

Contents

1 Introduction	1
1.1 Some General Perspective	1
1.1.1 Inviscid Systems of Conservation Laws	1
1.1.2 One-Dimensional Systems	2
1.1.3 Source Terms Inclusion	3
1.2 This Book in a Nutshell	4
1.2.1 Outline of the Contents	4
1.2.2 The Ariadne’s Thread	5
References	6
2 Local and Global Error Estimates	9
2.1 Notion of Local Truncation Error (LTE).	10
2.1.1 Semi-discretization in Space (Method of Lines)	11
2.1.2 Local Truncation Error (LTE) and Second-Order Accuracy	13
2.1.3 Illustration of Two Errors Not Controlled by LTE.	14
2.2 Linearized Shallow Water with Topography	16
2.2.1 Study of the Error Growth in Time	16
2.2.2 Analysis of Scheme 1	17
2.2.3 Analysis of Scheme 2	18
2.2.4 Summary and Illustration	18
2.3 Preliminary Conclusions	20
References	21
3 Position-Dependent Scalar Balance Laws	23
3.1 Non-resonant Wave-Front Tracking Algorithm	24
3.1.1 Properties of the Riemann Invariant $w(u, a)$	25
3.1.2 Wave-Front Tracking Approximations	27
3.1.3 Stability Estimates, Accretive Case	28
3.1.4 Stability Estimates, Non Accretive Case	30

- 3.1.5 Limit $\delta \rightarrow 0$ and Recovery of Kruřkov’s Entropy Solution. 33
- 3.2 Periodic Version of Wavefront Tracking. 35
 - 3.2.1 A 1-Periodic, Non-Accretive Equation. 35
 - 3.2.2 A Specific 1-Periodic Lyapunov Functional 36
- 3.3 Numerical Validation for Scalar Balance Laws 38
 - 3.3.1 A First Numerical Validation 38
 - 3.3.2 Numerical Validation for Periodic Forcing 40
 - 3.3.3 Practical Measurements of the Global L^1 Error 42
- References 43
- 4 Lyapunov Functional for Inertial Approximations 45**
 - 4.1 A Class of Position-Dependent Semilinear Systems 45
 - 4.2 Main Error Estimate \mathcal{E}_1 for Weak Relaxation Regime 47
 - 4.2.1 Statement and First Comments 47
 - 4.2.2 Strategy of Proof and Algorithmic Implications 48
 - 4.3 Construction of the Well-Balanced Approximation 49
 - 4.3.1 First Considerations on the 3×3 Riemann Problem 50
 - 4.3.2 Shape of Positively Invariant Domains 53
 - 4.3.3 Total Variation Estimate of the WB Approximation 56
 - 4.4 Refined Scattering Interaction Estimates. 57
 - 4.4.1 A Lemma Based on Sub-characteristic Condition 58
 - 4.4.2 Accurate Interaction Estimates for WB Approximations 62
 - 4.5 An L^1 Error Estimate Through a Lyapunov Functional. 68
 - 4.5.1 Decay Outside Interactions. 71
 - 4.5.2 Decay at Interaction Times. 74
 - 4.5.3 Decay of Lyapunov Functional for Weak Relaxation. 75
 - References 78
- 5 Entropy Dissipation and Comparison with Lyapunov Estimates 81**
 - 5.1 A Time-Dependent L^1 Error Estimate \mathcal{E}_2 81
 - 5.1.1 Entropy Dissipation Inequalities 81
 - 5.1.2 Resulting L^1 Error Bounds. 84
 - 5.2 Practical Comparisons Between \mathcal{E}_1 and \mathcal{E}_2 87
 - 5.2.1 Comparing the Two Estimates on an Example 87
 - 5.2.2 An Elementary Numerical Illustration 87
 - References 90
- 6 Conclusion and Outlook 91**
 - 6.1 Extension to Weakly Nonlinear (Poisson) Coupling 92
 - 6.1.1 First Considerations on 1D Poisson Coupling. 92
 - 6.1.2 Derivation of a Stationary Exact Solution 93
 - 6.2 A Glimpse on the Difficulty of 2D Interactions 95
 - 6.2.1 Exact Kirchhoff Solution of the 2D Riemann Problem. 95
 - 6.2.2 Derivation of the Expression of $p(\xi, \eta)$ 97

- 6.2.3 Dirac Vorticity and the Mach Cone Structure 101
- 6.2.4 Artificial Vorticity and Shortcomings
of Riemann Solvers. 104
- 6.3 Putting Our Results in Perspective. 105
- References 106
- Index 109**

Error Estimates for Well-Balanced Schemes on Simple
Balance Laws

One-Dimensional Position-Dependent Models

Amadori, D.; Gosse, L.

2015, XV, 110 p. 24 illus., 15 illus. in color., Softcover

ISBN: 978-3-319-24784-7
