

Contents

1	From Complex to Spatial Networks	1
1.1	Early Days	1
1.2	Complex Networks	2
1.3	Space Matters	3
1.4	Definition and Representations	3
1.4.1	Spatial Networks	3
1.4.2	Representations of Networks	4
1.5	Planar Graphs	6
1.5.1	Planarity and Crossing Number	8
1.5.2	Basic Results	10
2	Irrelevant and Simple Measures	13
2.1	Irrelevant Measures	13
2.1.1	Degree	14
2.1.2	Length of Segments	16
2.1.3	Clustering, Assortativity, and Average Shortest Path	17
2.1.4	Empirical Illustrations	21
2.2	Simple Measures	28
2.2.1	Topological Indices: α and γ Indices	28
2.2.2	Organic Ratio and Ringness	29
2.2.3	Cell Areas and Shape	30
2.2.4	Route Factor, Detour Index	31
2.2.5	Cost, Efficiency, and Robustness	32
3	Statistics of Faces and Typology of Planar Graphs	35
3.1	Area and Shape of Faces	35
3.1.1	Characterizing Blocks	36
3.1.2	A Typology of Planar Graphs	39
3.2	Approximate Mapping of a Planar Graph to a Tree	42
3.3	An Exact Bijection Between a Planar Graph and a Tree	48

4	Betweenness Centrality	51
4.1	Definition of the BC	51
4.2	General Properties	52
4.2.1	Numerical Calculation: Brandes' Algorithm	52
4.2.2	The Average BC	53
4.2.3	Edge Versus Node BC	54
4.2.4	Adding Edges	55
4.2.5	Scaling of the Maximum BC	57
4.3	The Spatial Distribution of Betweenness Centrality	59
4.3.1	Regular Lattice and Scale-Free Networks	59
4.3.2	Giant Percolation Cluster	60
4.3.3	Real-World Planar Graphs	61
4.3.4	Summary: Stylized Facts	66
4.4	The BC of a Loop Versus the Center: A Toy Model	67
4.4.1	Approximate Formulas	68
4.4.2	A Transition to a Central Loop	69
4.5	The BC in a Disk: The Continuous Limit	71
5	Simplicity and Entropy	75
5.1	Simplicity	75
5.1.1	Simplest Paths	75
5.1.2	The Simplicity Index and the Simplicity Profile	77
5.1.3	A Null Model	79
5.1.4	Measures on Real-World Networks	81
5.2	Information Perspective	84
5.2.1	Entropy and Simplest Paths	84
5.2.2	Navigating in the City	86
5.2.3	Quantifying the Complexity	87
6	Spatial Dominance and Community Detection	93
6.1	Spatial Dominance	93
6.2	Community Detection in Spatial Networks	97
6.2.1	Modularity	99
6.2.2	A Null Model for Spatial Networks with Attributes	100
6.2.3	Synthetic Spatial Network Benchmarks	105
6.2.4	Modifying the Modularity	105
7	Measuring the Time Evolution of Spatial Networks	111
7.1	Road Networks	112
7.1.1	Organic Growth	112
7.1.2	Effect of Planning	120
7.1.3	Simplicity Measures	130
7.2	Subways	132
7.2.1	Generalities	133
7.2.2	Network Evolution	136

