<b>Author biographies</b>	<b>vii</b>
<b>Abbreviations</b>	<b>xv</b>
<b>Introduction</b>	<b>xxi</b>
<b>1 Pathophysiology</b>	<b>1</b>
<i>Hervé Avet-Loiseau and Jill Corre</i>	
Chromosomal aberrations	1
Changes in gene expression	4
Bone marrow microenvironment and cytokine network	5
References	11
<b>2 Diagnosis and staging</b>	<b>15</b>
<i>Carlos Fernández de Larrea and Joan Bladé</i>	
Diagnostic criteria	15
Classification	16
Prognosis	19
Imaging	21
Response criteria	21
Minimal residual disease	25
Acknowledgement	27
References	27
<b>3 Treatment of transplant-eligible patients</b>	<b>29</b>
<i>Mohamad Mohty, Florent Malard, and Jean-Luc Harousseau</i>	
Induction therapy	29
Autologous transplantation	31
Consolidation	32
Maintenance	34
Allogeneic transplantation	36
References	38

<b>4 Treatment of elderly patients with myeloma</b>	<b>41</b>
<i>Eileen M Boyle, Charline Legrand, H��l��ne Demarquette, St��phanie Guidez Charles Herbaux, Xavier Leleu, and Thierry Facon</i>	
Introduction	41
Epidemiology	41
Biological and clinical features	42
Defining aims	43
What to aim for?	44
Disease-specific treatment options	44
Tailoring the treatment to the patient	50
Supportive care	56
Conclusion and perspectives	58
References	59
<b>5 Treatment of relapsed multiple myeloma</b>	<b>65</b>
<i>Michel Delforge</i>	
General considerations	65
Immediate treatment initiation or watchful waiting	66
To re-treat or not	68
Role of allogeneic transplantation	70
Optimizing drug-based treatment at relapse	70
Supportive care	73
Conclusion	74
References	74
<b>6 Bone disease</b>	<b>79</b>
<i>Evangelos Terpos</i>	
Introduction	79
Biology of multiple myeloma bone disease	79
Therapy	82
References	88
