

Contents

1	Genetic Theory for Cubic Graphs	1
1.1	Introduction	1
1.2	Preliminaries	3
1.3	Motivation	5
1.4	Breeding and Parthenogenic Operations	8
1.4.1	Breeding Operations	9
1.4.2	Parthenogenic Operations	11
1.4.3	Inverse Breeding and Inverse Parthenogenic Operations	14
1.5	Results	16
1.6	Conclusions	24
	References	26
2	Inherited Properties of Descendants	27
2.1	Introduction	27
2.2	Hamiltonicity	28
2.2.1	Non-mutant Non-Hamiltonian Descendants	28
2.2.2	Main Theorem and Discussion	34
2.3	Bicubic Graphs	37
2.3.1	Type 1 Breeding	38
2.3.2	Type 2 Breeding	39
2.3.3	Type 2 Parthenogenesis	40
2.3.4	Type 3 Breeding	42
2.3.5	Main Theorem and Discussion	43
2.4	Planarity	46
2.4.1	Type 1 Breeding	47
2.4.2	Type 2 Breeding	49
2.4.3	Type 3 Breeding	50
2.4.4	Type 1 Parthenogenesis	52
2.4.5	Type 2 Parthenogenesis	53
2.4.6	Type 3 Parthenogenesis	54
2.4.7	Main Theorem and Discussion	55

2.5	Summary and Conclusions	57
	References	58
3	Uniqueness of Ancestor Genes	61
3.1	Introduction	61
3.2	Proof of the Main Result	63
3.2.1	Ancestors of Graphs with Parthenogenic Objects	64
3.2.2	Complete Family of Ancestors of Size Three	68
3.2.3	Sequence of Inverse Breeding Operations	74
3.2.4	Existence of Exposed Genes	83
3.2.5	Uniqueness of the Complete Family of Ancestor Genes	88
A	Completed Proofs from Chapter 3	93
A.1	Full Proof of Theorem 3.2	93
A.2	Full Proof of Proposition 3.4	101
Index	117
