1	Introduction	1
1.1	Motivation	1
1.2	Main Contributions	3
1.3	Thesis Outline	3
	References	4
2	Concrete Industry: Waste Generation and Environmental Concerns	7
2.1	Construction and Demolition Waste	10
2.2	Concrete and Construction Industry: Aggregates Sources	11
2.3	Concrete and Construction Industry: Cement Production	13
	References	15
3	Regulatory Environment and Guidelines for RACs	17
3.1	The Italian Code for Constructions	17
3.2	RILEM Recommendations	18
3.3	DAfStb Guidelines and DIN Standards	18
3.4	British Standards	19
3.5	Buildings Department of the Hong Kong	19
3.6	American Concrete Institute	20
3.7	Cement Concrete and Aggregates Australia	22
3.8	Main Conclusions Drawn from Existing Regulations and Standards	23
	References	25
4	Recycled Concrete Aggregates	27
4.1	State of the Art for Recycled Concrete Aggregates (RCAs)	27
4.1.1	Processing Procedures	27
4.1.2	Attached Mortar Evaluation	29
4.1.3	Engineering Properties of RCAs	31

4.2	Physical and Mechanical Characterisation of RCAs	32
4.2.1	Attached Mortar Content	35
4.2.2	Porosity, Water Absorption and Particle Density	36
4.2.3	Mechanical Strength	39
4.2.4	Bond Strength Between Aggregates and Cement Paste	44
4.3	Alternative Processing Procedures for RCAs	46
	References	52
5	Recycled Aggregate Concretes	55
5.1	Basic Aspects About Concrete Mix Design and Technology	55
5.1.1	The Role of Aggregates in Concrete Mixture	56
5.1.2	Portland Cement	57
5.1.3	Influence of Moisture Content and w/c Ratio	58
5.1.4	Curing Conditions	60
5.2	State of the Art for Recycled Aggregate Concrete (RAC)	62
5.2.1	Workability	62
5.2.2	Compressive Strength	64
5.2.3	Static Modulus of Elasticity	68
5.2.4	Tensile and Flexural Strength	70
5.2.5	Drying Shrinkage	70
5.3	Experimental Activities.	71
5.3.1	Influence of Alternative Processing Procedures on RCAs	72
5.3.2	Influence of the Initial Moisture Condition of RCAs	77
5.3.3	Influence of the Aggregate Replacement and Water to Cement Ratios.	82
	References	87
6	Insights into the Influence of Cement Replacement in Recycled Aggregate Concrete	91
6.1	Fly Ash in Recycled Aggregate Concrete	91
6.1.1	Workability	92
6.1.2	Compressive Strength	92
6.1.3	Alkali-Silica Reaction	94
6.1.4	Carbonation Depth	95
6.1.5	Chloride Ion Penetration Resistance.	96
6.2	Experimental Activities.	98
6.2.1	Mix Composition and Experimental Programme	98
6.2.2	Analysis of the Results	105
6.3	Empirical Relationships for Compressive Strength of RAC+Fly Ash.	114
6.4	Conclusions	117
