

Contents

1	General Principles	1
1.1	Multicomponent Systems	1
1.1.1	Multicomponent Flows	1
1.1.2	Multicomponent Transport	2
1.1.3	Application of Operator Splitting Methods to Multicomponent Flow and Transport Problems	3
1.2	Multiscale Systems	4
1.2.1	Multiscale Modelling	4
1.2.2	Multiscale Methods	5
1.2.3	Application of Different Multiscale Methods to Multiscale Problems	5
1.3	Multicomponent Analysis	9
1.3.1	Additive and Multiplicative Splitting Methods	9
1.3.2	Iterative Splitting Methods	11
1.3.3	Application of the Operator Splitting Methods to Multiscale Problems	12
1.4	Multiscale Analysis	15
1.4.1	Analytical Methods	16
1.4.2	Multiscale Averaging	17
1.4.3	Perturbation Methods	17
1.4.4	Computational Singular Perturbation Method	20
1.4.5	Alternative Modern Systematic Model Reduction Methods of Multiscale Systems	21
1.4.6	Multiscale Expansion (Embedding of the Fast Scales)	24
	References	28

- 2 Theoretical Part: Functional Splitting** 33
 - 2.1 Ideas of the Functional Splitting. 33
 - 2.1.1 Flow Equations 33
 - 2.1.2 Decomposition of Convection-Diffusion-Reaction Problems. 37
 - 2.1.3 Functional Splitting with Respect to the Multiscale Approach 39
 - References 42

- 3 Algorithmic Part** 45
 - 3.1 Introduction. 45
 - 3.2 Iterative Methods 46
 - 3.2.1 Iterative Schemes 46
 - 3.2.2 Reformulation to Waveform Relaxation Scheme. 47
 - 3.3 Additive Methods. 49
 - 3.3.1 Additive Splitting Schemes 49
 - 3.3.2 Higher Order Additive Splitting Method 51
 - 3.3.3 Iterative Splitting Method 54
 - 3.4 Parallelization 55
 - 3.4.1 Time Parallelization: Parareal Algorithm as an Iterative Solver 55
 - 3.4.2 Operator Parallelization: Operator Splitting Method 58
 - 3.4.3 Sequential Operator Splitting Method 59
 - 3.4.4 Parallel Operator Splitting Method: Version 1 60
 - 3.4.5 Parallel Operator-Splitting Method: Version 2 60
 - 3.4.6 Iterative Splitting Scheme 61
 - 3.4.7 Spatial Parallelization Techniques. 62
 - References 68

- 4 Models and Applications** 71
 - 4.1 Multicomponent Fluids 71
 - 4.1.1 Multicomponent Transport Model for Atmospheric Plasma: Modelling, Simulation and Application 72
 - 4.1.2 Multicomponent Fluid Transport Model for Groundwater Flow 84
 - 4.1.3 Conclusion 89
 - 4.2 Multicomponent Kinetics 89
 - 4.2.1 Multicomponent Langevin-Like Equations. 89
 - 4.2.2 Introduction to the Model Equations. 91
 - 4.2.3 Analytical Methods for Mixed Deterministic–Stochastic Ordinary Differential Equations 92
 - 4.2.4 Conclusion 93
 - 4.3 Additive Operator Splitting with Finite-Difference Time-Domain Method: Multiscale Algorithms 94

4.3.1	Introduction	94
4.3.2	Introduction FDTD Schemes	94
4.3.3	Additive Operator Splitting Schemes	97
4.3.4	Application to the Maxwell Equations	99
4.3.5	Practical Formulation of the 3D-FDTD Method	103
4.3.6	Explicit Discretization	104
4.3.7	Combination: Discretization and Splitting	106
4.3.8	Practical Formulation of the 3D-AOS-FDTD Method	107
4.3.9	Discretization of the Equations with the AOS	108
4.3.10	Transport Equation Coupled with an Electro-magnetic Field Equations	111
4.4	Extensions of Particle in Cell Methods for Nonuniform Grids: Multiscale Ideas and Algorithms	115
4.4.1	Introduction of the Problem	116
4.4.2	Introduction of the Extended Particle in Cell Method	117
4.4.3	Mathematical Model	118
4.4.4	Discretization of the Model	119
4.4.5	2D Adaptive PIC	135
4.4.6	Application: Multidimensional Finite Difference Method	142
4.4.7	Application: Shape Functions for the Multidimensional Finite Difference Method	143
4.4.8	Simple Test Example: Plume Computation of Ion Thruster with 1D PIC Code	145
4.4.9	Conclusion	149
	References	149
5	Engineering Applications	153
5.1	Multiscale Methods for Langevin-Like Equations	153
5.1.1	Introduction of the Problem	154
5.1.2	Introduction of the 1D Model Equations	158
5.1.3	Analytical Methods for Mixed Deterministic–Stochastic Ordinary Differential Equations	159
5.1.4	A–B Splitting with Analytical Methods for Mixed Deterministic–Stochastic Ordinary Differential Equations	161
5.1.5	Improved A–B Splitting Scheme: Predictor–Correction Idea	162
5.1.6	Improved Explicit Scheme Based on the Predictor–Correction Idea	163
5.1.7	CFL Condition for the Explicit Schemes	164
5.1.8	Numerical Examples	165
5.1.9	Conclusion	174

