

Contents

1	Classical Mechanics	1
1.1	Inertial Frame	1
1.2	Mechanics of a Single Particle	2
1.2.1	Newton's Equation of Motion	2
1.2.2	Work	4
1.2.3	Potential Energy	6
1.2.4	Kinetic Energy	9
1.2.5	Conservation of Energy	10
1.3	Mechanics of Many Particles	11
1.3.1	Mechanical Energy of a Many-Particle System	12
1.4	Center of Mass	13
1.5	Hamilton's Principle	14
1.5.1	Lagrangian and Action	14
1.5.2	Generalized Coordinates	17
1.5.3	Many Mechanical Degrees of Freedom	20
1.6	Momentum and Energy: Definitions	24
1.7	†Energy Function and Energy	26
1.8	Conservation Laws and Symmetry	28
1.8.1	Conservation of Linear Momentum	29
1.8.2	‡Conservation of Angular Momentum	31
1.8.3	Conservation of Energy	32
1.9	Hamilton's Equations of Motion	34
1.10	†Routhian	37
1.11	Poisson Bracket	39
1.12	Frequently Used Symbols	41
	References and Further Reading	42
2	Thermodynamics	43
2.1	The First Law of Thermodynamics	43
2.2	Quantifying Heat	46
2.3	‡A Typical Expression for dW	47

2.4	The Second Law of Thermodynamics	48
2.5	Equilibrium of an Isolated System	49
2.6	Fundamental Equations	50
2.6.1	Closed System of Fixed Composition	51
2.6.2	Open System	53
2.6.3	Heat Capacities	55
2.6.4	‡Ideal Gas	56
2.6.5	†Heat Flow into an Open System	59
2.7	Role of Additional Variables	60
2.8	Entropy Representation	62
2.8.1	Condition of Equilibrium	62
2.8.2	Equality of Temperature	64
2.8.3	Direction of a Spontaneous Process	66
2.8.4	†Very Short Remark on the Stability of Equilibrium	67
2.9	Energy Representation	68
2.9.1	Condition of Equilibrium	69
2.9.2	Reversible Work Source	71
2.9.3	†Condition of Perfect Equilibrium	72
2.9.4	†Closed System with a Chemical Reaction	75
2.9.5	†Maximum Work Principle	76
2.10	Euler Relation	82
2.11	Gibbs–Duhem Relation	84
2.12	‡Gibbs Phase Rule	85
2.13	Free Energies	87
2.13.1	Fixing Temperature	87
2.13.2	Condition of Equilibrium	87
2.13.3	Direction of a Spontaneous Process	89
2.13.4	† W^{rev} and a Spontaneous Process	90
2.13.5	Fundamental Equation	92
2.13.6	Other Free Energies	93
2.14	‡Maxwell Relation	96
2.15	‡Partial Molar Quantities	97
2.16	Graphical Methods	100
2.16.1	Pure Systems: \underline{F} Versus \underline{V} (Constant T)	101
2.16.2	Binary Mixtures: \underline{G} Versus x_1 (Constant T and P)	103
2.17	Frequently Used Symbols	109
	References and Further Reading	110
3	Classical Statistical Mechanics	111
3.1	Macroscopic Measurement	111
3.2	Phase Space	114
3.3	Ensemble Average	115
3.4	Statistical Equilibrium	118
3.5	Statistical Ensemble	119
3.6	Liouville’s Theorem	120

