1	Introduction and History	1
1.1	Introduction	1
1.2	Theory	2
1.2.1	Bernoulli's Theorem	2
1.2.2	Method of Operation	3
1.3	Essential Requirements	7
1.3.1	General	7
1.3.2	With a Calibration in a Flowing Fluid	7
1.3.3	Without a Calibration in a Flowing Fluid	8
1.4	Introduction to Reynolds Number and Velocity Profile	8
1.5	Pipe Roughness	11
1.6	Accuracy	12
1.7	Pressure Loss	13
1.8	Standards	14
1.9	Advantages and Disadvantages	14
1.10	History	15
1.11	Conclusions	22
	Appendix 1.A: Sextus Julius Frontinus	23
	References	28
2	Orifice Design	33
2.1	Introduction	33
2.2	Orifice Plate	34
2.2.1	General	34
2.2.2	Flatness	36
2.2.3	Surface Condition of the Upstream Face of the Plate	37
2.2.4	Edge Sharpness	39
2.2.5	Plate Thickness E and Orifice (Bore) Thickness e	41
2.2.6	Circularity	45

2.3	The Pipe	45
2.3.1	General	45
2.3.2	Pressure Tappings	46
2.3.3	Pipe Roughness	51
2.3.4	Steps and Misalignment	57
2.3.5	Eccentricity	59
2.4	Dimensional Measurements	60
2.5	Orifice Fittings	61
2.6	Pressure Loss	62
2.7	Reversed Orifice Plates	65
2.8	Conclusions	67
	Appendix 2.A: Orifice Plates of Small Orifice Diameter	68
	References.	73
3	Venturi Tube Design.	77
3.1	Introduction	77
3.2	Type	79
3.2.1	General	79
3.2.2	Machined Convergent (5.2.9, 5.5.3 and 5.7.2 of ISO 5167-4:2003).	80
3.2.3	Rough-Welded Sheet-Iron Convergent (5.2.10, 5.5.4 and 5.7.3 of ISO 5167-4:2003).	80
3.2.4	'As Cast' Convergent (5.2.8, 5.5.2 and 5.7.1 of ISO 5167-4:2003).	80
3.2.5	Wider Range of Reynolds Number	81
3.3	Angles, Pressure Loss and Truncation	81
3.4	Dimensional Measurements	83
3.5	Steps and Straightness	84
3.6	Pressure Tappings	85
3.7	Effects of Roughness and Reynolds Number	87
3.8	High or Low Reynolds Number	87
3.9	Conclusions	90
	Appendix 3.A: Effect of Roughness: Computational Fluid Dynamics	90
	References.	95
4	General Design	97
4.1	Introduction	97
4.2	Impulse Lines.	97
4.2.1	General	97
4.2.2	Tapping Locations and Slopes of Impulse Lines	99
4.2.3	Density of the Fluids in Two Impulse Lines to Measure the Differential Pressure	101
4.2.4	Length of Impulse Lines	104

4.2.5	Blockage	105
4.2.6	Damping of the Pressure Signal or Resonance	106
4.3	Differential Pressure	106
4.3.1	Differential-Pressure Transmitters	106
4.3.2	Piezometer Rings	109
4.4	Static Pressure	110
4.5	Drain and Vent Holes (Through the Pipe Wall)	111
4.6	Temperature	111
4.6.1	General	111
4.6.2	Temperature Correction from Downstream of the Flowmeter to Upstream of It.	112
4.6.3	Using a Densitometer	115
4.6.4	Correction of Dimensions for Temperature.	116
4.7	Iteration.	117
4.8	Uncertainty	117
4.9	Cavitation	118
4.10	Diagnostics	118
4.11	Mixtures	119
4.12	Conclusions	120
	Appendix 4.A: Impulse Lines in Pulsating Flows	120
	Appendix 4.B: Measuring Low Differential Pressure at High Static Pressure	123
	References.	124
5	Orifice Discharge Coefficient	127
5.1	Introduction	127
5.2	History	128
5.3	The EEC/API Database	131
5.4	The Equation	134
5.4.1	Introduction	134
5.4.2	The Tapping Terms.	134
5.4.3	The C_{∞} and Slope Terms	144
5.4.4	A Term for Small Orifice Meters	146
5.4.5	The Complete Equation.	147
5.5	Quality of Fit	148
5.6	Equations and Comparison Between Them on the Basis of Deviations	155
5.6.1	The Reader-Harris/Gallagher (RG) Equation as in API 14.3.1:1990	155
5.6.2	The Stolz Equation in ISO 5167:1980.	156
5.6.3	Comparisons	156
5.7	Uncertainty	159
5.8	Conclusions	163

Appendix 5.A: Better Options for Tapping Terms	163
Appendix 5.B: Small Orifice Diameters Within the EEC/API Database	167
Appendix 5.C: The PR14 Equation and an Equation in Terms of Friction Factor	170
Appendix 5.D: The Effect on the Discharge-Coefficient Equation of Changing the Expansibility-Factor Equation.	172
Appendix 5.E: Orifice Plates in Pipes of Small Diameter or with No Upstream or with No Downstream Pipeline or with No Upstream and No Downstream Pipeline	175
Appendix 5.F: Lower Reynolds Number Limit for the Reader-Harris/Gallagher (1998) Equation	181
References.	183