5.2	Multiscale Problem in Code Coupling: Coupling Methods for the Aura Fluid Package	175
5.2.1	Introduction.	175
5.2.2	Mathematical Model.	176
5.2.3	Splitting Methods.	177
5.2.4	Modified A–B Splitting Method: Only One Exchange to Operator B	179
5.2.5	Coupling of Initial Dates and Multiscale Approach.	181
5.2.6	Error Estimates	181
5.2.7	A Priori Error Estimates for the Splitting Scheme.	182
5.2.8	A Posteriori Error Estimates for the Splitting Scheme.	183
5.2.9	Optimization for the Heat- and Radiation Equation: Newton’s Method for Solving the Fixpoint Problem.	184
5.2.10	The Modified Jacobian Newton Methods and Fixpoint Iteration Methods	185
5.2.11	Parallelization: Parareal.	190
5.2.12	Test Example: Simple Car Body	191
5.2.13	Conclusion	193
5.3	Multiscale Methods for Levitron Problem: Iterative Implicit Euler Methods as Multiscale Solvers	193
5.3.1	Introduction.	194
5.3.2	Unconstraint Hamiltonian of the Levitron Problem.	195
5.3.3	Integrator for Unconstraint Hamiltonian	196
5.3.4	Integrator with Lagrangian Multiplier (Constraint Hamiltonian).	199
5.3.5	Numerical Experiments.	200
5.3.6	Conclusions and Discussions.	201
5.4	Particle Method as Multiscale Problem: Adaptive Particle in Cell with Numerical and Physical Error Estimates	202
5.4.1	Introduction.	203
5.4.2	Mathematical Model.	204
5.4.3	Numerical Errors	206
5.4.4	Absolute Error Based on the Initialization and Right-Hand Side	217
5.4.5	Error Reduction with Respect to SPDE (Stochastic Partial Differential Equations)	219
5.4.6	Algorithmic Ideas to Overcome the Self-Force Problems	220
5.4.7	Absolute and Statistical Errors.	224
5.4.8	Scaling of the Error and Analytical Error	226
5.4.9	Numerical Results	228
5.4.10	Conclusion	229

- 5.5 A Multicomponent Transport Model for Plasma and Particle Transport: Multicomponent Mixture 230
 - 5.5.1 Introduction. 230
 - 5.5.2 Mathematical Model for Plasma Mixture Problem 231
 - 5.5.3 Numerical Experiments. 235
 - 5.5.4 Iterative Scheme in Time (Global Linearization, Matrix Method) 237
 - 5.5.5 Conclusions and Discussions 243
- 5.6 Multicomponent Model of a Full-Scale Model of Glycolysis in *Saccharomyces cerevisiae*: Theory and Splitting Schemes 243
 - 5.6.1 Introduction. 244
 - 5.6.2 Introduction to the Pathway Model for the Glycolysis in *Saccharomyces cerevisiae* 245
 - 5.6.3 Model for Hynne Glycolysis 246
 - 5.6.4 Splitting Schemes for Partitioned Multicomponent Equations 250
 - 5.6.5 Splitting Errors and Time Step Control. 251
 - 5.6.6 Splitting Based on Separation of Eigenvectors (Assumption: Linearized Jacobian Matrix). 253
 - 5.6.7 Splitting Based on Fast and Slow Dynamics Based on the Idea of the CSP (Computational Singular Perturbation) (Assumption: Linear Jacobian). 254
 - 5.6.8 Strategies for the Decomposition 255
 - 5.6.9 Numerical Examples. 258
 - 5.6.10 Conclusion 260
- 5.7 Splitting Approach for a Plasma Resonance Spectroscopy 263
 - 5.7.1 Introduction. 263
 - 5.7.2 Modelling 264
 - 5.7.3 Splitting Schemes. 265
 - 5.7.4 Ideas of Numerical Examples of the Splitting Approaches 269
 - 5.7.5 Conclusions and Discussions 270
- 5.8 Multiscale Approach with Adaptive and Equation-Free Methods for Transport Problems with Electric Fields 270
 - 5.8.1 Introduction. 270
 - 5.8.2 Numerical Methods 272
 - 5.8.3 Full Explicit Scheme: With One Timescale Δt 273
 - 5.8.4 Adaptive Explicit Scheme: With Two Timescales $\delta t, \Delta t$ 274
 - 5.8.5 Equation-Free Explicit Scheme: With Two Timescale $\delta t, \Delta t$ 277
 - 5.8.6 Conclusions and Discussions 278

- 5.9 Multiscale Approach for Complex Fluids: Applications in Non-Newtonian Fluids 279
 - 5.9.1 Introduction. 279
 - 5.9.2 Non-Newtonian Fluid: Influence of the Microscopic Model. 279
 - 5.9.3 Non-Newtonian Fluid: Influence of the at the Boundary Flow at the Channel 282
- References 285
- Conclusions** 291
- Appendix** 295
- Glossary** 305
- Bibliography** 307
