1 The New Worlds of Synthetic Biology—Synopsis	1
Margret Engelhard, Michael Bölker, Nediljko Budisa, Kristin Hagen, Christian Illies, Rafael Pardo-Avellaneda, Georg Toepfer and Gerd Winter	
1.1 Attraction of Synthetic Biology	2
1.2 A Mosaic-like Field on the Move.	3
1.3 Challenges to the Societal and Ethical Evaluation	6
1.4 Relevant Features and Concepts of Synthetic Biology	7
1.5 Layer Model	8
1.6 Challenge to the Concept of “Life”	10
1.7 Ethical Evaluation	12
1.8 Synthetic Biology as an Object of Public Perceptions.	16
1.9 Legal Challenges	19
1.9.1 Law Enabling and Regulating Synthetic Biology	20
1.9.2 Law Fostering Synthetic Biology	21
1.9.3 Law Ensuring Benefit Sharing	22
1.10 Outlook	22
References	23
2 Synthetic Biology: Diverse Layers of Live	27
Michael Bölker, Margret Engelhard and Nediljko Budisa	
2.1 Introduction	28
2.2 The Main Research Agendas of Synthetic Biology	30
2.2.1 The Engineering Branch of Synthetic Biology	31
2.2.2 Orthogonal Biology	32
2.2.3 Protocell Biology—Recapitulation of Evolution	35
2.3 A Layer Model to Describe and Classify Natural and Synthetic Organisms in Different Fields of Synthetic Biology	36
2.3.1 Layer of Genetically Modified and Artificially Designed Cells	40

- 2.3.2 Layer of Orthogonal Cells (Xenobiology) 43
- 2.3.3 Layer of Simple Life Forms and Protocells 46
- 2.4 Conclusions 47
- References 47
- 3 Old and New Risks in Synthetic Biology: Topics and Tools for Discussion 51**
- Margret Engelhard, Michael Bölker and Nediljko Budisa
- 3.1 Synthetic Biology in the Risk Discussion 52
 - 3.1.1 Background: The Mosaic-like Structure of the Field 53
 - 3.1.2 Dichotomy of the Attributes Novelty and Continuity 55
 - 3.1.2.1 Novelty in the Synthetic Biology Context 56
 - 3.1.2.2 Invalidity of the “Continuity Argument” in the Context of Risk Evaluation of Synthetic Biology. 57
 - 3.1.3 Scope of the Synthetic Biology Politicized 58
 - 3.1.4 Time Point and Speed of the Scientific Development Differentiated 58
- 3.2 Level of the Risk Discussion 59
- 3.3 New Features of Synthetic Biology Relevant for Risk Evaluation. 60
 - 3.3.1 Depth of Intervention, Complexity and Predictability 60
 - 3.3.1.1 Depth of Intervention 60
 - 3.3.1.2 Predictability: Safety Concepts of Synthetic Biology 61
 - 3.3.2 Risk Assessment Challenged: Familiarity Principle and Speed of Developments 62
- 3.4 Special Cases of Risks Assessment in Synthetic Biology 62
 - 3.4.1 “The Farther, the Safer”? 63
 - 3.4.2 Sense Codon Reassignment in the Genetic Code and Its Possible Consequences. 64
 - 3.4.2.1 Natural Background 65
 - 3.4.2.2 Adaptive Features 66
 - 3.4.2.3 Technological Risk and Benefits 66
 - 3.4.3 The Innocence of Protocells 67
- 3.5 Summary and Outlook 67
- References 68
- 4 The Concept of Life in Synthetic Biology 71**
- Georg Toepfer
- 4.1 Four Episodes in the History of Artificial Life Research 74
- 4.2 Modes of Artificiality in Artificial Life Research. 79
- 4.3 Artificial Systems as Models for Living Systems 80
- 4.4 Modes of Vitality in Artificial Life Research 82
- 4.5 Can Artificially Designed Systems Be Instantiations of Life? 84
- References 86

5 New Debates in Old Ethical Skins 89
 Christian Illies

5.1 Ethics of Technology 90

5.2 Synthetic Biology—A Philosophical View 91

5.2.1 Synthetic Biology as a Climax of Modern Science
 and Technology 91

5.2.2 The Ethical Relevance of Synthetic Biology 94

5.3 Ethical Issues of Synthetic Biology 97

5.3.1 Does Synthetic Biology Need a New Ethics? 97

5.3.2 Risk. 98

5.3.3 Global Justice. 100

5.3.4 The ‘Playing God’ Argument. 101

5.3.5 Acting Under Uncertainty 106

5.3.6 New or Old Ethics? 110

5.4 The Need for New Ethical Debate and Its Problems 110

5.4.1 The Need for Debate 110

5.4.2 The Lack of a Public Debate 111

5.4.3 The Conceptual Challenge for Ethicists. 111

5.4.4 The Silence of the Labs? 114

5.4.5 Scientific and Public Language 115

5.5 The Three Moral Laws 117

5.5.1 A Moral Proposal 117

5.5.2 First Law: A Biotic Artefact May not Injure
 a Human Being. 118

5.5.3 Second Law: A Biotic Artefact Must Be Strictly
 Functional. 119

5.5.4 Third Law: A Biotic Artefact Must Be Protected. 121

5.5.5 Short Conclusion 122

References. 122

6 Synthetic Biology: Public Perceptions of an Emergent Field 127
 Rafael Pardo Avellaneda and Kristin Hagen

6.1 Introduction 128

6.2 The Space and Role of Public Perceptions of Emergent
 Technoscientific Areas 128

6.3 An Enlightenment Assumption: Resistance to Science
 as a Function of Lack of Knowledge 132

6.4 Changes in the Institutional and Cultural Framework
 for the Development of New Areas of Science 134

6.5 Positive Attitudes to Science and Reservations About
 Biotechnology 144

6.6 Public Views on an Emergent and Fuzzy Object:
 Synthetic Biology. 147

6.6.1 Low Level of Salience and the Study of Public Views. 148

6.6.2	Early Characterizations of Public Views on Synthetic Biology in the United States	151
6.6.3	Vistas on European Perceptions of Synthetic Biology.	154
6.6.3.1	Awareness of Synthetic Biology in Europe	154
6.6.3.2	Relative Weight of Different Criteria in the Evaluation of Synthetic Biology	156
6.6.3.3	Global Positions on the Acceptance of Synthetic Biology.	157
6.6.3.4	The Regulatory Regime for Synthetic Biology . . .	158
6.6.4	Synthetic Biology, Unnaturalness and “Playing God”.	163
6.7	Conclusion	165
	References	166
7	In Search for a Legal Framework for Synthetic Biology.	171
	Gerd Winter	
7.1	Introduction	172
7.2	Enabling and Regulating Synthetic Biology in View of Environmental and Health Risks	174
7.2.1	Constitutional Freedoms and the Regulation of Synthetic Biology.	174
7.2.2	Preventive Administrative Regulation	177
7.2.2.1	Applicability to Synthetic Biology of the GMO Regime.	178
7.2.2.2	Adequacy of the GMO Regime	182
7.2.3	Regulation Ex Post.	195
7.2.4	Conclusion	196
7.3	Promoting Synthetic Biology Through the Granting of Intellectual Property Rights	197
7.3.1	Patenting Life Forms	197
7.3.2	Patent—A Stimulus of What?	199
7.3.3	Applying Patent Law to Synthetic Biology	201
7.3.4	Copy Right for Synthetic Biology Programs?	203
7.4	Redistributing Benefits from Synthetic Biology	204
7.5	Summary	206
