

Contents

1	Riemannian Metrics	1
1.1	Riemannian Manifolds and Maps	2
1.2	The Volume Form	7
1.3	Groups and Riemannian Manifolds	8
1.3.1	Isometry Groups	8
1.3.2	Lie Groups	10
1.3.3	Covering Maps.....	11
1.4	Local Representations of Metrics.....	12
1.4.1	Einstein Summation Convention.....	12
1.4.2	Coordinate Representations	14
1.4.3	Frame Representations	15
1.4.4	Polar Versus Cartesian Coordinates.....	18
1.4.5	Doubly Warped Products.....	22
1.4.6	Hopf Fibrations	23
1.5	Some Tensor Concepts	26
1.5.1	Type Change	26
1.5.2	Contractions.....	29
1.5.3	Inner Products of Tensors	30
1.5.4	Positional Notation	31
1.6	Exercises.....	32
2	Derivatives	41
2.1	Lie Derivatives	42
2.1.1	Directional Derivatives	42
2.1.2	Lie Derivatives	42
2.1.3	Lie Derivatives and the Metric	48
2.1.4	Lie Groups	50
2.2	Connections	51
2.2.1	Covariant Differentiation	51
2.2.2	Covariant Derivatives of Tensors	57

2.3	Natural Derivations	62
2.3.1	Endomorphisms as Derivations	62
2.3.2	Derivatives	64
2.4	The Connection in Tensor Notation	65
2.5	Exercises	70
3	Curvature	77
3.1	Curvature	77
3.1.1	The Curvature Tensor	78
3.1.2	The Curvature Operator	82
3.1.3	Sectional Curvature	83
3.1.4	Ricci Curvature	85
3.1.5	Scalar Curvature	86
3.1.6	Curvature in Local Coordinates	89
3.2	The Equations of Riemannian Geometry	90
3.2.1	Curvature Equations	90
3.2.2	Distance Functions	95
3.2.3	The Curvature Equations for Distance Functions	97
3.2.4	Jacobi Fields	98
3.2.5	Parallel Fields	101
3.2.6	Conjugate Points	101
3.3	Further Study	103
3.4	Exercises	103
4	Examples	115
4.1	Computational Simplifications	115
4.2	Warped Products	116
4.2.1	Spheres	117
4.2.2	Product Spheres	117
4.2.3	Rotationally Symmetric Metrics	118
4.2.4	Doubly Warped Products	124
4.2.5	The Schwarzschild Metric	125
4.3	Warped Products in General	126
4.3.1	Basic Constructions	127
4.3.2	General Characterization	129
4.3.3	Conformal Representations of Warped Products	132
4.3.4	Singular Points	137
4.4	Metrics on Lie Groups	138
4.4.1	Generalities on Left-invariant Metrics	138
4.4.2	Hyperbolic Space as a Lie Group	141
4.4.3	Berger Spheres	143
4.5	Riemannian Submersions	144
4.5.1	Riemannian Submersions and Curvatures	144
4.5.2	Riemannian Submersions and Lie Groups	147
4.5.3	Complex Projective Space	148
4.5.4	Berger-Cheeger Perturbations	151

4.6	Further Study	153
4.7	Exercises	153
5	Geodesics and Distance	165
5.1	Mixed Partial	166
5.2	Geodesics	170
5.3	The Metric Structure of a Riemannian Manifold	176
5.4	First Variation of Energy	182
5.5	Riemannian Coordinates	186
5.5.1	The Exponential Map	187
5.5.2	Short Geodesics Are Segments	190
5.5.3	Properties of Exponential Coordinates	192
5.6	Riemannian Isometries	196
5.6.1	Local Isometries	196
5.6.2	Constant Curvature Revisited	199
5.6.3	Metric Characterization of Maps	201
5.6.4	The Slice Theorem	204
5.7	Completeness	210
5.7.1	The Hopf-Rinow Theorem	210
5.7.2	Warped Product Characterization	212
5.7.3	The Segment Domain	215
5.7.4	The Injectivity Radius	219
5.8	Further Study	220
5.9	Exercises	220
6	Sectional Curvature Comparison I	231
6.1	The Connection Along Curves	231
6.1.1	Vector Fields Along Curves	232
6.1.2	Third Partial	233
6.1.3	Parallel Transport	236
6.1.4	Jacobi Fields	237
6.1.5	Second Variation of Energy	239
6.2	Nonpositive Sectional Curvature	241
6.2.1	Manifolds Without Conjugate Points	241
6.2.2	The Fundamental Group in Nonpositive Curvature	242
6.3	Positive Curvature	250
6.3.1	The Diameter Estimate	250
6.3.2	The Fundamental Group in Even Dimensions	252
6.4	Basic Comparison Estimates	254
6.4.1	Riccati Comparison	254
6.4.2	The Conjugate Radius	257
6.5	More on Positive Curvature	259
6.5.1	The Injectivity Radius in Even Dimensions	259
6.5.2	Applications of Index Estimation	261
6.6	Further Study	266
6.7	Exercises	266

