## Contents

1 **Introduction** .................................................. 1
   1.1 Motivation .................................................. 1
   1.2 Research Objective and Approach ....................... 3

2 **Aluminium Die Casting and Its Environmental Aspects** ........... 7
   2.1 Industrial Value Chains and Aluminium Die Casting ........ 7
   2.1.1 Industrial Process, Process- and Value Chains .......... 7
   2.1.2 Aluminium Die Casting .................................. 15
   2.2 Environmental Aspects of Aluminium Die Casting .......... 36
   2.2.1 Energy and Resource Efficiency .......................... 36
   2.2.2 Methods and Tools for Increasing Energy
          and Resource Efficiency ................................... 39
   2.2.3 Environmental Impacts of Aluminium Die Casting ....... 48

3 **Existing Approaches** ......................................... 65
   3.1 Background for Selection and Evaluation
       of Existing Approaches ....................................... 65
   3.1.1 Procedure and Limitations of Analysis .................. 66
   3.1.2 Definition of Criteria ................................... 68
   3.2 Review on Relevant Research Approaches .................. 73
   3.2.1 Generic Approaches ..................................... 73
   3.2.2 Specific Approaches for Metal Casting .................. 78
   3.3 Comparative Overview ...................................... 83
   3.4 Derivation of Further Research Demand ..................... 87

4 **Multi-level Multi-scale Framework for Enhancing Energy
   and Resource Efficiency in Production** ........................ 91
   4.1 Research Methodology ..................................... 91
   4.2 Requirements and Surrounding Conditions .................. 92
## Multi-level Multi-scale Framework for Enhancing Energy and Resource Efficiency in Aluminium Die Casting

### 5.1 Course of Discussion

### 5.2 Specific Framework for Aluminium Die Casting

- 5.2.1 Actors and System Levels
- 5.2.2 Assignment of Selected Methods and Tools to System Elements
- 5.2.3 Specific Procedure for Aluminium Die Casting Production

### 5.3 Objects of Investigation

- 5.3.1 Actors
- 5.3.2 Products

### 5.4 Definition of System Boundaries

### 5.5 Structural Analysis of Energy and Resource Flows

- 5.5.1 System Elements
- 5.5.2 Considered Energy and Material Flows
- 5.5.3 Synthesis of a Generic Structural Model

### 5.6 Hot Spot Analysis of Energy Demands

- 5.6.1 Foundry 1 (Products 1 and 2)
- 5.6.2 Foundry 2 (Products 3, 4 and 5)
- 5.6.3 Foundry 3 (Product Families 6–12)

### 5.7 Data Acquisition

- 5.7.1 Alloy Supplier
- 5.7.2 Foundry
- 5.7.3 Upstream Process Chains

### 5.8 Modelling, Simulation and Visualisation

- 5.8.1 Input and Output Modelling of System Elements
- 5.8.2 Simulation of the Generic Quantitative Model
- 5.8.3 Visualisation of Energy and Resource Flows

### 5.9 Analysis and Evaluation of the Generic Model

- 5.9.1 Actor Specific Energy Demand Evaluation
- 5.9.2 Environmental Assessment
- 5.9.3 Sensitivity Analyses

### 5.10 Improvement Scenarios

- 5.10.1 Description of Improvement Measures
- 5.10.2 Comparative Evaluation of Improvement Measures
6 Summary and Outlook .................................................. 223
  6.1 Summary ....................................................... 223
  6.2 Concept Evaluation ........................................... 224
  6.3 Outlook ......................................................... 227
