1	Technical Biology and Biomimetics	1
1.1	The Term “Biomimetics”	1
1.2	Historical and Functional Analogies	2
1.3	The Form–Function Problem	3
1.4	Biomimetics and Optimization	3
1.5	From Accidental Discoveries to the Entry into the Market.....	4
1.6	Nature and Technology—Antagonistic?	4
1.7	Classical Definitions of Biomimetics.....	5
1.8	Biomimetic Disciplines	6
1.9	Biomimetics for Architecture and Design: Basic Aspects	7
1.10	Nature and Technology as Continuum	8
2	Buildings, Architecture, and Biomimetics	9
2.1	Technical Biology and Biomimetics of Building and Load-Bearing Structures.....	10
2.1.1	Dome-Forming Node-and-Rod Structures.....	10
2.1.2	Special Forms of Spatial Node-and-Rod Structures	11
2.1.3	Self-supporting Structures (“Tensegrity Structures”)	13
2.1.4	Orthogonal Lattice Structures	14
2.1.5	Panel Structures.....	16
2.1.6	Fold Structures	18
2.1.7	Honeycombs of the Honeybee—Still Somewhat Puzzling.....	20
2.1.8	Do Tensegrity Structures have a Fundamental Cytomechanical Meaning?.....	22
3	Biomimetics for Buildings	25
3.1	Architecture and Biomimetics from the View of Architects, Engineers, and Designers.....	26
3.2	Historical Background and the Origins of Building	28
3.3	Definitions and Methods of Biomimetics for Buildings	29
3.3.1	Definitions from the VDI	29
3.3.2	Methods of Biomimetics	30

- 3.3.3 Biology Push and Technology Pull as Methods of Biomimetics 30
- 3.3.4 Pool Research as Method of the Biomimetic Process for Architects, Civil Engineers, and Industrial Designers 31
- 3.3.5 Evolutionary Light Structure Engineering (ELiSE)..... 32
- 3.3.6 Technical Biology, According to the Definition of VDI 34
- 3.4 Building Biomimetics 34
- 3.5 Classification of Building Biomimetics 34
 - 3.5.1 Similar to Nature: Buildings as Sculptures Similar in Appearance to Nature..... 35
 - 3.5.2 Nature Analog: Building Methods Analogous to Nature 37
 - 3.5.3 Nature-Integrative: Biomimetic Principles as Components of Architecture 38
- 3.6 Potentials of Building Biomimetics 39
 - 3.6.1 Demands of Modern Buildings: Modern Architecture with the Use of Biomimetic Insights..... 39
 - 3.6.2 Potentials of Nature-Integrating Building Techniques..... 43
 - 3.6.3 Evolving Design and Evolutionary Urban Planning..... 48
- 3.7 Methods and Approaches Related to Building Biomimetics 50
 - 3.7.1 Scionic®: Industrial Design and Biomimetics..... 50
 - 3.7.2 Methods of Structure Optimization and Self-Organization ... 51
- 4 Natural Functions and Processes as Prototypes for Buildings..... 53**
 - 4.1 Polar Bears and Alpine Plants: Transparent Insulation Materials 53
 - 4.1.1 Polar Bear Fur as Solar-Driven Heat Pump and Transparent Insulation Material..... 53
 - 4.1.2 Transparent Insulation Materials in Technology 59
 - 4.2 Termite and Ant Structures: Solar Air Conditioning..... 61
 - 4.2.1 Climate Control in Enclosed Termite and Ant Structures 61
 - 4.2.2 Solar Chimneys in Termite Structures and Buildings 64
 - 4.2.3 The Termite Principle for Buildings..... 66
 - 4.3 Mud and Earth: Ancient Materials 68
 - 4.3.1 Clay and Mortar Nests 68
 - 4.3.2 Construction with Adobe..... 69
 - 4.3.3 Earthen Materials and Dwelling in Earthen Structures..... 78
 - 4.4 Building with Reeds and Bamboo: Rediscovered Traditions 81
 - 4.4.1 Ancient Reed Structures..... 81
 - 4.4.2 Bamboo as Modern Building Material..... 81
 - 4.5 Incorporation of Wind Power: Animal Structures and Ancient Building Cultures as Analogies..... 82
 - 4.5.1 Use of the Bernoulli Principle in Animal Structures and Buildings 83
 - 4.5.2 Climate-Suitable Building Methods in Ancient and Modern Cultures..... 92