3.7	Significance of H	123
3.8	†The Number of Constants of Motion	123
3.9	Canonical Ensemble	125
3.10	Simple Applications of Canonical Ensemble	129
3.10.1	Rectangular Coordinate System	129
3.10.2	Equipartition Theorem	133
3.10.3	Spherical Coordinate System	134
3.10.4	†General Equipartition Theorem	137
3.11	Canonical Ensemble and Thermal Contact	137
3.12	Corrections from Quantum Mechanics	141
3.12.1	A System of Identical Particles	141
3.12.2	Implication of the Uncertainty Principle	144
3.12.3	Applicability of Classical Statistical Mechanics	147
3.13	†A Remark on the Statistical Approach	148
3.14	‡Expressions for P and μ	149
3.14.1	‡Pressure	150
3.14.2	‡Chemical Potential	152
3.15	†Internal Energy	155
3.15.1	†Equilibrium in Motion?	155
3.15.2	†From a Stationary to a Moving Frame	157
3.15.3	†Back to the Stationary Frame	160
3.16	†Equilibrium of an Accelerating Body	162
3.16.1	†Linear Translation	162
3.16.2	†Rotation	163
3.17	Frequently Used Symbols	167
	References and Further Reading	168
4	Various Statistical Ensembles	169
4.1	Fluctuations in a Canonical Ensemble	169
4.2	Microcanonical Ensemble	171
4.2.1	Expression for ρ	171
4.2.2	Choice of ΔE	173
4.2.3	Isolated System	174
4.3	Phase Integral in Microcanonical Ensemble	175
4.4	†Adiabatic Reversible Processes	179
4.5	Canonical Ensemble	180
4.5.1	Closed System Held at a Constant Temperature	181
4.5.2	Canonical Distribution	183
4.5.3	Classical Canonical Partition Function	189
4.5.4	Applicability of Canonical Ensemble	189
4.6	‡Isothermal–Isobaric Ensemble	190
4.7	Grand Canonical Ensemble	196
4.8	Frequently Used Symbols	203
	References and Further Reading	204

5	Simple Models of Adsorption	205
5.1	Exact Solutions	205
5.1.1	Single Site	205
5.1.2	†Binding Energy	207
5.1.3	Multiple Independent Sites	209
5.1.4	Four Sites with Interaction Among Particles	211
5.2	Mean-Field Approximation	214
5.2.1	Four Sites with Interaction Among Particles	214
5.2.2	Two-Dimensional Lattice	216
5.3	Frequently Used Symbols	227
	Reference	228
6	Thermodynamics of Interfaces	229
6.1	Interfacial Region	229
6.2	Defining a System	231
6.3	Condition of Equilibrium	233
6.3.1	†Variations in the State of the System	233
6.3.2	Fixed System Boundaries	235
6.3.3	Reference System	237
6.3.4	Movable System Boundaries	238
6.3.5	Laplace Equation	239
6.4	Euler Relation	241
6.5	Gibbs–Adsorption Equation	242
6.6	Flat Interface	243
6.7	W^{rev} as a Measure of Stability	244
6.7.1	Exact Expression	245
6.7.2	‡Classical Theory Approximations	247
6.7.3	†Thermodynamic Degrees of Freedom	248
6.7.4	Small Nucleus	249
6.8	†Gibbs–Tolman–Koenig Equation	250
6.9	†Interfacial Properties	254
6.10	Frequently Used Symbols	256
	References and Further Reading	257
7	Statistical Mechanics of Inhomogeneous Fluids	259
7.1	Functional	259
7.1.1	Definition	259
7.1.2	Functional Derivative	261
7.2	Density Functional Theory	265
7.2.1	Equilibrium Density Profile	266
7.2.2	Microscopic Definition of Density	267
7.2.3	Ω for a Nonequilibrium Density Profile	268
7.2.4	†A Few Remarks on $\Omega[n_a, \psi_b]$	270
7.3	Formal Development	272
7.3.1	Definitions	273

