<b>Acknowledgements</b> .....	vii
<b>Dedication</b> .....	viii
<b>About the Authors</b> .....	ix
<b>Foreword</b>	
by Charles F. Bolden Jr, former Shuttle Commander and NASA Administrator .....	xiii
<b>Preface</b> .....	xvi
<b>1. The Nautilus paradigm</b> .....	1
A Nautilus for space .....	2
Nuclear-thermal or nuclear-electric? .....	5
Electric propulsion: a path from solar to nuclear .....	7
<b>2. A fast track to deep space</b> .....	10
A time for change .....	12
Charting the global path to space exploration .....	13
<b>3 Early VASIMR® development</b> .....	16
The realm of plasma physics .....	17
Space electric power .....	19
Electric propulsion and plasma rockets .....	20
A meeting of two cultures .....	24
The electric propulsion community .....	27
From theory to experiment .....	29
<b>4 Probing the physics</b> .....	35
Seeking cultural convergence .....	35
From tragedy, change .....	37
A new VASIMR® home in Texas .....	42

vi **Contents**

Home at last – sort of.....	46
Exploring VASIMR® trajectories to Mars.....	52
Plasma with room to grow.....	54
From competition to collaboration.....	59
<b>5 The breakthroughs.....</b>	<b>63</b>
The helicon plasma source.....	65
The team looks skyward.....	70
Team consolidation and international expansion.....	74
The gathering storm.....	80
The VASIMR® peer review.....	89
Review conclusions and the way forward.....	104
<b>6 A new company is born.....</b>	<b>113</b>
A painful separation, a time to look forward.....	119
Sole survivor.....	123
A new home.....	128
The VX-200.....	133
<b>7 The VX-200 and the path to commercialization.....</b>	<b>137</b>
From rocket science to financial innovation.....	143
Probing the VX-200™ performance envelope.....	145
The rocky road to the ISS.....	150
<b>8 A bridge to the future.....</b>	<b>155</b>
The VASIMR® orbital sweeper.....	156
The <i>Ocelot</i> ™ solar-electric power and propulsion module.....	158
Building a cislunar transportation scaffolding.....	160
In-space resources.....	161
Fast deliveries to the depths of the solar system.....	165
<b>9 Mission threats and potential solutions.....</b>	<b>168</b>
The risks of venturing further afield.....	170
Life support and crew safety.....	178
<b>10 The VASIMR® nuclear-electric mission architecture.....</b>	<b>180</b>
First VASIMR® optimal trajectories under variable $I_{sp}$ .....	180
Early abort scenarios.....	183
Further model improvements: Copernicus.....	188
<b>Index.....</b>	<b>198</b>

To Mars and Beyond, Fast!  
How Plasma Propulsion Will Revolutionize Space  
Exploration

Chang Díaz, F.; Seedhouse, E.

2017, XVI, 201 p. 74 illus., 68 illus. in color., Softcover

ISBN: 978-3-319-22917-1
