michael Andrews, Edward Thommes and Monica G. Cojocaru

Computing Least Squares Condition Numbers on Hybrid Multicore/GPU Systems 35
M. Baboulin, J. Dongarra and R. Lacroix

Coupled Spin Torque Nano-Oscillators: Stability of Synchronization 43
K. Beauvais, A. Palacios, R. Shaffer, J. Turtle, V. In and P. Longhini

Nonlinear Robust Control and Regulation Problems for Biomedical Dynamical Systems 49
Aziz Belmiloudi

A Model of Heat and Water Transport in Frozen Porous Media and Fractured Rock Masses 57
Michal Beneš, Lukáš Krupička and Radek Štefan

Set-valued Nonlinear Fredholm Integral Equations: Direct and Inverse Problem 65
M.I. Berenguer, H. Kunze, D. La Torre and M. Ruiz Galán

Stabilizing Role of Predators in Niche Construction Modeling 73
Faina S. Berezovskaya and Georgiy P. Karev

Strip Saturation Yield Model for a Piezoelectric Plate: A Study on Influence of Change in Poling Direction 81
R.R. Bhargava and Kamlesh Jangid

Strip-Saturation-Induction Model Mode-III Solution for Piezoelectromagnetic Strip 89
R. R. Bhargava and Pooja Raj Verma

Adaptive Matrix Transpose Algorithms for Distributed Multicore Processors 97
John C. Bowman and Malcolm Roberts

Accounting for Temperature when Modeling Population Health Risk Due to Air Pollution 105
Wesley S. Burr and Hwashin H. Shin

Discrete Prolate Spheroidal Sequences as Filters in Generalized Additive Models 113
Wesley S. Burr and Hwashin H. Shin

Time Series Analysis and Calibration to Option Data: A Study of Various Asset Pricing Models 121
Giuseppe Campolieti, Roman N. Makarov and Arash Soleimani Dahaj

An Application of the Double Skorokhod Formula 127
Cristina Canepa and Traian A. Pirvu

Multitaper Smoothed Minimum Statistics Noise Power Estimation 133
Ricardo Castellanos, Nurgun Erdol and Hanqi Zhuang

Design Considerations for Thermal Management of Electronics Enclosures 141
Rachele Cocks, David Clendenen and Ludovic Chretien

A CFD Optimization of Airflow Efficiency for an Electric Motor Driven Centrifugal Fan System for Residential HVAC Applications 149
Rachele Cocks and Joshua Westhoff

Adoption of New Products with Global and Local Social Influence in a 2D Characteristics Space 155
Monica G. Cojocaru, C. Hogg, C. Kuusela and E. W. Thommes

On the Group Analysis of a Modified Novikov Equation 161
Priscila Leal da Silva and Igor Leite Freire

Implication of Stochastic Resonance on Neurological Disease Quantification 167
T. K. Das, N. Rajakumar and M. Jog

Impact of Excess Mortality on the Dynamics of Diseases Spread by Ectoparasites 177
Attila Dénes and Gergely Röst

Temperature Induced Cubic-to-Tetragonal Transformations in Shape Memory Alloys Using a Phase-Field Model 183
R. Dhote, H. Gomez, R. Melnik and J. Zu

A Study of Brain Biomechanics Using Hamilton's Principle: Application to Hydrocephalus 191
Corina S. Drapaca and Justin A. Kauffman

A Mathematical Model for Treatment Selection Literature 199
G. Duncan and W. W. Koczkodaj

New Exceptional Orthogonal Polynomials (EOPs) and Nonlinear Algebras Associated to the Quantum System 205
D. Dutta

Avoiding the Coordinate Singularity Problem in the Numerical Solution of the Dirac Equation in Cylindrical Coordinates 211
F. Fillion-Gourdeau, E. Lorin and A. D. Bandrauk

Symmetry Reductions and Exact Solutions of a Generalized Fisher Equation 219
M. L. Gandarias, M. Rosa and M. S. Bruzon

Numerical Simulation of Potential Maxwell's Equations in the Harmonic Regime 227
María Teresa González Montesinos and Francisco Ortegón Gallego

Supply Chain Flexibility Metrics Evaluation 235
Mujde Erol Genevois, Ugur Gure and Kaya Ocakoglu

Estimation of Abundance from a Correlated Binary Time Series 241
Julie Horrocks, Matthew Rueffer, David Hamilton and SarahWong

Design, Fabrication, and Testing of Hybrid Energy Harvesting Units 247
Mohammed Ibrahim and Armaghan Salehian

Markov Chain Monte Carlo Analysis of Trophic Cascade in Yellowstone after Reintroduction of Wolves 253
Darryl Johnson, David J. Klinke, Qing Wang, Morgan Condon and Zhijun Wang

Discovering Forward Invariant Sets for Nonlinear Dynamical Systems .. 259
James Kapinski and Jyotirmoy Deshmukh

Investigation of Salts Behavior at Liquid–Liquid Interfaces 265
N. P. Khiabani, A. Bahramian, M. Soltani, P. Pourafshary, K. Sarikhani, P. Chen and M. R. Ejtehadi

Monte Carlo Study of the Random Image Area Estimation by Pairwise Comparisons 271
W.W. Koczkodaj, A. Almowanes, T. Kakiashvili and G. Duncan

Controllability of Second Order Impulsive Differential Systems in Banach Spaces 277
Meili Li and Jungang Tian

