Contents

Author biographies vii
Abbreviations xv
Introduction xxi

1 Pathophysiology 1
Hervé Avet-Loiseau and Jill Corre
Chromosomal aberrations 1
Changes in gene expression 4
Bone marrow microenvironment and cytokine network 5
References 11

2 Diagnosis and staging 15
Carlos Fernández de Larrea and Joan Bladé
Diagnostic criteria 15
Classification 16
Prognosis 19
Imaging 21
Response criteria 21
Minimal residual disease 25
Acknowledgement 27
References 27

3 Treatment of transplant-eligible patients 29
Mohamad Mohty, Florent Malard, and Jean-Luc Harousseau
Induction therapy 29
Autologous transplantation 31
Consolidation 32
Maintenance 34
Allogeneic transplantation 36
References 38
4 Treatment of elderly patients with myeloma 41

Eileen M Boyle, Charline Legrand, Hélène Demarquette, Stéphanie Guidez

Charles Herbaux, Xavier Leleu, and Thierry Facon

Introduction 41
Epidemiology 41
Biological and clinical features 42
Defining aims 43
What to aim for? 44
Disease-specific treatment options 44
Tailoring the treatment to the patient 50
Supportive care 56
Conclusion and perspectives 58
References 59

5 Treatment of relapsed multiple myeloma 65

Michel Delforge

General considerations 65
Immediate treatment initiation or watchful waiting 66
To re-treat or not 68
Role of allogeneic transplantation 70
Optimizing drug-based treatment at relapse 70
Supportive care 73
Conclusion 74
References 74

6 Bone disease 79

Evangelos Terpos

Introduction 79
Biology of multiple myeloma bone disease 79
Therapy 82
References 88
Handbook of Multiple Myeloma
Mohty, M.; Harousseau, J.-L. (Eds.)
2015, XXII, 90 p. 4 illus., Softcover
