

Contents

1	Definitions and Basic Principles	1
1.1	Typical Pressurized Water Reactor	1
1.2	Scope of Thermodynamics	3
1.3	Units	5
1.3.1	Fundamental Units	5
1.3.2	Thermal Energy Units	6
1.3.3	Unit Conversion	6
1.4	Classical Thermodynamics	7
1.5	Open and Closed Systems	8
1.6	System Properties	9
1.6.1	Density	10
1.6.2	Pressure	10
1.6.3	Temperature	12
1.7	Properties of the Atmosphere	14
1.8	The Laws of Thermodynamics	15
	References	16
2	Properties of Pure Substances	17
2.1	Introduction	17
2.2	Properties of Pure Substances—Phase Changes	19
2.2.1	Phases of Pure Substances	21
2.2.2	Equations of State	21
2.3	Ideal Gas	22
2.4	Real Gases and Vapors	24
2.4.1	Simple Real Gas Equations of State	24
2.4.2	Determining the Adjustable Parameters	25
2.4.3	Other Useful Two Parameter Equations of State	28
2.4.4	Common Equations of State with Additional Parameters	30
2.4.5	The Liquid-Vapor Region	37

2.5	<i>T-V</i> Diagram for a Simple Compressible Substance	39
2.6	<i>P-V</i> Diagram for a Simple Compressible Substance.	40
2.7	<i>P-V-T</i> Diagram for a Simple Compressible Substance	40
	References.	44
3	Thermodynamic Cycles.	45
3.1	Introduction	45
3.2	Work.	45
3.3	First Law of Thermodynamics	47
3.4	Enthalpy, <i>H</i>	47
3.5	Energy Equation	48
3.6	The Carnot Cycle	49
3.7	Entropy	51
3.8	Reactor Power Cycle.	54
3.9	Raising Boiler Pressure	56
3.10	Superheat.	57
3.11	Reheat.	57
3.12	Regeneration	58
	References.	59
4	Heat Transport System Thermal Hydraulics	61
4.1	Introduction	61
4.2	Reactor Heat Balance	65
4.3	Steam Generator Heat Transfer.	65
4.4	Primary Side Flow	68
4.5	Secondary Side Flow.	68
4.6	Pinch Technology.	69
	4.6.1 Pinch Technology.	70
	4.6.2 The Significance of the Pinch.	71
4.7	Approximate Solution	72
4.8	Sample Heat Balance for CANDU 600 MW Reactor.	75
4.9	Steam Generator with Preheater: Analytical Solution.	77
4.10	Steam Generator with Preheater: Numerical Solution.	83
4.11	Summary.	84
	References.	85
5	Energy Resources and the Role of Nuclear Energy.	87
5.1	The World's Energy Resources.	87
5.2	Today's Global Energy Market.	88
5.3	End of Cheap Oil and the Future of Energy.	89
5.4	What to Do About Coal.	92
5.5	The Future of Energy	93

5.6	Nuclear Reactors for Power Production	94
5.7	Future Nuclear Power Plant System	96
5.8	Next Generation of Nuclear Power Reactors for Power Production	97
5.9	Goals for Generation IV Nuclear Energy Systems	98
5.10	A Technology Roadmap for Generation IV Nuclear Energy Systems	100
5.11	The Description of the Six Most Promising Nuclear Power Systems	101
	References.	106
6	New Approach to Energy Conversion Technology	107
6.1	Power Conversion Study and Technology Options Assessment	107
6.2	Waste Heat Recovery	111
6.3	Power Conversion System Components	112
6.3.1	Heat Exchangers	112
6.3.2	Compact Heat Exchangers	125
6.4	Development of Gas Turbine	127
6.5	Turbomachinery	129
6.6	Heat Transfer Analysis	130
6.7	Combined Cycle Power Plant	131
6.8	Advanced Computational Materials Proposed for Gen IV Systems	134
6.9	Material Classes Proposed for Gen IV Systems.	136
6.10	Generation IV Materials Challenges	137
6.11	Generation IV Materials Fundamental Issues	138
6.12	Capital Cost of Proposed Gen IV Reactors.	138
6.12.1	Economic and Technical of Combined Cycle Performance	141
6.12.2	Economic Evaluation Technique.	141
6.12.3	Output Enhancement	143
	References.	146
7	Gas Turbine Working Principles	147
7.1	Introduction	147
7.2	Combined Cycle Power Conversion for New Generation Reactor Systems	152
7.3	System Efficiency and Turbine Cycles.	154
7.4	Modeling the Brayton Cycle.	155
7.5	Modeling the Rankine Cycle	156
7.6	The Combined Brayton-Rankine Cycle	156
7.7	Single and Multi-shaft Design	157

7.8 Working Principle of Combined Cycle
Gas Turbine (CCGT). 164

7.9 Gas Turbine Technology and Thermodynamics. 167

References. 171