4.5.3	Usage of the Dynamic Pressure Principle in Animal Structures and Man-made Buildings.....	97
4.5.4	Example for Ventilation and Air Conditioning: Incorporation of Biomimetic Inspirations in the Structural–Architectural Planning Process	102
4.6	Principles of Self-Organization.....	107
4.6.1	Self-Organization in Nature	107
4.6.2	Self-Organization in Urban Planning.....	109
4.7	Solar Effects: Multitude of Possibilities in Nature and Technology	111
4.7.1	The Sun as a Source of Energy	112
4.7.2	Biological Adaptations to Solar Radiation.....	115
4.7.3	Macroscopic, Solar-Driven Energy Systems	116
4.7.4	Butterfly Wing as a Solar Panel	119
4.7.5	Adaptive Solar Usage.....	122
4.8	Photovoltaik: Solar-Contingent Electricity Generation in Nature and Technology	122
4.8.1	Principal Function of Photovoltaic Cells	122
4.8.2	Problems of Photovoltaics on Basis of Silicon	124
4.8.3	Photovoltaic and Thermoelectric Effects of Hornets	124
4.8.4	Organic Photovoltaic Solar Cells.....	126
4.8.5	The Plastic Solar Cell.....	128
5	Biological Support and Envelope Structures and their Counterparts in Buildings.....	131
5.1	Lightweight Structures.....	131
5.1.1	Diatoms → Geodesic Domes.....	132
5.1.2	Radiolaria → Radiolaria-Inspired Structures.....	140
5.1.3	Radiolaria → Radiolaria-Analogous Spatial Structures	141
5.2	Node-and-Rod Frameworks and Hexagonal Structures.....	144
5.2.1	Pith of the Juncus Plant → Unbendable System.....	144
5.2.2	Panel Bracing → Experimental Structures	147
5.2.3	Bee Honeycombs → Hexagonal Systems.....	147
5.3	Rigid Nodes and Tubes	149
5.3.1	Nodes with the Lowest Material Expenditure → Analogous Nodal Structures in Technology.....	150
5.3.2	Tetrahedral Node Networks → Long-Spanning Structural Systems.....	151
5.3.3	Plant Rigidity → Tubes of High Rigidity	151
5.4	Structures on the Principles of Bone.....	154
5.4.1	“Ossified Force Trajectories” → Floor—Column Structures... ..	154
5.4.2	Isostatic Ribs	155
5.4.3	Bone Braces	157
5.5	Shell Structures	158
5.5.1	Mussel Shells → “Isoplex”.....	158

- 5.5.2 Shells Similar to Tridacna → Shell Structures..... 159
- 5.5.3 Sea Urchin Shells → Inspiration for Structure 162
- 5.6 Pneumatics: Buildings..... 163
 - 5.6.1 Biological Pneus → Technological Pneus 164
 - 5.6.2 The Pneu as Key Element of Development 165
 - 5.6.3 The Pneu as Technological Building Block 167
 - 5.6.4 Tensairity: Connecting the Systems of Tensegrity and Pneu.... 167
 - 5.6.5 Water Spider → Diving Bells..... 172
- 5.7 “Tree Columns” and Tent Structures..... 173
 - 5.7.1 Principles of Tree Structure → Tree Columns 173
 - 5.7.2 Spider Webs → Tent Roofs 173
 - 5.7.3 The Variety of Tent Structures..... 175
- 5.8 Moving Structures..... 176
 - 5.8.1 Non-Autonomous Movements..... 176
 - 5.8.2 Autonomous Movements 177
 - 5.8.3 Responsive Movements 177
- 6 Products and Architecture: Examples of Biomimetics for Buildings..... 179**
 - 6.1 Biomimetics on the Basis of Algae, a Biological Example 180
 - 6.2 Pool Research as Biomimetic Method in Application 182
 - 6.3 Pool Research: Abstraction Through the Classification of Biological Precedents..... 183
 - 6.3.1 Classification of Diatom Species 183
 - 6.4 Pool Research: Analysis and Evaluation..... 184
 - 6.5 Pool Research: Abstraction of Geometric Principles 186
 - 6.6 Pool Research: Translation into CAD Models..... 187
 - 6.6.1 Structuring of a Free-Form Surface Analogous to the Centrales..... 187
 - 6.6.2 Structuring of Free-Form Surface Analogous to the Diatom Species Craspedodiscus 188
 - 6.6.3 Segmented, Radially Symmetric, Double-Contorted Free-Form Surface 188
 - 6.6.4 Structuring of a Free-Form Surface Analogous to the Pennales (Araphidineae) 188
 - 6.6.5 Evaluation 188
 - 6.7 From Pool Research to Applied Research..... 192
 - 6.8 Generative Design..... 193
 - 6.9 Physical Models 197
 - 6.10 Biomimetic Potentials: Ribs and Frames 200
 - 6.11 Biomimetic Potentials: Rectangular Frames 201
 - 6.12 Biomimetic Potentials: Layered structures 202
 - 6.13 Biomimetic Potential: Offset Beams..... 203
 - 6.14 Biomimetic Potentials: Incisions and Curvature..... 204
 - 6.15 Biomimetic Potentials: Curvature 205
 - 6.16 Biomimetic Potentials: Hierarchical Structures 206