7	Ricci Curvature Comparison	275
7.1	Volume Comparison	276
7.1.1	The Fundamental Equations	276
7.1.2	Volume Estimation	278
7.1.3	The Maximum Principle	280
7.1.4	Geometric Laplacian Comparison	284
7.1.5	The Segment, Poincaré, and Sobolev Inequalities	285
7.2	Applications of Ricci Curvature Comparison	293
7.2.1	Finiteness of Fundamental Groups	293
7.2.2	Maximal Diameter Rigidity	295
7.3	Manifolds of Nonnegative Ricci Curvature	298
7.3.1	Rays and Lines	298
7.3.2	Busemann Functions	301
7.3.3	Structure Results in Nonnegative Ricci Curvature	304
7.4	Further Study	307
7.5	Exercises	307
8	Killing Fields	313
8.1	Killing Fields in General	313
8.2	Killing Fields in Negative Ricci Curvature	318
8.3	Killing Fields in Positive Curvature	320
8.4	Exercises	329
9	The Bochner Technique	333
9.1	Hodge Theory	334
9.2	1-Forms	336
9.2.1	The Bochner Formula	336
9.2.2	The Vanishing Theorem	337
9.2.3	The Estimation Theorem	338
9.3	Lichnerowicz Laplacians	342
9.3.1	The Connection Laplacian	343
9.3.2	The Weitzenböck Curvature	343
9.3.3	Simplification of $\text{Ric}(T)$	345
9.4	The Bochner Technique in General	347
9.4.1	Forms	347
9.4.2	The Curvature Tensor	348
9.4.3	Symmetric $(0, 2)$ -Tensors	349
9.4.4	Topological and Geometric Consequences	351
9.4.5	Simplification of $g(\text{Ric}(T), T)$	354
9.5	Further Study	358
9.6	Exercises	359
10	Symmetric Spaces and Holonomy	365
10.1	Symmetric Spaces	366
10.1.1	The Homogeneous Description	366

10.1.2	Isometries and Parallel Curvature	368
10.1.3	The Lie Algebra Description	370
10.2	Examples of Symmetric Spaces	376
10.2.1	The Compact Grassmannian	377
10.2.2	The Hyperbolic Grassmannian	379
10.2.3	Complex Projective Space Revisited	380
10.2.4	$SL(n)/SO(n)$	382
10.2.5	Lie Groups	383
10.3	Holonomy	383
10.3.1	The Holonomy Group	383
10.3.2	Rough Classification of Symmetric Spaces	386
10.3.3	Curvature and Holonomy	387
10.4	Further Study	392
10.5	Exercises	392
11	Convergence	395
11.1	Gromov-Hausdorff Convergence	396
11.1.1	Hausdorff Versus Gromov Convergence	396
11.1.2	Pointed Convergence	401
11.1.3	Convergence of Maps	401
11.1.4	Compactness of Classes of Metric Spaces	402
11.2	Hölder Spaces and Schauder Estimates	405
11.2.1	Hölder Spaces	405
11.2.2	Elliptic Estimates	407
11.2.3	Harmonic Coordinates	409
11.3	Norms and Convergence of Manifolds	413
11.3.1	Norms of Riemannian Manifolds	413
11.3.2	Convergence of Riemannian Manifolds	414
11.3.3	Properties of the Norm	415
11.3.4	The Harmonic Norm	418
11.3.5	Compact Classes of Riemannian Manifolds	421
11.3.6	Alternative Norms	424
11.4	Geometric Applications	426
11.4.1	Ricci Curvature	426
11.4.2	Volume Pinching	430
11.4.3	Sectional Curvature	432
11.4.4	Lower Curvature Bounds	434
11.4.5	Curvature Pinching	436
11.5	Further Study	439
11.6	Exercises	440
12	Sectional Curvature Comparison II	443
12.1	Critical Point Theory	444
12.2	Distance Comparison	449
12.3	Sphere Theorems	457
12.4	The Soul Theorem	461

12.5	Finiteness of Betti Numbers	470
12.6	Homotopy Finiteness.....	480
12.7	Further Study	488
12.8	Exercises	488
Bibliography	491
Index	495
