# Contents

1 Introduction ................................................................. 1  
1.1 Correlated Many-Particle Systems ................................. 2  
1.2 Thermodynamic Properties of Correlated Systems ............. 9  
1.3 Ultrafast Nonequilibrium Phenomena ............................. 12  
1.3.1 Dynamics of Isolated Systems ................................. 13  
1.3.2 Interaction of Matter with Short Laser Pulses ............... 14  
1.3.3 Overview of Relaxation Processes ......................... 18  
1.4 The Boltzmann Equation–Successes and Failure ............... 20  
1.4.1 An Elementary Introduction to the Boltzmann Equation ... 20  
1.4.2 Unphysical Ultrafast Relaxation in Charged Particle Systems 23  
1.5 Improved Theoretical Concepts ..................................... 24  
1.5.1 Outline of this Book .............................................. 26  
1.6 Problems ................................................................. 27  

2 The Method of Reduced Density Operators ....................... 29  
2.1 Density Operator. Von Neumann Equation ...................... 29  
2.2 BBGKY-Hierarchy ....................................................... 32  
2.2.1 Reduced Density Operators. Equations of Motion .......... 32  
2.2.2 Conservation Laws ............................................... 37  
2.3 Basic Representations of the Hierarchy ......................... 41  
2.3.1 Coordinate Representation .................................... 41  
2.3.2 Wigner Representation ......................................... 43  
2.3.3 Classical Limit and Quantum Corrections .................. 45  
2.3.4 Spatially Homogeneous Systems. Momentum Representation 46
6.3 Markov Limit ....................................................... 132
6.4 Non-Markovian Quantum Landau Equation
with Exchange Renormalization and Time-Dependent
Fields ................................................................. 134
6.5 Problems ........................................................... 139

7 Non-Markovian Kinetic Equations with Selfenergy .......... 141
7.1 *Selfenergy in Density Operator Approach ..................... 142
7.2 Renormalized Binary Correlation Operator ...................... 146
7.3 Non-Markovian Quantum Landau Equation
with Selfenergy ...................................................... 148
    7.3.1 Properties of the Landau Equation.
        Memory Effects .............................................. 149
    7.3.2 Dynamics of Physical Observables. Energy
        Conservation ................................................. 154
    7.3.3 Markov Limit and Corrections. Retardation
        Expansion .................................................... 158
    7.3.4 *Approximations for the Selfenergy ....................... 163
7.4 *Discussion of the Selfenergy Concept. Relation
    to Green Functions Results .................................... 166
7.5 Problem ........................................................... 169

8 Properties of the Quantum Kinetic Equation ...................... 171
8.1 Markovian Dynamics of Macroscopic Observables .......... 172
8.2 Irreversibility. H-Theorem. Equilibrium Solution
    of the Markovian Kinetic Equation ......................... 173
8.3 Equilibrium Correlations ........................................ 176
8.4 Non-Markovian Dynamics of Macroscopic Observables .... 177
8.5 Total Energy Conservation in Non-Markovian Kinetics .... 179
8.6 H-Theorem in Non-Markovian Kinetics ......................... 180
8.7 Problems ........................................................... 182

9 Strong Coupling Effects. Ladder (T-Matrix) Approximation .... 183
9.1 Generalized Binary Collision Approximation .................... 184
9.2 *Selfenergy in Ladder (T-Matrix) Approximation ............. 185
9.3 Correlation Operator in Binary Collision Approximation .... 187
    9.3.1 Propagators and Scattering Quantities ................. 187
    9.3.2 Moller Operators and T-Operators ...................... 190
    9.3.3 Correlation Operator in Binary Collision
        Approximation ............................................... 192
    9.3.4 *Gradient Expansion of $g_{12}$ and Physical
        Observables .................................................. 195
    9.3.5 *Recovery of the Generalized Kadanoff-Baym
        Ansatz ....................................................... 198
