

Contents

1 Nonequilibrium Thermodynamics and Heat Transport at Nanoscale	1
1.1 Memory Effects and Generalized Entropy	2
1.2 Second-Order Nonlocal Effects	6
1.3 Higher-Order Fluxes and Nonlinear Hierarchy of Transport Equations: Ballistic Heat Transport	8
1.4 Nonequilibrium Temperature and Heat Transport	11
1.4.1 Dynamical Temperature	12
1.4.2 Flux-Dependent Absolute Temperature	15
1.4.3 Comparison of Nonequilibrium Temperatures Through Heat Pulse Experiments	16
1.4.4 Propagation of Temperature Waves Along Cylindrical Nanowires	19
References	26
2 Linear and Nonlinear Heat-Transport Equations	31
2.1 The Maxwell-Cattaneo-Vernotte Equation and Heat Waves	32
2.2 The Guyer-Krumhansl Equation and Phonon Hydrodynamics	33
2.3 The Nonlinear MCV and GK Equations	35
2.3.1 Characteristic Dimensionless Numbers for Heat Transport: Approximated Heat-Transport Equation	38
2.4 Other Generalized Heat-Transport Equations	41
2.4.1 The Dual-Phase-Lag Model	41
2.4.2 The Thermomass Theory	43
2.4.3 Anisotropic Heat Transport	45
2.4.4 Two-Population Ballistic-Diffusive Model	46
2.4.5 Effective Medium Approach	48
References	48

3 Mesoscopic Description of Boundary Effects and Effective Thermal Conductivity in Nanosystems: Phonon Hydrodynamics	53
3.1 Phonon Slip Flow	55
3.2 Size Dependence of the Effective Thermal Conductivity	59
3.2.1 Nanowires with Circular Cross Sections	60
3.2.2 Nanowires with Elliptical Cross Sections	63
3.2.3 Core-Shell and Tubular Smooth-Walled Nanowires	65
3.2.4 Thin Layers and Nanowires with Rectangular Cross Sections	67
3.2.5 Thin Channels Filled with Superfluid Helium.....	69
3.3 Phonon Backscattering and Roughness Dependence of the Effective Thermal Conductivity	70
3.3.1 Roughness Dependence of the Wall Coefficients	72
3.3.2 Effective Phonon Mean-Free Path and Nonlocal Effects	74
3.3.3 Phonon Backscattering and Conductor-Insulator Transition.....	76
3.3.4 A Qualitative Microscopic Interpretation of C' and α'	79
3.4 Phonon-Wall Interactions and Frequency-Dependent Thermal Conductivity in Nanowires	83
References	85
4 Mesoscopic Description of Effective Thermal Conductivity in Porous Systems, Nanocomposites and Nanofluids	91
4.1 Pore-Size Dependence of the Effective Thermal Conductivity	91
4.1.1 Results from Classical Fluid-Dynamics: The Correction Factors	94
4.1.2 Theoretical Thermal Conductivity of Porous Silicon	95
4.1.3 An EIT Approach	99
4.1.4 Microporous Films	99
4.2 Nanocomposites, Superlattices and Nanofluids	100
4.2.1 Thermal Conductivity of Nanocomposites	101
4.2.2 Thermal Conductivity of Superlattices	102
4.2.3 Thermal Conductivity of Nanofluids	103
References	105
5 Weakly Nonlocal and Nonlinear Heat Transport	109
5.1 Flux Limiters and Effective Thermal Conductivity of Short Carbon Nanotubes	109
5.2 Thermal Rectification in Tronco-Conical Nanowires	114
5.3 Axial Heat Transport in Thin Layers and Graphene Sheets.....	118
5.3.1 Nonlocal Heat Transport and Steady-State Temperature Profile in Thin Layers.....	120
5.3.2 Thermodynamic Aspects: Second Law at the Mean-Free Path Scale	125
5.4 Stability of the Heat Flow in Nanowires	128
References	130

Mesoscopic Theories of Heat Transport in Nanosystems

Sellitto, A.; Cimmelli, V.A.; Jou, D.

2016, XIX, 170 p. 32 illus., 29 illus. in color., Hardcover

ISBN: 978-3-319-27205-4
