Contents

1 Introduction ........................................................................... 1
   1.1 Cartesian Coordinate ...................................................... 3
      1.1.1 Waves in a Mid-latitude Channel ................................. 3
      1.1.2 Waves on the Equatorial $\beta$-Plane ............................ 7
   1.2 The Eigenvalue Equation for Waves on a Rotating Sphere ...... 9
   1.3 Invariant Theory and Its Application to a Sphere
      and a Spheroid .................................................................. 10
   1.4 A Unified Approach to Wave Theory of the Shallow
      Water Equations ................................................................. 11
   References ............................................................................. 12

2 Waves in a Channel on the Mid-latitude $\beta$-Plane ................. 13
   2.1 Kelvin Waves .................................................................. 15
   2.2 Inertia-Gravity and Planetary Waves ................................. 15
   2.3 Inertial Waves .................................................................. 19
   2.4 Analytic Solutions of the Eigenvalue Problem
      and Eigenfunctions ............................................................... 20
   References ............................................................................. 27

3 Waves in a Channel on the Equatorial $\beta$-Plane .................... 29
   References ............................................................................. 34

4 Planetary and Inertia-Gravity Waves in an Equatorial
   Channel on a Sphere ............................................................... 35
   4.1 Introduction ..................................................................... 35
   Reference ............................................................................... 45

5 Planetary and Inertia-Gravity Waves in a Mid-latitude
   Channel on a Sphere ............................................................... 47
   Reference ............................................................................... 53
6  Planetary and Inertia-Gravity Waves on the Rotating Spherical Earth ...................................................... 55
   6.1  Baroclinic (i.e., “Thin”) Ocean  .................................. 57
   6.2  Barotropic (i.e., “Deep”) Ocean  .............................. 60
       6.2.1 Dispersion Relation of Planetary Waves ............... 64
       6.2.2 Dispersion Relation of Inertia-Gravity Waves ....... 66
            6.2.3 Eigenfunctions  ...................................... 67
   References .................................................................. 68

7  Kelvin Waves on the Rotating Spherical Earth ..................... 69
   Reference .................................................................. 76

Index ............................................................................. 77
Shallow Water Waves on the Rotating Earth
Paldor, N.
2015, VIII, 77 p. 32 illus., 19 illus. in color., Softcover
ISBN: 978-3-319-20260-0
