Contents

1 Social Networks and Labour–Education Market System .......................... 1
  1.1 Social Networks ........................................................................... 1
    1.1.1 Required Minimum from the Graph Theory ....................... 2
    1.1.2 Creating, Maintaining and Dissolving Social Ties ............. 3
    1.1.3 Structure of Social Networks ........................................... 6
  1.2 Individual Behaviour in the Education Market ............................. 8
    1.2.1 Individual Aspects: Ability, Sex and Personality ............... 9
    1.2.2 Social Environment: Family, Social Class
       and Social Networks ......................................................... 11
    1.2.3 Monetary Costs and Benefits ......................................... 12
  1.3 Individual Behaviour in the Labour Market ................................. 13
    1.3.1 Methods of Job Search and Recruitment ......................... 14
    1.3.2 Overeducation .......................................................... 15
    1.3.3 Quitting the Job ....................................................... 19

2 Complex Adaptive Systems and Agent-Based Modelling ............... 23
  2.1 Why to Use Agent-Based Modelling? ........................................ 23
  2.2 Why to Use Agent-Based Modelling? ........................................ 25
    2.2.1 ...for Modelling Complex Adaptive Systems? ................. 25
    2.2.2 ...If Traditional Economic Modelling Exists? ................. 27
    2.2.3 ...If Other Simulation Methods Exist? ............................ 29
  2.3 How to Do ABM? .................................................................... 33
    2.3.1 From Goal to Implementation ....................................... 33
    2.3.2 Parametrisation and Calibration: Setting Parameters ....... 34
    2.3.3 Validation: Checking the Model .................................... 36
    2.3.4 Running the Model .................................................... 36
    2.3.5 Analysing Output and Its Sensitivity .............................. 37
  2.4 Limitations of ABM ............................................................... 37
## Using Agent-Based Modelling in Studying Labour–Education Market System

### 3.1 Modelling Education Market
- 3.1.1 Modelling the Structure of Education System
- 3.1.2 Modelling the Willingness to Study and the Application Step
- 3.1.3 Modelling the Outcomes of the Willingness to Study

### 3.2 Modelling Labour Market
- 3.2.1 Skipping Firms and the Vacancy Mechanism
- 3.2.2 Adding Firms and the Vacancy Mechanism
- 3.2.3 Modelling Firm Dynamics

### 3.3 Modelling Social Network
- 3.3.1 Adapting a Network Generation Algorithm
- 3.3.2 Defining Tie Creation and Destruction Principles
- 3.3.3 Calibrating the Network Structure

### 3.4 To Embed or Not to Embed?

---
