Contents

1  Introduction .............................................. 1
  1.1  Researching the Karst Surface and New Caves in the Course of
       Construction ........................................... 3
  1.2  Research Led to New Insights About Karst Development ........ 6
  1.3  Road Planning ........................................... 11
  1.4  Cave Preservation ....................................... 12
  1.5  Karst Protection in Light of Motorway Construction
       and Usage ............................................. 15
  1.6  Conclusion ................................................ 16

Part I  Classical Karst: Construction Monitoring

2  Development and Karstification of the Karst Aquifer
   as Discovered Between Klanec and Črni Kal .................. 19
  2.1  Karst Surface and Karstification .......................... 19
       2.1.1  Alveolinid-Nummulitid Limestones ................. 19
       2.1.2  Flysch ............................................ 20
       2.1.3  Karstification of the Alveolinid-Nummulitid
               Limestone ....................................... 22
  2.2  Epikarst ................................................ 22
  2.3  Discovered Caves ....................................... 22
  2.4  Aquifer Development .................................... 25
  2.5  Cave Preservation ...................................... 27
  2.6  Conclusion .............................................. 28

3  Unroofed Caves Near Kozina and Their Identification .......... 31
  3.1  Unroofed Caves and the Karst Surface ........................ 32
  3.2  Conclusion .............................................. 37

4  The Section Between Divača and Kozina Revealed Many
   Characteristics of Karst Development ........................ 39
  4.1  Karst Surface ........................................... 39
  4.2  Newly Discovered Caves ................................ 40
  4.3  Motorway Construction and Karst Features ................... 44
  4.4  Conclusion .............................................. 45
5  Great Cavernosity Between Dane and Fernetiči Points to Diverse Karst Formation ........................................ 47
   5.1  Caves .................................................. 47
   5.2  Road Construction .................................... 50
   5.3  Conclusion ............................................ 51

6  Unroofed Caves Discovered on the Route Between Čebulovica and Dane .................................................. 53
   6.1  Karst Near Divača ..................................... 53
   6.2  Dolines .................................................. 54
   6.3  Caves .................................................... 57
       6.3.1  Cavernosity of Different Rock Types ............ 57
       6.3.2  Old Caves ......................................... 58
       6.3.3  Shafts ............................................. 59
       6.3.4  Road Construction and Caves .................... 59
   6.4  Conclusion ............................................ 64

Part II  Classical Karst: Newly Discovered Significant Karst Features

7  Unroofed Caves Provide Important Clues to the Karst Development .................................................. 69
   7.1  Identifying Unroofed Caves on the Karst Surface ...... 69
       7.1.1  Types of Unroofed Caves .......................... 73
       7.1.2  Patches of Karst Terrain Which Are Covered by Unique Soil and Vegetation .................. 73
       7.1.3  Flowstone and Cave Alluvium on the Karst Surface ........................................ 74
       7.1.4  Doline-like Shapes and Strings of Dolines ...... 74
       7.1.5  Notches ............................................. 75
       7.1.6  Variegated Shapes of Cave Systems ............. 75
   7.2  Conclusion ............................................ 75

8  The Large Unroofed Cave Near Povir ........................................ 77
   8.1  Speleological Characteristics of the Brezstropa Jama Unroofed Cave ........................................ 77
       8.1.1  Discovery and Exploration of the Cave .......... 77
       8.1.2  Shape of the Excavated Cave ..................... 77
       8.1.3  Rock Relief on the Passage Walls ................ 78
       8.1.4  Forms Created Due to the Filling of the Passage with Sediments and Soil ...................... 81
       8.1.5  Cave Sediments .................................... 81
   8.2  Comparison of Sediments from Different Caves Along the Motorway Route ........................................ 84
   8.3  The Brezstropa Jama Unroofed Cave in Time and Space .................................................. 85
9 Origin and Mineral Composition of Clastic Sediments on the Karst Surface Around Divača