7.2.3	Standard Measures	138
7.2.4	Efficiency	139
7.2.5	Temporal Statistics: Bursts	141
7.2.6	Core and Branches: Measures and Model	143
7.2.7	Spatial Organization of the Core and Branches	152
8	Tessellations of the Plane	157
8.1	The Voronoi Tessellation	157
8.1.1	The Delaunay Graph	159
8.1.2	Average Properties of the Poisson-Voronoi Tessellation	160
8.1.3	Cell Area Probability Distribution	162
8.1.4	Probability Distribution of the Number of Sides and the Perimeter	164
8.1.5	Central Limit Theorems	166
8.2	Effect of the Density of Points	167
8.3	Crack and STIT Tessellations	169
8.4	Planar Fragmentation	171
8.5	A Null Model for Spatial Multilayer Networks	173
9	Random Geometric Graphs	177
9.1	The Hard Case	178
9.1.1	Degree Distribution	178
9.1.2	The Clustering Coefficient	179
9.1.3	Calculation of the Giant Component	181
9.2	Soft Random Geometric Graphs	183
9.2.1	The Full Connectivity Probability	183
9.3	Bluetooth and Gabriel Graphs	186
9.3.1	Bluetooth Graph	186
9.3.2	Gabriel Graph	186
9.4	The k -nearest Neighbor Model	188
9.4.1	Definition and Connectivity Properties	188
9.4.2	A Scale-Free Network on a Lattice	189
9.5	A Dynamical Model	191
9.5.1	Definition	191
9.5.2	Stationary State	192
9.5.3	Percolation Properties	192
9.5.4	Degree Distribution	193
9.6	Other Variants	194
9.6.1	Random Geometric Graphs in Hyperbolic Space	194
9.6.2	Apollonian Networks	195
10	Spatial Generalizations of Random Graphs	197
10.1	Spatial Version of Erdos–Renyi Graphs	197
10.1.1	The Erdos–Renyi Graph	197

10.1.2	Random Planar Graphs	198
10.2	The Hidden Variable Model for Spatial Networks	200
10.2.1	Spatial Case	200
10.2.2	Effect of Traffic	201
10.2.3	The Waxman Model	203
10.3	Spatial Small Worlds	206
10.3.1	The Watts–Strogatz Model	206
10.3.2	Spatial Generalizations in Dimension d	207
10.3.3	Percolation in Small Worlds	210
10.3.4	Navigability in the Kleinberg Model	213
10.3.5	Searching in Spatial Scale-Free Networks	218
11	Loops and Branches	221
11.1	Reducing the Complexity of a Spatial Network	221
11.2	A Loop and Branches Toy Model	224
11.2.1	Exact and Approximate Formulas	225
11.2.2	Threshold Value of w and Optimal ℓ	229
11.3	Analyzing the Impact of Congestion Cost	233
11.3.1	An Exactly Solvable Hub-and-Spoke Model	235
11.3.2	Congestion and Centralized Organization	238
12	Optimal Networks	241
12.1	Optimization, Complexity, and Efficiency	241
12.1.1	Complexity	241
12.1.2	Efficiency of Transport Network	242
12.2	Minimum Spanning Tree	244
12.2.1	Minimum Spanning Tree on a Complete Graph	245
12.2.2	Euclidean Minimum Spanning Tree	247
12.3	Optimal Trees: Generalization	253
12.4	Beyond Optimal Trees: Noise and Loops	258
12.5	Hub-and-Spoke Structure	261
13	Models of Network Growth	265
13.1	Preferential Attachment and Space	265
13.1.1	Preferential Attachment and Distance Selection	267
13.2	Attraction Potential Models	274
13.2.1	The Connection Rule	275
13.2.2	Uniform Distribution of Nodes	276
13.2.3	Exponential Distribution of Centers	277
13.2.4	Effect of Centrality and Density	279
13.2.5	The Appearance of Core Districts	285
14	Greedy Models	287
14.1	A Model for Distribution Networks	288
14.2	Cost-Benefit Analysis	290

- 14.2.1 Theoretical Formulation 291
- 14.2.2 Crossover Between the Star Graph and the MST 292
- 14.2.3 Spatial Hierarchy and Scaling 295
- 14.2.4 Understanding the Scaling with a Toy Model. 299
- 14.2.5 Efficiency 300
- 14.2.6 The Model and Real-World Railways 304
- 14.3 Cost-Benefit Analysis: General Scaling Theory 304
 - 14.3.1 Theoretical Framework 305
 - 14.3.2 Subways 306
 - 14.3.3 Railways 310
- 15 Discussion and Future Directions 315**
- References 319**
- Index 329**
