

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Introduction	1
1.2	Vapor Phase Thin Film Deposition Techniques	3
1.2.1	Conformality of Vapor Phase Deposition Techniques	3
1.2.2	Sticking Probability	5
1.2.3	Knudsen Number	6
1.3	Substrates and Scaffolds	8
1.3.1	Deterministic Substrates	9
1.3.2	Porous and Disordered Substrates	11
1.4	Historical Overview	12
1.4.1	Conformality in Semiconductor Manufacturing	12
1.4.2	Chemical Vapor Infiltration	14
1.4.3	Chemical Engineering and Heterogeneous Catalysis	15
1.5	Summary	16
	References	16
<b>2</b>	<b>Physical and Chemical Vapor Deposition Techniques</b>	19
2.1	Physical Vapor Deposition Methods: Evaporation and Sputtering	19
2.1.1	Evaporation	20
2.1.2	Sputtering	21
2.1.3	Approaches to Improve Step Coverage in PVD Methods	23
2.2	Chemical Vapor Deposition	23
2.2.1	Impact of Kinetics on the Conformality of CVD Processes	24
2.2.2	Strategies to Improve Conformality in CVD	29
2.3	Atomic Layer Deposition	30
2.3.1	Introduction	30
2.3.2	Models of ALD Surface Kinetics	31
2.3.3	Application of ALD to High Surface Area Materials	34

2.4	Summary	35
	References.	36
<b>3</b>	<b>Fundamentals of Gas Phase Transport in Nanostructured Materials</b>	<b>39</b>
3.1	Ballistic Models	41
3.1.1	Fundamental Equations	41
3.1.2	Source Gas Distribution	43
3.1.3	Particle Reemission Model	44
3.1.4	View Factors	45
3.2	Single Particle Approaches to Ballistic Transport	50
3.2.1	Kinetic Monte Carlo Simulations	51
3.2.2	Markov Chain Formulation	53
3.3	Continuum Description: Diffusion-Based Models	56
3.3.1	Knudsen Diffusion Coefficient	57
3.3.2	Transitional Flow	61
3.3.3	Diffusion in Micropores	62
3.3.4	Diffusion in Polymers	64
3.3.5	Transport in Presence of Reversible Adsorption/ Desorption	65
3.4	Summary	67
	References.	67
<b>4</b>	<b>Thin Film Growth in Nanostructured Materials</b>	<b>69</b>
4.1	PVD and Early Line of Sight Approximations	69
4.1.1	Directed Flow	70
4.1.2	Isotropic Case	71
4.2	Constant Sticking Probability	72
4.2.1	Diffusion-Based Model	74
4.2.2	Impact of Reaction Probability on Film Conformality	75
4.3	Pressure-Dependent Kinetics	79
4.3.1	Conformal Zone for Single-Source Precursors	81
4.3.2	Superconformal Processes and Conformality Enhancement	85
4.4	Self-limited Surface Kinetics: Atomic Layer Deposition	90
4.4.1	Infiltration Kinetics	90
4.4.2	Non-ideal ALD Processes	97
4.5	Summary	98
	References.	98
<b>5</b>	<b>Advanced Concepts</b>	<b>101</b>
5.1	Predicting Shape Evolution	101
5.1.1	Lagrangian Methods	102
5.1.2	Eulerian Methods	103
5.1.3	String Methods	103
5.1.4	Method of Characteristics	106

- 5.1.5 Cell or Volume of Fluid Methods . . . . . 114
- 5.1.6 Level Set Methods . . . . . 115
- 5.1.7 Pore Constriction Models . . . . . 119
- 5.2 Bridging Feature and Reactor Scales . . . . . 120
  - 5.2.1 Effective Reactivity Approach. . . . . 121
  - 5.2.2 Mesoscale Model Approach . . . . . 122
  - 5.2.3 Effective Reaction Probability of High Surface Area Materials. . . . . 124
- 5.3 Summary . . . . . 124
- References. . . . . 125
- Index** . . . . . 127

Growth and Transport in Nanostructured Materials

Reactive Transport in PVD, CVD, and ALD

Yanguas-Gil, A.

2017, XI, 128 p. 57 illus., 20 illus. in color., Softcover

ISBN: 978-3-319-24670-3