9.1 Sites and Description of Clastic Sediments in Karst Depressions Around Divača

9.1.1 The Brezstropa Jama Unroofed Cave Near Povir

9.1.2 Sediments from Two Filled-in Caves South of Povir

9.1.3 Filled-in Cave from the Divaški Hrib Hill

9.1.4 The Unroofed Cave at Grintavca

9.1.5 Sediments from the Unroofed Cave in Bojni Dol

9.2 Conclusion

10 Composition of Sediments in Dolines

10.1 Sediments from Dolines

10.1.1 Doline No. V1

10.1.2 Doline No. V2

10.1.3 Doline No. V3

10.1.4 Doline No. V4

10.1.5 Infilled Cave with Stalactites and Stalagmites

10.1.6 Doline No. V5

10.1.7 Doline No. V6

10.2 Conclusion

11 Cave Sediments from the Infilled Cave Near Divača

11.1 Methods

11.2 Infilled Cave Located South of Divača

11.2.1 Results of Mineralogical Analyses

11.2.2 Results of Palaeomagnetic Analyses

11.3 Conclusion

12 Palaeomagnetic Research of an Unroofed Cave Near Kozina

12.1 Morphological and Geological Circumstances

12.2 Site Location and Characteristics

12.3 Description of the Profile

12.4 Palaeomagnetic Analyses

12.4.1 Laboratory Procedures

12.4.2 Palaeomagnetic Research Results

12.4.3 Magnetostratigraphic Research Results

12.5 Findings

12.6 Conclusion

13 Sediments in the S-647 Cave in the Kastelec Tunnel

13.1 Speleomorphological Description of the Cave

13.2 Cave Sediments

13.3 Conclusion

| 19.2      | Karren Surface                                                           | 200  |
| 19.3      | Subsoil Stone Forests                                                    | 202  |
| 19.4      | Karst Cavities                                                           | 204  |
| 19.5      | Conclusion                                                               | 206  |
## 20 Palaeomagnetic Results from the Filled Karst Depression on the Motorway Section Hrastje–Lešnica

- **20.1 Profile** ................................................. 207
  - 20.1.1 Lithology ........................................ 207
  - 20.1.2 Palaeomagnetic Results ....................... 207
- **20.2 Conclusion** .......................................... 212

## 21 The Karst Between Lešnica and Kronovo, Revealed During the Motorway Construction

- **21.1 Newly Discovered Karst Phenomena** ................. 213
  - 21.1.1 Subsoil Stone Forests .......................... 213
  - 21.1.2 Underground Cavities .......................... 218
- **21.2 Conclusion** .......................................... 219

## Part IV Comparison with Low and Covered Karst and Karst in Breccia: The Vipava Valley

## 22 The Karst in the Breccia of Rebrnice in the Vipava Valley

- **22.1 Geological Conditions in the Area of the Road Route** 224
- **22.2 Geomorphological Development of the Slopes of Mount Nanos** ........................................... 226
- **22.3 Characteristic Relief Forms in the Motorway Route** ......................................................... 229
  - 22.3.1 Structural Forms .................................. 229
  - 22.3.2 The Structural Level of Mount Nanos ......... 229
  - 22.3.3 Relief Forms on Carbonate Rubble or Breccia .......................................................... 230
  - 22.3.4 Breakdown Forms ................................ 230
  - 22.3.5 Breakdown Blocks ............................... 230
  - 22.3.6 Erosion Forms .................................... 230
  - 22.3.7 Hummocky Ground ............................... 231
- **22.4 Anthropogenic Forms** ................................ 231
  - 22.4.1 Paths Reshaped Due to Erosion ................. 231
  - 22.4.2 Escarpments, Piles and Dry Walls ............. 231
- **22.5 Breccia Formation** .................................. 231
- **22.6 Breccia Karstification and Cavities** ............... 233
- **22.7 Karstification of Flysch and of the Contact with Carbonates** ............................................ 236
- **22.8 Conclusion** .......................................... 241

