## Contents

1 **Similarity and Granulation** .................................................. 1
   1.1 Introduction ................................................................. 1
   1.2 Similarity ................................................................. 2
      1.2.1 Graded Similarity ....................................................... 3
   1.3 Granulation ................................................................. 4
   1.4 On Selected Approaches to Granulation .............................. 7
      1.4.1 Granules from Binary Relations ..................................... 8
      1.4.2 Granules in Information Systems from Indiscernibility .......... 8
      1.4.3 Granules from Generalized Descriptors .......................... 9
   1.5 A General Approach to Similarity Based Granules ................. 9
      1.5.1 Operations on Granules ............................................. 10
      1.5.2 An Example of Granule Fusion: Assembling ..................... 10
   References ................................................................. 12

2 **Mereology and Rough Mereology: Rough Mereological Granulation** .......... 17
   2.1 Mereology ................................................................. 17
      2.1.1 Mereology of Leśniewski ........................................... 17
   2.2 Rough Mereology .......................................................... 21
      2.2.1 Rough Inclusions ...................................................... 22
   2.3 Granules from Rough Inclusions ...................................... 25
      2.3.1 Rough Inclusions on Granules ...................................... 27
   2.4 General Properties of Rough Mereological Granules .............. 28
   2.5 Ramifications of Rough Inclusions ................................... 29
   References ................................................................. 30

3 **Learning Data Classification: Classifiers in General and in Decision Systems** ............................................. 33
   3.1 Learning by Machines: A Concise Introduction ..................... 33
      3.1.1 Bayes Classifier ...................................................... 34
   References ................................................................. 34