- 6.17 Biomimetic Potentials: Fold Systems 207
- 6.18 Translation and Technological Implementation in the
Example of the BOWOOSS Research Pavilion 208
 - 6.18.1 The Research Project BOWOOSS as Example for
Research and Development 208
 - 6.18.2 Process Method of the Biomimetics Research
Project BOWOOSS 211
- 6.19 BOWOOSS Research Pavilion: Methods and Results of
Building Biomimetics 214
- 6.20 Building Biomimetics in Examples: Biomimetic and
Analogous Developments 221
- 6.21 Structural Optimization 222
- 6.22 Self-Organization 224
- 6.23 Evolutionary Design 226
- 6.24 Morphogenetic Design 228
- 6.25 Geometric Optimizations: Sectional Optimization 230
- 6.26 Hierarchical Structures 232
- 6.27 Evolutionary Urban Planning 234
- 6.28 Exterior Surface Effects 236
- 6.29 Fundamentals of Resource-Efficient Facade Technologies 238
- 6.30 Daylight Usage 240
- 6.31 Shading 242
- 6.32 Shading and Solar Energy Production 244
- 6.33 Shading and Light Utilization 1 246
- 6.34 Shading and Directing Light 2 248
- 6.35 Color without Pigments 1 250
- 6.36 Color without Pigments 2 252
- 6.37 Complex Climate Systems 1: New Buildings 254
- 6.38 Complex Climate System 2: Building Reuse 256
- 6.39 Spatial Panels 258
- 6.40 Spines 260
- 6.41 Spatial Structures of Curved Modules 1 262
- 6.42 Spatial Structures from Curved Modules 2 264
- 6.43 Layered Tissues 266
- 6.44 Pneu 268
- 6.45 Solid, Efficient Load-Bearing and Heat-Insulated
Lightweight Structures 270
- 6.46 Sonar 272
- 6.47 Fiber Composite Sensors 274
- 6.48 Reactive Envelope Structures 276
- 6.49 Ventilation Systems for Breathing Envelopes 278
- 6.50 Thermoregulating Envelope Structures 280
- 6.51 Modifiable Surface Elements 1 282
- 6.52 Modifiable Surface Elements 2 284
- 6.53 Multiaxially Modifiable Surface Elements 286

- 6.54 Reactive Contraction Systems..... 288
- 6.55 Self-responsive Movements, Fin Ray Effect®..... 290
- 6.56 Flexible Shells..... 292
- 6.57 Self-healing 294
- 6.58 Bambootanics..... 296
- 6.59 Floating Volumes..... 298
- 6.60 Sources, Figure Index, Authors and Project Contributors
in Chap. 6 300
 - 6.60.1 Biomimetics on the Basis of Algae, a Biological
Example..... 300
 - 6.60.2 Pool Research as Biomimetic Method in Application 300
 - 6.60.3 Pool Research: Abstraction through the
Classification of Biological Precedents 300
 - 6.60.4 Pool Research: Analysis and Evaluation..... 300
 - 6.60.5 Pool Research: Abstraction of Geometric Principles 300
 - 6.60.6 Pool Research: Translation into CAD Models..... 300
 - 6.60.7 From Pool Research to Applied Research..... 301
 - 6.60.8 Generative Design..... 301
 - 6.60.9 Physical Models 301
 - 6.60.10 Biomimetic Potentials: Ribs and Frameworks..... 301
 - 6.60.11 Biomimetic Potentials: Rectangular Frames..... 301
 - 6.60.12 Biomimetic Potentials: Layered Structure 301
 - 6.60.13 Biomimetic Potential: Offset Beams..... 301
 - 6.60.14 Biomimetic Potentials: Incisions and Curvature..... 302
 - 6.60.15 Biomimetic Potentials: Curvature..... 302
 - 6.60.16 Biomimetic Potentials: Hierarchical Structures..... 302
 - 6.60.17 Biomimetic Potentials: Fold Systems 302
 - 6.60.18 Translation and Technological Implementation
using the example of the BOWOOSS Research Pavilion.... 302
 - 6.60.19 BOWOOSS Research Pavilion: Methods and
Results of Building-Biomimetics..... 303
 - 6.60.20 Building Biomimetics in Examples: Biomimetics
and Analogous Developments..... 303
 - 6.60.21 Structural Optimization..... 303
 - 6.60.22 Self-organization 303
 - 6.60.23 Evolutionary Design..... 303
 - 6.60.24 Morphogenetic Design..... 303
 - 6.60.25 Geometric Optimizations: Sectional Optimization 304
 - 6.60.26 Hierarchical Structures..... 304
 - 6.60.27 Evolutionary Urban Planning..... 304
 - 6.60.28 Exterior Surface Effects 305
 - 6.60.29 Foundations of Resource-Efficient Facade Technologies.... 305
 - 6.60.30 Daylight Usage..... 305
 - 6.60.31 Shading..... 305
 - 6.60.32 Shading and Solar Energy Production 306

