

Contents

1 Introduction	1
1.1 Preserving the Environment	1
1.2 Sustainable and Green Chemistry	5
References	8
2 Green Metrics, an Abridged Glossary	11
2.1 Environmental Parameters for a Chemical Reaction	11
2.1.1 Mass Metrics	12
2.1.2 Environmental Metrics	18
2.1.3 Energy Metrics	20
References	23
3 Activation of Chemical Substrates in Green Chemistry	25
3.1 Methods of Activation	25
3.2 Carbon-Heteroatom Bond Formation	29
3.2.1 Oxidation/Reduction	29
3.2.2 <i>N</i> -Acylation and Alkylation	36
3.2.3 <i>O</i> -Acylation and Alkylation	41
3.3 Carbon–Carbon Bond Formation	43
References	56
4 Renewable Resources: From Refinery to Bio-refinery	63
4.1 Shifting to Renewable	63
4.2 Chemicals from the Biorefinery	65
4.2.1 Alcohols, Glycols and Epoxides	65
4.2.2 Aldehydes, Ketones and Derivatives	68
4.2.3 Carboxylic Acids and Derivatives	70
4.2.4 Hydrocarbons	73
References	74
5 The Solvent Issue	77
References	84

6	Process Intensification in Organic Synthesis	87
6.1	Green Chemical Engineering and Green Chemistry	87
6.2	Progress Intensification	89
	References	101
7	Conclusions and Outlook	105
	References	106
	Index	107
