Contents

1 Introduction ................................................................. 1
   1.1 Complex Multi-Level Systems ................................. 1
   1.2 Microsimulation and Agent-Based Models ................. 2
   1.3 Markov Chain Description of Agent-Based Models ......... 4
   1.4 Markov Chain Aggregation ...................................... 5
   1.5 Micro-Macro Transition in the Voter Model ............... 7
   1.6 Outline ............................................................. 8
   References .................................................................. 10

2 Background and Concepts ......................................... 11
   2.1 Agent-Based and Related Models ............................. 11
   2.2 Markov Chain Formalization of Agent-Based Models ..... 14
      2.2.1 A Very Short Introduction to the Markov Chain Setting 16
   2.3 Lumpability and State Space Aggregation .................. 17
      2.3.1 Strong Lumpability ......................................... 18
      2.3.2 Weak Lumpability ........................................... 20
      2.3.3 Nearly Lumpable and Non-lumpable Aggregation .... 20
      2.3.4 Aggregation in Dynamical Systems .................... 21
   2.4 The Information-Theoretic Perspective ...................... 22
   2.5 Motivation: Towards a Markov Chain Theory of Aggregation for Agent-Based Models ................. 24
      2.5.1 Bridging a Gap ............................................. 24
      2.5.2 The Micro-Macro Link .................................... 25
      2.5.3 Computational Emergence and Aggregativity ....... 26
   References .................................................................. 27

3 Agent-Based Models as Markov Chains ....................... 35
   3.1 Basic Ingredients of Agent-Based Models ................. 35
      3.1.1 Agents as Elementary Units ............................. 36
      3.1.2 The Environment .......................................... 37
      3.1.3 Interaction Rules ......................................... 38
      3.1.4 Iteration Process .......................................... 39
