

Contents

1	Introduction	1
1.1	Internet and Energy Consumption	1
1.2	Optical Interconnects	3
1.3	State-of-the-Art of Vertical-Cavity Surface-Emitting Lasers for Optical Interconnects	5
1.4	Future Requirements	8
1.5	Dissertation Contribution	9
1.6	Organization of the Dissertation	10
	References	10
2	VCSEL Fundamentals	13
2.1	Laser Principle	13
2.1.1	Creation of Light	13
2.1.2	Population Inversion	15
2.1.3	Population Inversion in Semiconductor Laser Diodes	16
2.1.4	Laser Cavity	18
2.2	Confinement of Light and Current in VCSELs	20
2.2.1	Distributed Bragg Reflectors	20
2.2.2	Oxide-Apertures in VCSELs	37
	References	42
3	Dynamic Properties of Oxide-Confined VCSELs	45
3.1	Rate Equations	45
3.2	Small-Signal Modulation	48
	References	50
4	Dynamic Energy Efficiency	51
4.1	Dissipated Heat-to-Bit Rate Ratio (HBR) and Energy-to-Data Ratio (EDR)	51
4.2	Modulation Factor M	53

4.3	Impact of the Oxide-Aperture Diameter on the Energy Efficiency	57
	References	61
5	Fabrication of High-Speed VCSELs	63
5.1	Process Flow Overview	63
5.2	<i>In Situ</i> -Controlled Selective Wet Oxidation	66
5.3	High-Frequency Mask Layout	68
	References	73
6	VCSEL Design.	75
6.1	Oxide-Confined 850-nm VCSELs for Optical Interconnects.	75
6.2	Oxide-Confined 980-nm VCSELs for Optical Interconnects.	76
	References	84
7	850-nm VCSEL Results	87
7.1	Static Properties.	87
7.1.1	LIV-Characteristics at Room Temperature.	88
7.2	Small-Signal Modulation Response.	93
7.2.1	D-Factor and MCEF Versus Oxide-Aperture Diameter	93
7.2.2	Power-to-Bandwidth Ratio and Energy per Bit for a 3 μm Oxide-Aperture Diameter VCSEL	95
7.2.3	Impact of the Oxide-Aperture Diameter on the Energy Efficiency: Comparison of 3 μm and 5 μm Oxide-Aperture Diameter VCSELs.	98
7.2.4	Determination of the Optimum Oxide-Aperture Diameter for Energy-Efficient Operation.	103
7.3	Energy-Efficient Data Transmission	112
7.3.1	Impact of the Oxide-Aperture Diameter on the Energy Efficiency of the Data Transmission.	113
7.4	Energy-Efficient Data Transmission up to 40 Gb/s and Across up to 1 km of MMF.	116
	References	122
8	980-nm VCSEL Results	125
8.1	Static Properties.	126
8.1.1	Temperature Dependence of the LIV-Characteristics of a 4.5 μm Oxide-Aperture Diameter VCSEL	126
8.1.2	Impact of the Oxide-Aperture Diameter on the Static Temperature Stability of the 980-nm VCSELs.	129
8.2	Small-Signal Modulation.	131
8.2.1	Temperature Stability of the Modulation Bandwidth of a 5 μm Oxide-Aperture Diameter VCSEL.	131
8.2.2	Temperature Stability of the Energy Efficiency of an 5 μm Oxide-Aperture Diameter 980-nm VCSEL	133

- 8.2.3 Impact of the Oxide-Aperture Diameter on the Temperature Stability of the Modulation Bandwidth. 137
- 8.2.4 Impact of the Oxide-Aperture Diameter on the Temperature Stability of the Energy Efficiency 139
- 8.3 Impact of the Photon Lifetime on the Temperature Stability 144
 - 8.3.1 Impact of the Photon Lifetime on Static Properties and Their Temperature Stability. 145
 - 8.3.2 Impact of the Photon Lifetime on the Modulation Bandwidth and Its Temperature Stability. 146
 - 8.3.3 Impact of the Photon Lifetime on the Energy Efficiency and Its Temperature Stability. 149
 - 8.3.4 Trade-Offs Between Bit Rate, Energy Efficiency, and Current Density at 85 °C. 153
- 8.4 Data Transmission 155
- References 157
- 9 Conclusions and Outlook 159**
 - 9.1 Summary and Conclusions 159
 - 9.2 Outlook 161
- Appendix A: Process Flow. 163**
- Appendix B: Own Publications 169**
- Curriculum Vitae 179**

Energy-Efficient VCSELs for Optical Interconnects

Moser, P.

2016, XV, 182 p., Hardcover

ISBN: 978-3-319-24065-7
