Contents

Part I Analog and Mixed-Signal Applications

1 I-Flows: A Novel Approach to Computational Intelligence for Analog Circuit Design Automation Through Symbolic Data Mining and Knowledge-Intensive Reasoning ............... 3
   Fanshu Jiao, Sergio Montano, Cristian Ferent and Alex Doboli

2 Automatic Synthesis of Analog Integrated Circuits Including Efficient Yield Optimization ..................... 29
   Lucas C. Severo, Fabio N. Kepler and Alessandro G. Girardi

3 Application of Computational Intelligence Techniques to Maximize Unpredictability in Multiscroll Chaotic Oscillators .......................................................... 59
   Victor Hugo Carbajal-Gómez, Esteban Tlelo-Cuautle and Francisco V. Fernández

4 Optimization and Co-simulation of an Implantable Telemetry System by Linking System Models to Nonlinear Circuits ................................................................. 83
   Yao Li, Hao Zou, Yasser Moursy, Ramy Iskander, Robert Sobot and Marie-Minerve Louerat

5 Framework for Formally Verifying Analog and Mixed-Signal Designs ........................................... 115
   Mohamed H. Zaki, Osman Hasan, Sofiène Tahar and Ghiath Al-Sammane
6 Automatic Layout Optimizations for Integrated MOSFET Power Stages ........................................... 147
David Guilherme, Jorge Guilherme and Nuno Horta

7 Optimizing Model Precision in High Temperatures for Efficient Analog and Mixed-Signal Circuit Design Using Modern Behavioral Modeling Technique: An Industrial Case Study .......................... 177
Sahbi Baccar, Timothée Levi, Dominique Dallet and François Barbara

8 Nonlinearities Behavioral Modeling and Analysis of Pipelined ADC Building Blocks .......................... 217
Carlos Silva, Philippe Ayzac, Nuno Horta and Jorge Guilherme

Part II Radio-Frequency Design

9 SMAS: A Generalized and Efficient Framework for Computationally Expensive Electronic Design Optimization Problems ........................................ 251
Bo Liu, Francisco V. Fernández, Georges Gielen, Ammar Karkar, Alex Yakovlev and Vic Grout

10 Computational Intelligence Techniques for Determining Optimal Performance Trade-Offs for RF Inductors ............... 277
Elisenda Roca, Rafael Castro-López, Francisco V. Fernández, Reinier González-Echevarría, Javier Sieiro, Neus Vidal and José M. López-Villegas

11 RF IC Performance Optimization by Synthesizing Optimum Inductors ........................................ 297
Mladen Božanić and Saurabh Sinha

12 Optimization of RF On-Chip Inductors Using Genetic Algorithms ........................................... 331
Eman Omar Farhat, Kristian Zarb Adami, Owen Casha and John Abela

13 Automated System-Level Design for Reliability: RF Front-End Application .................................. 363
Pietro Maris Ferreira, Jack Ou, Christophe Gaquière and Philippe Benabes
14 The Backtracking Search for the Optimal Design of Low-Noise Amplifiers
Amel Garbaya, Mouna Kotti, Mourad Fakhfakh and Patrick Siarry

391

15 Design of Telecommunication Receivers Using Computational Intelligence Techniques
Laura-Nicoleta Ivanciu and Gabriel Oltean

413

16 Enhancing Automation in RF Design Using Hardware Abstraction
Sabeur Lafi, Ammar Kouki and Jean Belzile

439

17 Optimization Methodology Based on IC Parameter for the Design of Radio-Frequency Circuits in CMOS Technology
Abdellah Idrissi Ouali, Ahmed El Oualkadi, Mohamed Moussaoui and Yassin Laaziz

471