## 23 Karst Phenomena Between Vipava and Selo

- **23.1 Geological Characteristics of the Region** ........ 243
- **23.2 Karst Cavernosity of the Rock** .................... 243
- **23.3 Along the Protective Archaeological Excavations on the Motorway Route Between Log and Ajdovščina** 244
- **23.4 Conclusion** .......................................... 247
Part V Planning

24 Karstologic Research for the Engineering of a Preliminary Design for the Motorway Section Bič–Hrastje, Subsection Ponikve–Hrastje, Sv. Ana Variant ........................................ 251
24.1 Geomorphological Conditions ........................................ 251
24.2 Caves .............................................................. 254
24.3 Hydrogeological and Hydrological Conditions ....................... 256
  24.3.1 Hydrological Measurements .................................... 258
  24.3.2 Directions and Velocities of the Underground Flow of Water ......................................................... 260
  24.3.3 Physicochemical Properties and Water Quality .............. 262
  24.3.4 The Importance of the Karst Water in the Area of the Temenica River ................................................. 263
24.4 Conclusion .......................................................... 263

25 Planning of the Motorway in the Pivka and Reka Rivers Catchment Areas, the Evaluation and Reduction of Impacts on Known Caves ........................................... 265
25.1 Geomorphological and Hydrogeological Situation Along the Proposed Motorway .................................................. 265
  25.1.1 Possible Impacts Due to Motorway Construction and Methodology ......................................................... 266
25.2 Results .................................................................. 268
  25.2.1 Direct Impact ..................................................... 268
  25.2.2 Indirect Impact by Vibration ..................................... 269
  25.2.3 Downstream Indirect Impact by Waters ....................... 270
  25.2.4 Upstream Indirect Impact by Water ............................ 270
  25.2.5 Hydrodynamical Impact ......................................... 270
25.3 The Karstological/Speleological Mitigation and Optimization of the Planned Motorway .............................................. 271
25.4 Conclusion ............................................................ 272

Part VI Construction and Use of Motorways with Regard to Karst Waters

26 Biological Assessment of Habitats and Fauna in the Škocjanske Jame Caves and Reka River in the Motorway Construction Area of Influence ................................................. 275
26.1 Description of Methods and Techniques for Biological Sampling of Invertebrates in Aquatic Ecosystems ......................... 275
26.2 Biodiversity in the Underground Reka River ......................... 278
26.3 Fauna of Percolating Water in Škocjanske Jame Caves .............. 279
26.4 Terrestrial Fauna of Škocjanske Jame Caves .......................... 280
26.5 Water Quality of the Reka River ....................................... 281
27 Impact of Motorways on Karst Waters

27.1 Motorways as a Source of Pollution

27.1.1 Pollutants from Road Runoff

27.1.2 Motorway Runoff Impact on Biota

27.1.3 Protection and Remediation Measures

27.2 Particularity of Motorway Runoff in Karst Areas

27.2.1 Pollution of a Karst Water Source Due to the Spillage of Gas Oil During a Traffic Accident

27.2.2 Pollution of a Karst Water Source Due to the Spillage of Gas Oil from a Warehouse for Oil Derivatives

27.3 Conclusion

28 Transfer of Contamination from Motorways Towards Karst Water Sources: The Example of the Malenščica Karst Spring

28.1 Measures for Limiting the Negative Impact of Motorways on Water Sources

28.2 The Motorway in the Recharge Area of the Karst Water Source of Malenščica

28.3 The Composition of Water Flowing off the Motorway

28.3.1 Initial Periodic Measurements

28.3.2 Sampling During Precipitation Events

28.4 The Composition of Water Flowing from the Oil Separator

28.5 Transfer of Contaminants Through the Karst Aquifer

28.5.1 Tracer Test in the Area of the Oil Separator B at Postojna

28.6 Conclusion

Regarding the Planning and the Construction of Slovenian Motorways in the Karst Region
