Part I Dispersion Relations in HD Quantum Wells, Nano Wires and Dots in the Presence of Magnetic Field

1 The DRs in Low Dimensional HD Systems in the Presence of Magnetic Field ........................................... 3
  1.1 Introduction ........................................................................................................................................... 3
  1.2 Theoretical Background ....................................................................................................................... 6
    1.2.1 The DR in Quantum Wells of HD III–V, Ternary and Quaternary Materials in the Presence of Magnetic Field ........................................................................................................... 6
    1.2.2 The DR in Nano Wires of HD III–V Semiconductors in the Presence of Magnetic Field .......... 19
    1.2.3 The DR in Quantum Dot of HD III–V Semiconductors in the Presence of Magnetic Field .... 25
    1.2.4 The DR in Quantum Wells of HD III–V Semiconductors in the Presence of Cross Fields ....... 31
    1.2.5 The DR in Nano-Wires of HD III–V Semiconductors in the Presence of Cross Fields ........ 34
    1.2.6 The DR in Quantum Dot of HD III–V Semiconductors in the Presence of Cross Fields ....... 35
    1.2.7 The DR in Quantum Wells of HD IV–VI Semiconductors in the Presence of Magnetic Field .. 37
    1.2.8 The DR in Nano Wires of HD IV–VI Semiconductors in the Presence of Magnetic Field ....... 51
    1.2.9 The DR in Quantum Dot of HD IV–VI Semiconductors in the Presence of Magnetic Field ..... 60
### Part II Dispersion Relations in HD Quantum Confined Non-parabolic Materials

#### 2 The DRs in Ultrathin Films (UFs) of Heavily Doped (HD) Non-parabolic Materials

Part V Dispersion Relations in HD Kane Type Semiconductors in the Presence of Intense Electric Field

19 The DR Under Intense Electric Field in HD Kane Type Semiconductors ........................................... 547
  19.1 Introduction ................................................................. 547
  19.2 Theoretical Background ............................................... 548
    19.2.1 The Formulation of the Electron Dispersion Law in the Presence of Intense Electric Field in HD III–V, Ternary and Quaternary Semiconductors ........................................ 548
    19.2.2 The DR Under Magnetic Quantization in HD Kane Type Semiconductors in the Presence of Intense Electric Field .................................................. 558
    19.2.3 The DR in QWs in HD Kane Type Semiconductors in the Presence of Intense Electric Field ............ 559
    19.2.4 The DR in NWs in HD Kane Type Semiconductors in the Presence of Intense Electric Field ........ 560
    19.2.5 The DR in QDs in HD Kane Type Semiconductors in the Presence of Intense Electric Field ........ 561
    19.2.6 The Magneto DR in QWs of HD Kane Type Semiconductors in the Presence of Intense Electric Field ......... 561
    19.2.7 The DR in Accumulation and Inversion Layers of Kane Type Semiconductors in the Presence of Intense Electric Field ........................................... 561
    19.2.8 The Magneto DR in Accumulation and Inversion Layers of Kane Type Semiconductors in the Presence of Intense Electric Field ........................................... 563
    19.2.9 The DR in Doping Superlattices of HD Kane Type Semiconductors in the Presence of Intense Electric Field .................................................. 564
    19.2.10 The Magneto DR in Inversion Layers of Kane Type Semiconductors in the Presence of Intense Electric Field .................................................. 565
    19.2.11 The DR in QWHD Effective Mass Superlattices of Kane Type Semiconductors in the Presence of Intense Electric Field .................................................. 566
    19.2.12 The DR in NWHD Effective Mass Superlattices of Kane Type Semiconductors in the Presence of Intense Electric Field .................................................. 567
    19.2.13 The DR in Quantum Dot HD Superlattices of Kane Type Semiconductors in the Presence of Intense Electric Field .................................................. 568
20.2.19 Fowler-Nordheim Field Emission .................. 602
20.2.20 Optical Effective Mass ................................. 602
20.2.21 Einstein’s Photoemission ............................... 603
20.2.22 Righi-Leduc Coefficient ............................... 603
20.2.23 Electric Susceptibility ................................. 604
20.2.24 Electric Susceptibility Mass ......................... 604
20.2.25 Electron Diffusion Thermo-Power .................. 605
20.2.26 Hydrostatic Piezo-resistance Coefficient .......... 605
20.2.27 Relaxation Time for Acoustic Mode Scattering . 605
20.2.28 Gate Capacitance ........................................ 606
20.3 Open Research Problems ................................. 606
References .................................................. 607

21 Conclusion and Scope for Future Research .............. 615
References .................................................. 618