7.3.2	Key Properties of the Density Functional	273
7.3.3	†Proofs of Theorems	275
7.4	Construction of a Density Functional	279
7.4.1	Variation of the External Field	279
7.4.2	Variation of the Intermolecular Potential: Case 1	280
7.4.3	Variation of the Intermolecular Potential: Case 2	281
7.4.4	Pair Distribution Function	283
7.4.5	Repulsive Potential	289
7.4.6	Radial Distribution Function	293
7.4.7	†Barker–Henderson Scheme	294
7.5	Hard-Sphere Fluid Under Gravity	297
7.6	Vapor–Liquid Coexistence	298
7.6.1	Phase Diagram	299
7.6.2	Interfacial Properties	301
7.7	‡Equations of State from the Radial Distribution Function	304
7.7.1	‡Compressibility Equation of State	305
7.7.2	‡Virial Equation of State	306
7.8	Frequently Used Symbols	306
	References and Further Reading	308
8	Quantum Formulation	309
8.1	Vector Space	309
8.1.1	Definition	310
8.1.2	Linear Independence	313
8.1.3	Basis	314
8.1.4	†Proofs of Theorems	314
8.1.5	Scalar Product Space	317
8.1.6	Orthonormal Basis	318
8.1.7	Functions	319
8.1.8	Linear Functional	319
8.1.9	Linear Operator	321
8.2	Kets, Bras, and Operators	321
8.2.1	Bra–Ket	322
8.2.2	Operator and Adjoint	324
8.2.3	Addition and Multiplication of Operators	326
8.2.4	Unitary Operator	327
8.2.5	Outer Product	328
8.3	Eigenkets and Eigenvalues	328
8.3.1	Definition	329
8.3.2	Closure relation	330
8.3.3	Matrix Representation	332
8.3.4	Commuting Observables	334
8.3.5	†Degenerate Eigenvalues	336
8.4	Postulates of Quantum Mechanics	338
8.5	‡Uncertainty Principle	340

8.6	‡Operator with Continuous Spectrum	342
8.6.1	‡Position Operator and Position Eigenkets	343
8.7	†Linear Translation	344
8.7.1	†Properties of Linear Translation	344
8.7.2	†Commutation Relations	346
8.7.3	†Momentum Eigenket	348
8.8	†Time Evolution Operator	350
8.9	† \hat{U}_t is Unitary	351
8.10	‡Formal Solution of the Schrödinger Equation	352
8.10.1	‡Time-Independent \hat{H}	352
8.10.2	†Time-Dependent \hat{H}	353
8.11	‡Heisenberg's Equation of Motion	356
8.11.1	‡Time-Independent \hat{H}	357
8.11.2	†Time-Dependent \hat{H}	358
8.12	Eigenstates of \hat{H}	358
8.13	‡Schrödinger Wave Equation	361
8.14	‡Harmonic Oscillator	367
8.14.1	‡Operator Method	367
8.14.2	‡Energy Eigenfunctions	370
8.15	†Ehrenfest's Theorem	372
8.16	Quantum Statistical Mechanics	377
8.16.1	Density Matrix	377
8.16.2	Statistical Equilibrium	378
8.16.3	Liouville's Theorem	380
8.16.4	Canonical Ensemble	381
8.16.5	Ideal Gas and Classical Limit	383
8.16.6	Microcanonical Ensemble	385
8.17	Frequently Used Symbols	386
	References and Further Reading	387
A	Vectors in Three-Dimensional Space	389
A.1	Arrow in Space	389
A.2	Components of a Vector	389
A.3	Dot Product	391
A.4	Unit Operator	393
A.5	†Schwarz Inequality	393
A.6	Cross Product	394
B	Useful Formulae	397
B.1	Taylor Series Expansion	397
B.1.1	Function of a Single Variable	397
B.1.2	Function of Multiple Variables	399
B.2	Exponential	400
B.3	Summation of a Geometric Series	401
B.4	Binomial Expansion	401
B.5	Gibbs–Bogoliubov Inequality	402

C	Legendre Transformation	403
	C.1 Legendre Transformation	403
	C.1.1 Representation of a Curve	404
	C.1.2 Legendre Transformation	405
	C.1.3 Inverse Legendre Transformation	406
D	Dirac δ-Function	409
	D.1 Definition of $\delta(x)$	409
	D.2 Basic Properties of the δ -Function	413
	D.3 Weak Versus Strong Definitions of the δ -Function	415
	D.4 Three-Dimensional δ -Function	416
	D.5 †Representation of the δ -Function	417