6.60.33	Shading and Directing Light 1	306
6.60.34	Shading and Directing Light 2	306
6.60.35	Color without Pigments 2.....	306
6.60.36	Complex Climate Systems 1: New Construction.....	307
6.60.37	Complex Climate Systems 2: Building Reuse	307
6.60.38	Spatial Panels	307
6.60.39	Spines	307
6.60.40	Spatial Structures with Curved Modules 1.....	307
6.60.41	Spatial Structures with Curved Modules 2.....	308
6.60.42	Layered Tissues.....	308
6.60.43	Expandable Structures.....	308
6.60.44	Solid, Efficient, Load-bearing and Heat-Insulated Lightweight Structures	308
6.60.45	Sonar	308
6.60.46	Fiber Composite Sensors.....	309
6.60.47	Reactive Envelope Structures	309
6.60.48	Ventilation Systems for Breathing Envelopes.....	309
6.60.49	Thermoregulating Envelope Structures.....	309
6.60.50	Modifiable Surface Elements 1	310
6.60.51	Modifiable Surface Elements 2.....	310
6.60.52	Multiaxially Modifiable Surface Elements	311
6.60.53	Reactive Construction Systems.....	311
6.60.54	Self-responsive Movements, Fin Ray Effect®	311
6.60.55	Relocating Shells.....	311
6.60.56	Self-healing	311
6.60.57	Bambootanic	312
6.60.58	Floating Volumes.....	312
7	Brief Information to Biological Structures.....	313
7.1	Biological Building Materials (Outline)	313
7.2	Beaver Structures	314
7.3	Beaver Dams	314
7.4	Badger Structures	314
7.5	Tunnel Systems of Steppe Marmots.....	314
7.6	Scrubfowl Mounds	315
7.7	Storage Chambers of Moles	315
7.8	Storage Chambers of Hamsters	315
7.9	Spherical Structures of the Ovenbird	315
7.10	Mortar Structures of the Potter Wasp	315
7.11	Weaver Bird Nests.....	315
7.12	Tallest Ant Mounds	316
7.13	Stockpiles of the Harvester Ant.....	316
7.14	Structures of Compass Termites.....	316
7.15	Elongated Termite Structures	316
7.16	Earth Mounds of Less Organized Termites.....	316

7.17 Largest Termite Structures 316

7.18 Nest of the Goldcrest..... 317

7.19 Tree Frog Nests 317

7.20 Foam Nest of the Green Flying Frog 317

7.21 Egg Raft of the Purple Snail..... 317

7.22 Honeycombs of the Honeybee 318

7.23 Precise Constructions of the Honeybee..... 318

7.24 Temperature Differential in Bee Colonies..... 318

7.25 Spider Webs..... 318

7.26 Thickness of Spider Silk 318

7.27 Egg Containers of the Sac Spider..... 319

7.28 Silkworm Cocoons 319

7.29 Nest Structures of the Swift 319

7.30 Dung Balls of the Scarab Beetle 319

7.31 Coral Reefs..... 319

7.32 Sand Coral Reefs..... 319

7.33 Fishing Nets 320

7.34 Storage Hideaways..... 320

7.35 Path Constructions 320

7.36 Bowers of the Bowerbird 320

7.37 Regulating Humidity..... 320

7.38 Gas Exchange..... 321

7.39 Vertebrate Temperature Regulation..... 321

7.40 Temperature Regulation by Insects..... 321

7.41 Sizes of Populations of Colony-Forming Insects..... 322

7.42 Leaf Surfaces of Plants..... 322

7.43 Maximum Heights of Trees..... 322

7.44 Maximum Trunk Diameters of Trees 322

7.45 Slenderness of Plants..... 322

7.46 Specific Masses of Wood 323

7.47 Elasticity Moduli of Biological Building Materials..... 323

7.48 Elastic Efficiencies of Biological Stretching Elements..... 323

7.49 Tensile Strength of Biological Building Materials..... 323

7.50 Root Depths of Plants..... 323

Additional Literature..... 325

Index..... 331
