- Author biographies vii
- Abbreviations ix
- Preface xi

## 1 Introduction to pneumonia 1

- Introduction 1
- Overview of bacterial pneumonia 1
- References 4

## 2 Epidemiology, etiology, and risk factors of bacterial pneumonia 7

- Epidemiology 7
- Microbial etiology 11
- Antibiotic resistance 15
- Risk factors 19
- Summary points 23
- References 23

## 3 Pathology and clinical features of pneumonia 29

- Pathophysiology of pneumonia 29
- Pathogenesis of pneumonia 34
- Signs and symptoms of pneumonia 34
- Prognosis of pneumonia 35
- Summary points 36
- References 36

## 4 Diagnosis and classification of pneumonia 39

- Diagnosis and classification of hospital-acquired and ventilator-associated pneumonia 39
- Diagnosis of community-acquired pneumonia 40
### 5 Methods for preventing pneumonia

- Guidelines for the prevention of pneumonia
- Preventative strategies to reduce the risk of community-acquired pneumonia in adults
- Nonpharmacological prevention of hospital-acquired and ventilator-associated pneumonia
- Vaccination
- New vaccines
- Summary points
- References

### 6 Management of pneumonia

- Guidelines for management and treatment of pneumonia
- Medical management of pneumonia
- Guidelines for the antimicrobial treatment of community-acquired pneumonia
- Guidelines for the antimicrobial treatment of hospital-acquired/ventilator-associated pneumonia
- Emerging therapies for the treatment of community-acquired pneumonia
- Emerging therapies for the treatment of hospital-acquired/ventilator-associated pneumonia
- Management of pneumonia in special populations
- Summary points
- References
