

Contents

1	Toy Model	1
2	Ising Model for Ferromagnetism	7
2.1	Model	7
2.2	Non-interacting Spins	9
2.2.1	Standard Solution	9
2.2.2	Solution in Terms of Energy and Entropy	11
2.3	Interacting Spins	14
2.3.1	Mean-Field Theory in Terms of Energy and Entropy	14
2.3.2	Mean-Field Theory in Terms of Average Field	23
3	Gases and Liquids	25
3.1	Ideal Gas at Fixed Volume	25
3.2	Ideal Gas at Fixed Pressure	29
3.3	Ideal Gas Under Gravity	32
3.4	Gas with Interactions: van der Waals Theory	34
3.5	Gas–Liquid Transition at Fixed Pressure	37
3.6	Behavior Near Critical Point	41
3.7	Gas–Liquid Transition at Fixed Volume	44
4	Landau Theory	51
4.1	Ising Ferromagnetism	52
4.2	Gas-Liquid Transition	57
4.3	General Order Parameters	60
4.4	Beyond Mean Field: Universality Classes	62
5	First Mathematical Interlude: Variational Calculus	63
5.1	Example: Bobsled Race	64
5.2	Minimization	66
5.3	Example: Guitar String	71

6	Field Theory for Nonuniform Systems	73
6.1	What is a Field?	73
6.2	Nonuniform System in a Disordered Phase	76
6.3	Interface Between Ordered Phases	79
7	Dynamics of Phase Transitions	83
7.1	Nucleation and Growth	83
7.2	Heterogeneous Nucleation	88
8	Solids: Crystals and Glasses	91
8.1	What is a Solid?	91
8.2	Crystals	92
8.3	Close-Packed Crystals, Crystallization of Hard Spheres	98
8.4	Elasticity and Viscosity	101
8.5	Microscopic Interpretation of Viscosity	106
8.6	Glass Transition	108
9	Second Mathematical Interlude: Tensors	111
9.1	What is a Tensor?	111
9.2	Working with Tensors	114
9.3	Standard Vector and Matrix Expressions	117
9.4	Transformation Under Rotation	121
9.5	Transformation Under Inversion	124
9.5.1	Right-Hand Rule Versus Left-Hand Rule	125
9.5.2	Inversion of Coordinates	126
9.5.3	Reflection of Coordinates	126
9.6	Magnitudes, Directions, and Visualization	127
10	Liquid Crystals	131
10.1	Order and Symmetry	131
10.2	Nematic Order Parameter	134
10.3	Landau-de Gennes Theory	140
10.4	Maier-Saupe Theory	147
10.5	Onsager Theory	155
10.6	Elasticity of Nematic Order	157
10.7	Frederiks Transition	162
10.8	Defects in Nematic Phase	168
10.9	Chirality and Cholesteric Liquid Crystals	176
10.10	Other Liquid-Crystal Phases	180
	Index	183

Introduction to the Theory of Soft Matter

From Ideal Gases to Liquid Crystals

Selinger, J.

2016, X, 185 p., Hardcover

ISBN: 978-3-319-21053-7
