## Contents

### Part I Basic Object-Oriented Concepts

1 **Introduction** ........................................ 3  
   1.1 What Is Object-Oriented Development? ............... 4  
   1.2 Key Concepts of Object-Oriented Design .............. 5  
   1.3 Other Related Concepts ............................... 7  
      1.3.1 Modular Design and Encapsulation ............. 7  
      1.3.2 Cohesion and Coupling ......................... 7  
      1.3.3 Modifiability and Testability ................. 8  
   1.4 Benefits and Drawbacks of the Paradigm ............. 8  
   1.5 History ........................................... 9  
   1.6 Discussion and Further Reading ...................... 10  
   1.7 Exercises ......................................... 11  
   References ............................................ 11  

2 **Basics of Object-Oriented Programming** ............... 13  
   2.1 The Basics ......................................... 13  
   2.2 Implementing Classes ............................... 16  
      2.2.1 Constructors .................................. 20  
      2.2.2 Printing an Object ............................ 22  
      2.2.3 Static Members ................................ 23  
   2.3 Programming with Multiple Classes .................. 25  
   2.4 Interfaces ......................................... 28  
      2.4.1 Implementation of StudentLinkedList .......... 30  
      2.4.2 Array Implementation of Lists ................. 33  
   2.5 Abstract Classes ................................... 35  
   2.6 Comparing Objects for Equality ...................... 36  
   2.7 A Notation for Describing Object-Oriented Systems .. 37  
      2.7.1 Class Diagrams ................................ 41  
      2.7.2 Use Cases and Use Case Diagrams .............. 41  
      2.7.3 Sequence Diagrams .............................. 42  
   References ............................................ 11
3 Relationships Between Classes

3.1 Association

3.1.1 Characteristics of Associations

3.2 Inheritance

3.2.1 An Example of a Hierarchy

3.2.2 Inheriting from an Interface

3.2.3 Polymorphism and Dynamic Binding

3.2.4 Protected Fields and Methods

3.2.5 The Object Class

3.3 Genericity

3.4 Discussion and Further Reading

3.4.1 A Generalised Notion of Conformance

3.5 Exercises

References

4 Language Features for Object-Oriented Implementation

4.1 Organising the Classes

4.1.1 Creating the Files

4.1.2 Packages

4.1.3 Protected Access and Package Access

4.2 Collection Classes

4.3 Exceptions

4.4 Run-Time Type Identification

4.4.1 Reflection: Using the Class Object

4.4.2 Using the instanceof Operator

4.4.3 Downcasting

4.5 Graphical User Interfaces: Programming Support

4.5.1 The Basics

4.5.2 Event Handling

4.5.3 More on Widgets and Layouts

4.5.4 Drawing Shapes

4.5.5 Displaying a Piece of Text

4.6 Long-Term Storage of Objects

4.6.1 Storing and Retrieving Objects

4.6.2 Issues in Storing and Retrieving Objects

4.6.3 The Java Serialization Mechanism

4.7 Discussion and Further Reading

4.8 Exercises
7.3.4 Implementing Singletons ........................................... 197
7.3.5 Further Reading .......................................................... 197
7.4 Exercises .................................................................. 197
References .................................................................. 198

8 How ‘Object-Oriented’ Is Our Design? ........................................ 199
8.1 Introduction ................................................................ 199
8.2 A First Example of Refactoring ........................................... 200
  8.2.1 A Library that Charges Fines: Initial Solution ................. 200
  8.2.2 Refactoring the Solution ............................................. 204
8.3 A Second Look at RemoveBooks .......................................... 208
8.4 Using Generics to Refactor Duplicated Code ......................... 211
  8.4.1 A Closer Look at the Collection Classes ......................... 212
  8.4.2 Instantiating Catalog and MemberList ......................... 216
8.5 Discussion and Further Reading ......................................... 218
8.6 Exercises .................................................................. 219
Reference .................................................................. 219

Part III Advanced Concepts in Object-Oriented Design

9 Exploring Inheritance .......................................................... 223
  9.1 Introduction ................................................................. 223
  9.2 Applications of Inheritance ............................................. 224
    9.2.1 Restricting Behaviours and Properties ......................... 224
    9.2.2 Abstract Superclass .................................................. 224
    9.2.3 Adding Features ...................................................... 225
    9.2.4 Hiding Features of the Superclass .............................. 226
    9.2.5 Combining Structural and Type Inheritance ............... 227
  9.3 Inheritance: Some Limitations and Caveats ......................... 227
    9.3.1 Deep Hierarchies ...................................................... 227
    9.3.2 Lack of Multiple Inheritance .................................... 228
    9.3.3 Changes in the Superclass ........................................ 228
    9.3.4 Typing Issues: The Liskov Substitution Principle ......... 229
    9.3.5 Addressing the Limitations ...................................... 232
  9.4 Type Inheritance .......................................................... 232
    9.4.1 A Simple Example .................................................... 233
    9.4.2 The Cloneable Interface ............................................ 234
    9.4.3 The Runnable Interface .......................................... 237
  9.5 Making Enhancements to the Library Class ......................... 239
    9.5.1 A First Attempt ....................................................... 239
    9.5.2 Drawbacks of the Above Approach ............................ 242
  9.6 Improving the Design ..................................................... 244
    9.6.1 Designing the Hierarchy ............................................ 244
    9.6.2 Invoking the Constructors ...................................... 246
11 Interactive Systems and the MVC Architecture

11.1 Introduction

11.2 The MVC Architectural Pattern

11.2.1 Examples

11.2.2 Implementation

11.2.3 Benefits of the MVC Pattern

11.3 Analysing a Simple Drawing Program

11.3.1 Specifying the Requirements

11.3.2 Defining the Use Cases

11.4 Designing the System

11.4.1 Defining the Model

11.4.2 Defining the Controller

11.4.3 Selection and Deletion

11.4.4 Saving and Retrieving the Drawing

11.5 Design of the Subsystems

11.5.1 Design of the Model Subsystem

11.5.2 Design of Item and Its Subclasses

11.5.3 Design of the Controller Subsystem

11.5.4 Design of the View Subsystem

11.6 Getting into the Implementation

11.6.1 Item and Its Subclasses

11.6.2 Implementation of the Model Class

11.6.3 Implementation of the Controller Class

11.6.4 Implementation of the View Class

11.6.5 The Driver Program

11.6.6 A Critique of Our Design

11.7 Implementing the Undo Operation

11.7.1 Employing the Command Pattern

11.7.2 Implementation

11.8 Drawing Incomplete Items

11.9 Adding a New Feature

11.10 Pattern-Based Solutions

11.10.1 Examples of Architectural Patterns

11.11 Discussion and Further Reading

11.11.1 Separating the View and the Controller

11.11.2 The Space Overhead for the Command Pattern

11.11.3 How to Store the Items
Object-Oriented Analysis, Design and Implementation
An Integrated Approach
Dathan, B.; Ramnath, S.
2015, XIX, 471 p. 166 illus. in color., Softcover
