

Contents

1 The Influence of the Chemical Composition of Food Packaging Materials on the Technological Suitability: A Matter of Food Safety and Hygiene	1
1.1 Food Safety and Packaging Materials	2
1.2 Regulatory Aspects in the EU: The Current Situation	7
1.3 The Declaration of Food Contact Compliance.	8
1.4 The Problem of the Technological Suitability of Food Packaging Materials	12
1.5 The Predictable Behaviour of Food Packaging Materials in ‘Normal Conditions’. Practical Applications	14
References.	15
2 Inorganic Contaminants of Food as a Function of Packaging Features	17
2.1 Introduction	18
2.2 Legislation	20
2.3 Analytical Methods	22
2.4 Metal Contamination and Toxicology	23
2.4.1 Aluminium	24
2.4.2 Tin.	24
2.4.3 Lead	25
2.4.4 Cadmium	25
2.4.5 Arsenicum	25
2.4.6 Rapid Alert System for Food and Feed	25
2.5 Packaging Materials: Examples of Applications	26
2.5.1 Stainless Steel and Glass	26
2.5.2 Metallic Cans and Tubes	26
2.5.3 Regenerated Cellulose Films	30
2.5.4 Plastic Materials	30
2.5.5 Active and Intelligent Packaging: Nanotechnologies.	32

2.6	Metals, Diet and Preserved Foods	34
2.7	Conclusions	38
	References	38
3	Plasticisers Used in PVC for Foods: Assessment of Specific Migration	43
3.1	Introduction	44
3.1.1	Phthalates	45
3.1.2	Epoxidised Soybean Oil	46
3.1.3	Other Monomeric Plasticisers	47
3.1.4	Polyadipates	49
3.2	Analytical Controls of Specific Migration Limits in Foods and Food Simulants	50
3.2.1	Methods for the Analysis of Phthalates	50
3.2.2	QuEChERS Method: A Case Study	51
3.2.3	Analysis Methods for ATBC, DBS, DEHA, DINCH, Mono and Partially Acetated Diglycerides of Fatty Acids	53
3.2.4	Analytical Method for ESBO in Foods	54
3.2.5	Analysis of Polyadipates	56
3.3	Conclusions	59
	References	60
4	Organic Food Packaging Contaminants: New and Emerging Risks	63
4.1	The Food Industry and the HACCP Approach	65
4.2	Known Chemical Risks in the Food Industry and the Connection with Food Packaging Materials	68
4.3	Most Known Organic Contaminants in Food Packaging Materials: The European Viewpoint	71
4.4	Other Problems: Substances of Very High Concern	74
	References	76
5	Chemical and Microbiological Aspects of the Interaction Between Food and Food Packages	79
5.1	Introduction	80
5.2	Packaging Materials As a Source of Microflora in Foods	80
5.3	Survival Rate of Micro-organisms on the Surface of Various Packaging Materials	84
5.4	Adhesion and Formation of Biofilms on Packaging Surfaces	84
5.5	Influence of Packaging Damages on the Behaviour of Micro-organisms	89
5.6	Determinants of Microbial Penetration on a Liquid and with Aerosol Medium	92
5.7	Determination of the Minimum Leak for Penetration of Micro-organisms Through the Package	95

5.8 Interactions of Micro-organisms with Packages 97

5.9 Forecasting the Stability of Packaging Materials. 100

6 Basic Principles of Corrosion of Food Metal Packaging. 105

6.1 Introduction 106

6.1.1 Basic Principles of Corrosion. 106

6.1.2 Thermodynamic Condition of the Occurring
of a Spontaneous Corrosion Process 107

6.1.3 Kinetic Aspects of the Corrosion Processes:
Polarisation Phenomena 111

6.2 The Metal Packaging 111

6.2.1 Internal Corrosion of Metal Packages 113

6.3 Tinplate. 113

6.3.1 Tin as the Anode in the Tin–Iron Couple 116

6.3.2 Iron as Anode in the Tin–Iron Couple 119

6.3.3 Morphological Aspects of the Internal Corrosion
of Plain Tinplate Cans 120

6.3.4 Morphological Aspects of the Corrosion
of Cans with Lacquered Body and Can Ends. 121

6.3.5 Variables Influencing Tinplate Corrosion. 121

6.3.6 Phenomena of Sulphuration 127

6.3.7 Inhibitors of Corrosion. 128

6.4 Use of Tin-Free Steel in the Industry of Containers
for Canned Foods 129

6.4.1 Aluminium in the Packaging of Canned Foods 129