SIAC Filtering for Nonlinear Hyperbolic Equations 285
Xiaozhou Li and Jennifer K. Ryan

Structural Analysis and Dummy Derivatives: Some Relations 293
R. McKenzie and J. Pryce

On the Exact Solutions of the Klein–Gordon–Zakharov Equations 301
Isaiah Elvis Mhlanga and Chaudry Masood Khalique

Collision Effects of Solitary Waves for the Gardner Equation 309
Abdus Sattar Mia

Conservation Laws for a Generalized Coupled Boussinesq System of KdV–KdV Type 315
Tshepo Edward Mogorosi, Ben Muatjetjeja and Chaudry Masood Khalique

Exact Solutions of a Coupled Boussinesq Equation 323
Dimpho Millicent Mothibi and Chaudry Masood Khalique

Recent Advances in Error Control B-spline Gaussian Collocation Software for PDEs 329
Paul Muir and Jack Pew

Downscaling of Regional Climate Scenarios within Agricultural Areas Across Canada with a Multivariate, Multisite Model 335
Nathaniel K. Newlands, Weixun Lu and Tracy A. Porcelli

Iterative Techniques for Nonlinear Periodic Boundary Value Problems (PBVPs) via Initial Value Problems 341
David H. Dezern and Sudhakar G. Pandit

Fast and Stable Algorithms for Discrete Sine Transformations having Orthogonal Factors 347
Sirani M. Perera and Vadim Olshevsky

Interactive Computational Search Strategy of Periodic Solutions in Essentially Nonlinear Dynamics 355
Lev F. Petrov

Explosive Behavior in the Black–Derman–Toy Model 361
Dan Pirjol

Exploiting Block Triangular form for Solving DAEs: Reducing the Number of Initial Values 367
J. Pryce, N. Nedialkov, G. Tan and R. McKenzie

Analysis and Visualization of a Many-Objective Optimization Landscape Design Problem 375
Luis A. Rivera-Zamarripa, Steven A. Roberts and Nareli Cruz-Cortés

Evolutionary Multiobjective Optimization (EOM) Design for Peri-urban Greenlands Systems: Metric Implementations 381
S. A. Roberts, Nareli Cruz-Cortés and G. B. Hall

Effect of Boundary Absorption on Dispersion of a Solute in Pulsatile Casson Fluid Flow 389
B. T. Sebastian and P. Nagarani

Stability Analysis of a Human–*Phlebotomus papatasi*–Rodent Epidemic Model 397
Schehrazad Selmane

Computational Thinking and Simulation in Teaching Science and Mathematics 405
Hasan Shodiev

Mathematical and Computational Modeling of Noise Characteristics of Channel Amplifiers 411
Alla Shymanska

Parameter Range Reduction in ODE Models in the Presence of Partial Data Sets 419
Andrew Skelton and Allan R. Willms

Stabilization of Impulsive Systems via Open-Loop Switched Control 425
Peter Stechlinski and Xinzhi Liu

Mathematics-in-Industry Study Group Projects from Australia and New Zealand in the Past Decade 433
Winston L. Sweatman

Symmetric Four-Body Problems 439
Winston L. Sweatman

A Simple Method for Quasilinearity Analysis of DAEs 445
Guangning Tan, Nedialko S. Nedialkov and John D. Pryce

Nondeterministic Fuzzy Operators 451
Fairouz Tchier

The Ideal Free Distribution and Evolutionary Stability in Habitat Selection Games with Linear Fitness and Allee Effect 457
Ross Cressman and Tan Tran

An Input–Output Analysis Approach in Waste of Electrical and Electronic Equipments 465
Ziya Ulukan, Emre Demircioglu and Mujde Erol Genevois

A Free Boundary Approach to Solve the Equilibrium Equations of a Membrane 473
Giuseppe Viglialoro, Álvaro González and Juan Murcia

Approximations to Intractable Spatial Econometric Models and Their Solutions Through Global Optimization 481
Renata Wachowiak-Smolíková, Mark P. Wachowiak and Jonathan Zimmerling

Application of Advanced Diagonalization Methods to Quantum Spin Systems 489
Jie Yu Wang and Ralf Meyer

The Effects of Body Fluid on Cheyne–Stokes Respiration 495
Marianne Wilcox and Allan R. Willms

Solving a Large-Scale Thermal Radiation Problem Using an Interoperable Executive Library Framework on Petascale Supercomputers 501
Kwai Wong, Eduardo D'Azevedo, Zhiang Hu, Andrew Kail and Shiquan Su

Optimal Transport and Placental Function 509
Qinglan Xia, Carolyn Salafia and Simon Morgan

Localized Band-Limited Representation and Robust Interpolative Image Manipulation 517
H. Xiao, M. C. Gonzalez and N. Fugate

A Monte Carlo Measure to Improve Fairness in Equity Analyst Evaluation 525
John Robert Yaros and Tomasz Imieliński

Wake Topology for Steady Flow Past an Inclined Elliptic Cylinder 533
Peter J. S. Young

Leading Unstable Linear Systems to Chaos by Chaos Entanglement 541
Hongtao Zhang, Xinzhi Liu and Xianguo Li

Impulsive Control and Synchronization of Spatiotemporal Chaos in the Gray–Scott Model 549
Kexue Zhang, Xinzhi Liu and Wei-Chau Xie
